	NAVAL HOSPITAL

INTRODUCTION

OBJECTIVE

A Master Plan for the development and utilization of the Camp Lejeune Area, Marine Corps Base was requested by the Commandant of the Marine Corps by C. M. C. letter A04K-ND-14 of 8 June 1967.

The task of preparing the Master Plan was assigned to the Commander, Atlantic Division, Naval Facilities Engineering Command. Contract No. N62470-67-C-1102 was awarded to the Architectural Firm of A. G. Odell, Jr. and Associates to prepare and develop the Master Plan from information furnished them by the Activity and by Atlantic Division, Naval Facilities Engineering Command.

The final plan, after C. M. C. approval, will be the supporting document for any Military construction program line item or, as appropriate, for the development and utilization of unimproved areas and disposition of land areas determined to be excess.

SCOPE

This Master Plan encompasses all of the facilities at the Marine Corps Base, Camp Lejeune, North Carolina, with the exception of the Marine Corps Air Station (Helicopter), New River, and Family Housing, the Master Plan Study consists of 3 parts:

Part I - Text
Part II - Statistics
Part III - Maps

The text describes the Activities and Commands at Camp Lejeune and presents background information relative to the growth and development of the Base. Existing conditions and area considerations are outlined along with major problems. A summary and planning analysis of recommendations describes the plan of development and implementation of the Master Plan.

ACTIVITY AND LOCATION: Marine Corps Base, Camp Lejuene, North Carolina | ACTIVITY CODE: 8270-175 | NAVAL DISTRICT OR AREA: 5 ND | INITIAL ISSUE [X] REVISED CHANGE NO. | 1 OCTOBER 1968

CATEGORY CODE	BUILDING NUMBER	PROPERTY RECORD CARD	CURRENT USE	DESIGNED USE	USING ACTIVITY	TYPE CONSTR.	CONDITION CODE	UNIT OF MEAS.	QUANTITY OF ASSETS: TOTAL	QUANTITY OF ASSETS: VACANT	QUANTITY OF ASSETS: SUB-STANDARD	REMARKS
1	2	3	4	5	6	7	8	9	10	11	12	13

1. Requires rewiring and lighting to bring up to acceptable standards.
2. Substandard on basis of lack of air conditioning.
3. Requires rewiring, lighting, and ventilation to bring up to acceptable standards.
4. Beyond economical repair.
5. Acoustics materials needed to make building suitable for use.
6. Building lacks sufficient space to carry on designated purpose.
7. Requires heating to bring up to acceptable standards.
8. Facility is not suitable for its present use because of its general poor condition.
9. Facility lacks adequate ventilation.
10. Inadequate existing air conditioning requiring increase in capacity or installation of central system.
11. Inadequate due to very poor plumbing and electrical systems.
12. Facility is substandard due to the need for repair of either the floor, the roof, or the walls.
13. Facility is substandard due to the need for repair of either the floor, the roof, or the walls, along with need for rewiring.
14. Building is inadequate becuase the layout of the building, as well as the existing facilities, are not suitable for the present use of the building.
15. Building lacks adequate plumbing facilities.
16. Building lacks adequate head and plumbing facilities.
17. All these helicopter landing pads are unpaved except for a concrete cross to mark the site imbedded in the ground. The cross has an area of 69 SY. The remaining area is turf.

Supersedes OPNAV FORM 11000- for Marine Corps Use. *Reference: Current edition of MCO 11010.12*

25. REQUIREMENT FOR LINE ITEM

Facility Planning factors in NAVDOCKS P-80 allow the 2d Marine Division 18,626 SF for weapons maintenance. The Division occupies 11,545 SF in Building 1828 which is substandard because of insufficient floor space, inadequate lighting, inadequate electric service and general poor condition of the building. The building is metal, uninsulated, and poorly heated. This facility provides maintenance support for approximately 25,000 ordnance items. Many of these items require scheduled quarterly and annual serviceability checks. Frequency of repairs average approximately 950 of these weapons per month which includes artillery weapons. Second echelon for the 10th Marines and third echelon maintenance for 2d Service Battalion will be accomplished in the facility.

(1) A semi-clean environment is required for the cleaning and repairing of fire control and optical equipment.

(2) The maintenance of artillery weapons requires each weapon to be detail stripped. The lack of sufficient floor space restricts simultaneous tear-down of more than two at any time.

(3) Additional floor spaces are required for a machine shop, and a welding shop to support this program.

P-137	WEAPONS MAINTENANCE FACILITY, 2ND MARINE DIVISION (HADNOT POINT)

LINE ITEM FACILITY STUDY - PART I - WEAPONS MAINTENANCE FACILITY - 2ND MARINE DIVISION

1. General:

a. The Weapons Maintenance Facility (third echelon) is intended to provide a third echelon weapons maintenance facility to the Second Marine Division by providing a modern equipped structure of steel and masonry construction on concrete slab of the type presently being built at Camp Lejeune, plus concrete and bituminous hard standing for those tracked and wheeled ordnance vehicles of the various units of the Second Marine Division undergoing and awaiting third echelon maintenance.

b. The NAVDOCKS P-80 does not establish planning criteria for the development of a weapons maintenance facility for the type of weapons employed by a Marine Division. To provide for a facility of ample size in productive work area with adequate direct and indirect support areas for the performance of third echelon maintenance of all the weapons for the Second Marine Division, it is determined that the minimum productive work area required is 11,586 square feet, with direct and indirect support areas of 7,050 square feet. The total of 18,636 square feet should be considered as the minimum planning factor for this facility. These requirements are calculated on several factors:

(1) The total weapons population (infantry weapons, fire control and optical instruments, and artillery) of the Second Marine Division which would require repair.
(2) The frequency of repairs based on past history records and projected annual and semi-annual maintenance requirements on tracked weapons and artillery pieces.
(3) The length of time in shop required for the repair of weapons.
(4) Security requirements for small arms weapons during maintenance.
(5) Lead time of parts availability.
(6) The table of organization (T/O) for ordnance weapons repair men authorized the Second Service Battalion.

c. In addition to covered working space, parking space is required for tracked and wheeled (mobile) ordnance weapons requiring third echelon maintenance. NAVDOCKS P-80 prescribes the method to be used in calculating the parking area requirements for organizational wheeled vehicles. This method provides an area of 40 square yards per vehicle for 75% of the total amount of vehicles rated by the organization. Using a factor of 10% deadline rate for the tracked and wheeled ordnance vehicles in the Division, and applying the NAVDOCKS P-80 factor of 40 square yards of parking hard stand per vehicle a total of 405 square yards of hard stand is required. Of this total, 189 square yards of concrete hard stand (Category Code 852-10) to support up to and including a 50 ton tracked vehicle is required, and 216 sq yds. of bituminous hard stand (Category Code 852-11) is required.

d. The weapon population of the Second Marine Division is as follows:

(1) Population:

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 6 DEC 1968	1970		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE	
P-137	WEAPONS MAINTENANCE FACILITY, 2ND MARINE DIVISION	(HADNOT POINT)

(a)	Infantry weapons (includes rifles, pistols, 106RR, 81MM and flame throwers)	22,066
(b)	Fire control and optical instruments	2,604
(c)	Artillery (includes tracked self-propelled, towed pieces and Ontos)	135

(2) Frequency of repairs:

(a)	Infantry weapons	700/Month
(b)	Fire control and optical instruments	200/Month
(c)	Artillery	30/Month

2. Requirements:

a. The Second Marine Division weapon maintenance facility shall have certain general construction features. These are:

(1) Electrical: Three phase 110/220 volt 60 cycles per second power. Outlets should be placed at convenient locations throughout the structure. 110 volt electrical receptacles should be placed at each workbench. A complete electrical grounding system is required throughout.

(2) Lighting: Fluorescent lighting shall be utilized throughout. Each workbench shall have a fluorescent bench lamp. Natural lighting (i.e. skylights, windows, etc) shall be utilized to the maximum extent possible. Floodlights are required in parking areas.

(3) Heating: Central Heating shall be utilized throughout.

(4) Air Conditioning: Temperature - Humidity control is required in the optical equipment repair shops and administrative work spaces.

(5) Inter-Office Communications: Intercom system in all work spaces and administrative spaces.

(6) Compressed Air: Outlets shall be placed at convenient locations and at all workbenches in the tracked and wheeled weapon repair areas.

(7) Telephones: Sufficient telephones shall be installed in all administrative work spaces.

(8) Floors: Reinforced concrete floors shall be constructed throughout. Floor in the tracked weapon repair bays shall be reinforced concrete, capable of supporting a 50 ton tracked weapon.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 6 DEC 1968	1970		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-137	WEAPONS MAINTENANCE FACILITY, 2ND MARINE DIVISION (HADNOT POINT)

(Cont'd)

(9) Air Exhaust System: A system by which exhaust fumes may be dispersed shall be installed in the tracked weapon repair bays.

(10) Work Benches: Work benches shall be built in. They are required in small arms repair shops and tracked weapons repair bays.

(11) Interior Walls: Lath and plaster or plaster board throughout, wood panel doors with interior hinges.

(12) Ceilings: Acoustical tiling with asbestos insulation shall be utilized in direct and indirect support areas.

(13) Security: Interior and exterior security lighting required.

(14) Plumbing: Hot and cold running water is required in head/locker area. Cold running water only is required in all maintenance shops, and for the automatic sprinkling system and fire hose facilities.

(15) Steam: Wet steam shall be provided in the tracked weapon repair bays.

(16) Working Spaces:

(a) Tracked Weapon Repair Shop (10 Bays): The tracked weapon repair shop shall contain an overhead lubrication unit, at least three 2½ ton overhead cranes, compressed air outlets, 110/220 vac electrical outlets at convenient locations, a waste oil sump, overhead doors on both sides of the shop, a parts cleaning facility. One bay area, preferably corner bay, should have individual work bench space with fluorescent lighting for a component rebuilding section. Intercommunication system with main office is desired. It is imperative that the concrete floor be capable of supporting a 50 ton tracked vehicle.

(b) Wheeled Weapon Repair Shop (Towed Artillery)(8 Bays): The artillery weapon repair bays shall contain at least three 2½ ton overhead rail cranes capable of traversing all 8 bays. 110/220 vac electrical outlets, work bench space, fluorescent lighting throughout bays, overhead doors on both sides of bays. The floor should be capable of supporting a 50 ton vehicle since towed artillery may be replaced by heavier tracked artillery in the future.

(c) Small Arms Repair Shop (Less Crewserved Weapons) (1250 SF): The small arms repair shop should contain fluorescent lighting throughout work bench facilities with individual fluorescent bench lamps, wood panel doors with interior hinges, an overhead door, 110 vac electrical outlets at each work bench and at convenient locations and central communication with maintenance office.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-137	WEAPONS MAINTENANCE FACILITY, 2ND MARINE DIVISION (HADNOT POINT)

(Cont'd)

(d) Security Area-Small Arms Repair Shop (500 SF): The small arms security area shall provide an enclosed room with one entrance door of solid steel construction or heavy gage wire mesh, fluorescent lighting, work bench space, racks for storage of weapons, and 110 vac electrical outlets at convenient locations and humidity control.

(e) Optical Equipment Repair Shop (20' x 30'): The optical equipment repair shop shall contain central air conditioning and dehumidifying system, security storage lockers, contain fluorescent lights throughout, work bench space with individual fluorescent bench lamps, 110 vac electrical outlets, and an inter-communications system with the maintenance office.

(f) Small Arms Repair Shop-Crewserved Weapons (6 Bays): The small arms crewserved weapons repair shop shall contain adequate fluorescent lighting throughout work bench space with individual fluorescent bench lamps, 110 vac electrical outlets, and one overhead crane with 2½ ton capacity.

(g) Maintenance Control Space (1800 SF): The maintenance control space shall contain fluorescent lighting throughout, adequate telephone receptacles, an inter-communications system to all work bays and storage areas, sufficient 110 vac electrical outlets to operate numerous office machines, central air conditioning, and acoustical walls and ceiling materials.

(h) Tool Room (500 SF): The tool room shall contain 110 vac electrical outlets in convenient locations, adequate shelving for storage of tool boxes, and fluorescent lighting.

(i) Repair Parts Storage Room (600 SF): This parts room shall provide adequate shelving for storage of parts (3d echelon) 110 vac electrical outlets in convenient locations, and fluorescent lighting.

(j) Maintenance Float Storage Room (300 SF): The maintenance float storage room shall contain 110 vac electrical outlets in convenient locations, adequate shelving to store maintenance float weapons and parts, fluorescent lighting and humidity control.

(k) Ordnance Maintenance Office (500 SF): The ordnance maintenance office shall contain fluorescent lighting, 110 vac electrical outlets in convenient locations, inter-communications system with ordnance shops, adequate telephone receptacles for maintenance office, and central air conditioning.

(l) Maintenance Administrative Area (20' x 25'): The maintenance administrative area shall contain fluorescent lighting, 110 vac electrical outlets in convenient locations, inter-communications system with shops and maintenance office, acoustical wall and ceiling materials and air conditioning.

(m) Head and Locker Room (20' x 30'): 110 vac electrical outlets in convenient locations, fluorescent lighting, hot and cold running water and wash basins.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 6 DEC 1968	1970		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-137	WEAPONS MAINTENANCE FACILITY, 2ND MARINE DIVISION (HADNOT POINT)

(Cont'd)

(17) Outside Area:

(a) Washing Area Shall Have: Hard standing (bituminous and concrete), high pressure water, steam cleaning facilities, deck drains and wash racks.

(b) Security Lighting to Include: Light poles, lighting transformers, weatherproof electrical receptacles and control devices.

(c) Loading/Unloading Ramps Shall Be: Capable of supporting 50 ton tracked ordnance vehicle.

(d) Approach Ramps: Concrete approach ramps to tracked vehicle hard stand, capable of supporting 50 tons should extend to adjacent concrete roads. All other approach ramps should be of bituminous materials.

3. Justification:

a. The proposed third echelon weapons maintenance facility is required to provide an adequate faciltiy for the performance of third echelon maintenance on all of the Second Marine Divisions weapons authorized by the table of equipment (T/E).

b. The buildings presently being utilized by the Second Service Battalion for third echelon maintenance of weapons are two "Butler Buildings", built in 1952. They have the following insufficiencies.

(1) Space: Bench space is limited and inadequate. The parts and tool rooms are small and cramped, repair areas have no overhead lifts in the tracked and wheeled weapon repair bays, and are too small to disassemble more than one artillery piece at a time.

(2) Power: Power facilities are inadequate for transmission of power. The buildings have no grounded electrical system. 110 vac outlets are insufficient in number.

(3) Lighting: Lighting is inadequate in most of the working and storage areas. No bench lamps are available for small arms and crewserved weapons repairs.

(4) Heating: Heating is by kerosene space heaters which fail to provide heat and are a fire/safety hazard.

(5) Ventilation: No ventilation system exists. Ventilation is insufficient, causing a safety hazard.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 6 DEC 1968	1970		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-137	WEAPONS MAINTENANCE FACILITY, 2ND MARINE DIVISION (HADNOT POINT)

(Cont'd)

(6) Steam Facilities: Steam facilities are non-existent.

(7) Plumbing Facilities: One cold water faucet exists in the entire building for washing and other requirements. No head facilities are available in the immediate area.

(8) Building (General): The building is uninsulated throughout, with no ceiling cover. Sliding doors are spaced too far apart consequently resulting in a large volume of dead space between doors in work area.

4. Summary:

The present weapons maintenance facility (third echelon) is inadequate to handle the present work load of the entire Second Marine Division. Deadline times are high due to the inadequacies listed in paragraph 3, and will remain high until the situation is rectified. The proposed third echelon weapons maintenance facility offers the most complete solution to the problem.

24. RELATED LINE ITEMS

25. REQUIREMENT FOR LINE ITEM

The 3d Echelon Electronic Maintenance Facility provides maintenance for 8,422 communication and electronic items which are currently used by the 2d Marine Division. An average of 404 of these items require maintenance or repair each week. The present work areas and benches are so crowded that items being repaired interact with one another. There is nospace for repair of vehicular mounted equipment indoors. Lack of environmental control requires frequent calibration and repair of electronic test equipment and limits its use. Requirements for 400 cycle power exceed the present supply. The 2d Division uses, for 3d echelon electronic maintenance shop, 4103 square feet of a structure originally designed as to communications warehouse. The building is in poor condition and environmental control for the electronic equipment is impossible. There is no interior space for repair of vehicle mounted radios so the repairs must be done outdoors with the danger of electrocution greatly increased.

LINE ITEM FACILITY STUDY - PART I - ELECTRONICS MAINTENANCE SHOP, 2D MARINE DIVISION

1. Description: Provide a building with steel frame and masonry construction, concrete floor, overhead door for vehicular communications equipment and built-up roof. The facility must provide space for the following maintenance and support functions: administrative space, shipping and receiving, shop stores, maintenance float, radar/test equipment repair, telephone/teletype repair, crypto repair, library research room,maintenance room, head/showers/locker facility, battery room, single sideband repair shop, single sideband (SSB) drive-in shop, portable vehicular drive-in shop, general communications repair room, shop stores (repair parts), mount-out supplies storage area, covered outdoor storage area for vehicular maintenance vehicles.

a. General requirements:

(1) Lighting: Fluorescent throughout except for: plant maintenance room; utility room; head; portable bench lamps (fluorescent) required at shop benches; flood lights for space between wings and at entrances.

(2) Air conditioning (temperature and humidity control) required in all spaces except: SSB drive-in shop; utility room; battery room.

(3) Heating required for all spaces.

(4) Windows not required except in offices.

(5) Interior walls can be heavy screen type (cyclone fence) except to block off air conditioning spaces and the following: office; crypto-metal door, internal hinges, tamper-proof clasp, masonry block walls throughout; radar/test equipment repair requires electro-magnetic shielding; utility room; head; battery room; SSB shop requires electro-magnetic shielding.

(6) Intercom system in all spaces, master boxes in office and shipping/receiving, slaves in other spaces.

(7) Electrical grounding system available in all shop spaces.

(8) In rear of building between wings, require four outlets (screw terminal type) for 3 phase, 400 cycle, 220 volt current.

(9) In rear of building outside of each wing, in semi-enclosed space, require one weather-proof, double 110 volt, 60 cycle, single phase outlet.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 6 DEC 1968	1970		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-133	ELECTRONIC MAINTENANCE SHOP - 2D MARINE DIVISION (HADNOT POINT)

(Cont'd)

(10) Work benches, built-in, required in all shop spaces.

(11) Hardstand space, in rear, between wings should be roofed over.

(12) Area immediately surrounding building should be asphalt hard-stand.

b. Specific Requirements of individual spaces:

(1) Portable drive-in shop: overhead vehicle door, one end, 20 feet vertical clearance throughout drive way; overhead trolley lift, 100,000 lb. capacity; 115 volt, 60 cycle AC power, single phase power; 220 volt 400 cycle, three phase power, adjustable 0 to 50 volt DC power; compressed air outlet; vehicle exhaust system; feed through walls.

(2) Telephone/teletype shop: 400 cycle, single phase, 110 volt power; 60 cycle, single phase, 110 volt power; 0-50 volt DC power; compressed air outlet.

(3) Cryptographic Repair Shop: 60 cycle single phase 110 volt power; 110 volt, 400 cycle single phase power; compressed air outlet.

(4) Office, Shipping and Receiving: shop stores, maintenance float, plant maintenance, head, library. All require only 60 cycle, 110 volt single phase outlets.

(5) Battery Shop: exhaust system; all electrical systems to be of "non-sparking" construction; stainless steel sink with cold water and drain; shower head, in wall or overhead, and floor drain, cold water only; 60 cycle, 110 volt, single phase power; compressed air outlet.

(6) Single Sideband Shop: 110 volt, 40 cycle, single phase power; 110 volt, 60 cycle, single phase power; two, screw terminal type outlets for 220 volt, 400 cycle, 3 phase power; 0-50 volts DC power; compressed air outlet; feed through connections (2 or 3) for antennas through outside walls; screw terminal outlet-110 volt, 60 cycle- 3 phase power; hot and cold water faucet and deep sink required.

(7) Single Sideband Drive-in Shop: 110 volt, 60 cycle, single phase power, 220 volt, 400 cycle, three phase, with screw-type terminal outlets; 0-50 volt DC power; 110 volt, 400 cycle, single phase power; compressed air outlet; feed-through connections for passing antenna cables through walls; exhaust blower system with hoses for vehicle exhaust; overhead trolleylift, 10,000 lb capacity; overhead vehicle doors each end, minimum drive-through clearance 15 feet.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 6 DEC 1968	1970		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-133	ELECTRONIC MAINTENANCE SHOP - 2D MARINE DIVISION (HADNOT POINT)

(Cont'd)

b. The present 3d echelon maintenance facility is located in building 1707 and is a substandard temporary building which is not designed for the maintenance of costly electronics equipment. It is a building which is inadequate for the following reasons:

(1) Insufficient Space:

(a) Bench space is so restricted that electronic items being repaired interact with one another. This often requires halting work on one item until another has been repaired. The lack of bench space also complicates the testing and trouble shooting work conducted on benches.

(b) No interior space for the repair of vehicular mounted radios. This forces severe limitations on this work. It can only be accomplished outside in clear, dry weather because of the electrocution hazard associated with such equipment.

(2) Lack of Environmental Controls:

(a) The building cannot be properly heated in the winter and humidity control and air conditioning are non-existent. The type of construction precludes the installation of an adequate heating and air conditioning system for this facility.

(b) Environmental changes effect the performance of electronic test equipment. Lack of such controls require the frequent calibration of such equipment, and because environmental changes can be expected to make great differences in their performance, limits its use.

(c) Environmental controls are also required for the proper storage of miniaturized communications equipment.

(3) Insufficient Power:

(a) Available 400 cycle power is barely adequate to handle the existing workload. Requirement for this power is increasing as new families of electronic equipment are introduced.

(b) Fluctuation free 28-volt DC is not now available required for transistorized equipment.

(4) Summary: The insufficient space, environmental conditions and the insufficient power all contributes to extremely poor working conditions with the result of poor maintenance and a high dead-line rate for communications equipment.

(5) No criteria for Electronics Maintenance facilities is given in NAVDOCKS P-80. In order to take an analytical approach to the space requirements for facilities in this category, a set of criteria for Comm/Elect equipment was developed. This criteria is based on the best estimate of experienced maintenance personnel in the 2d Marine Division. The details of the criteria developed and the

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 6 DEC 1968	1970		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-133	ELECTRONIC MAINTENANCE SHOP - 2D MARINE DIVISION (HADNOT POINT)

(Cont'd)

requirements for the 15,000 SF of space for this facility are the subject of an additional submission for the Construction Program.

5. The 8422 items of communications equipment authorized this division is required to command and control the divisional units under combat conditions. Without adequate communications, the effectiveness of the Division is reduced. It is extremely important that this Marine Division be combat ready for movement on short notice. The money allocated for communications equipment, repair parts, and technicians is an indication of the importance of this material for combat units. To insure that this equipment is in a ready state of repair, adequate facilities for its proper maintenance are required. The present facilities are completely inadequate as noted above.

The division dead-line for communications equipment is high, and will continue to be until adequate facilities are provided to maintain it. By providing the proposed facility, the division will have the capability to repair and store the communications equipment it needs to maintain a state of readiness in support of national contingency plans. Without this adequate support facility, the division will be severely limited in its electronic maintenance capability, which directly affects its combat ready status.

4. Justification:

a. The proposed 3d echelon Electronics Maintenance Shop is required to provide the Service Battalion, 2d Marine Division, an adequate facility for the repair of 8,422 end items authorized within the Division Tables of Equipment. In addition to the repair of end items, components of these items, i.e., receiver-transmitter units, control units, power supplies, etc., must be repaired. The repairs of modular equipment; printed circuit boards of modules; alignment of communications equipment and the repair of all test equipment within the inventory of the Division will be repaired and maintained in this facility. An average of 405 of these items arrive into this shop each week for maintenance.

This project proposes a 24-chair Dental Clinic as shown on Y&D Drawing No. 817099, Department of the Navy, Bureau of Yards & Docks Definitive Designs for Naval Shore Facilities. Construction shall feature structural concrete floor and foundation with crawl space, masonry walls and partitions with brick veneer on exterior to conform to existing design of surrounding buildings.

25. REQUIREMENT FOR LINE ITEM

A need exists for a consolidated Dental Clinic for the Marine Division Areas in order to provide the requisite dental service for the maintenance of a minimum level of dental health commensurate with the combat readiness of Marine and Naval personnel housed in the Marine Division Areas of Camp Lejeune. Construction of such a facility will consolidate the existing widely separated dental operating spaces, making available urgently needed space in existing medical facilities, precluding costly additions. The 26 dental officers and 44 technicians providing dental treatment to personnel of the Marine Division operate in 7 widely scattered locations. There are 5 separate operative clinics, 4 dental spaces in the Base Dental Clinic for prosthodontics, a dental storeroom and 3 offices in an administrative building. The 20 dental operating rooms in the area medical Dispensaries are inadequate for providing dental procedures. Ten of these rooms were formerly laboratories and the remaining 10 are of substandard size. Waiting rooms and appointment desks are, through necessity, located in narrow crowded passageways. Further, the spaces now occupied in the Dental Clinics are needed by the Division medical officers. The lack of dental standards for enlistment and time for dental treatment during recruit training accounts for the fact that the majority of personnel

(Cont'd)

reporting to this Division need extensive dental treatment. Each clinic and the prosthodontic facility continually have a list of patients awaiting treatment. It is estimated that a consolidated Dental Clinic for this Division would increase the treatment by approximately 35 percent. This would be brought about by consolidation of facilities and more efficient utilization of available dental personnel. The proposed building will provide a dental surgical operating suite, prosthetic operating rooms, a prosthetic laboratory, a central stores and issue room, a dental X-ray suite and dental equipment repair service; all of which are currently obtained from already overloaded Marine Corps Base facilities. Service will be additionally improved through increased efficiency of such consolidation and result in a considerably more economical operation. The proposed structure will be one-story in height, complementing the existing structures in the area.

P-006	DENTAL CLINIC (HADNOT POINT)

LINE ITEM FACILITY STUDY - PART I

1. A need exists for a consolidated dental clinic for the 2d Marine Division in order to provide the requisite dental service for the maintenance of a minimum level of dental health commensurate with the combat readiness of Marine and Naval personnel housed in the 2d Marine Division Areas of Camp Lejeune. Construction of such a facility will consolidate the existing widely separated dental operating spaces, making available urgently needed space in existing medical facilities, precluding costly additions. The 26 dental officers and 44 technicians providing dental treatment to personnel of the 2d Marine Division operate in seven widely scattered locations. There are five separate operative clinics, four dental spaces in the Base Dental Clinic for prosthodontics, a dental storeroom and three offices in an administrative building. The 20 dental operating rooms in the area medical dispensaries are inadequate for providing dental procedures. Ten of these rooms were formerly lavatories and the remaining ten are of substandard size. Waiting rooms and appointment desks are, through necessity, located in narrow, crowded passageways. Further, the spaces now occupied in the Dental Clinics are needed by the Division medical officers. The lack of dental standards for enlistment and time for dental treatment during recruit training accounts for the fact that the majority of personnel reporting to this Division need extensive dental treatment. Each clinic and the prosthodontic facility continually have a list of patients awaiting treatment. It is estimated that a consolidated Dental Clinic for this Division would increase the treatment by approximately 35 percent. This would be brought about by consolidation of facilities and more efficient utilization of available dental personnel. The proposed building will provide a dental surgical operating suite, prosthetic operating rooms, a prosthetic laboratory, a central stores and issue room, a dental X-Ray suite and dental equipment repair service; all of which are currently obtained from already overloaded Marine Corps Base facilities. Service will be additionally improved through increased efficiency of such consolidation and result in a considerably more economical operation. The proposed structure will be one-story in height, complementing the existing structures in the area. Y&D Definitive Drawing No. 817099 provides a building for 24 dental chairs. The building may be expanded to provide for a total of 28 chairs if the demand for chair space requires. The building will be constructed with masonry walls and partitions with brick veneer facing to conform to adjacent architecture; one story with concrete floor and crawl spaces. Building will be air conditioned. The current estimated cost of construction is approximately $318,000.

2. The need for the 2d Division Dental Clinic is based on the tabulations below of the existing facilities and requirements of the entire Marine Corps Base. It is noted that application of the established criteria would permit a total of approximately 40 dental chairs for 2d Division. It is believed that construction of a consolidated Dental Clinic in the 24-28 chair range will substantially satisfy the requirement due to increased efficiency and reduction in non-productive time.

b. Statement as to why existing facilities cannot continue to be used, modernized, or expanded to meet requirements:

Continued usage of existing facilities will prolong the existing unsatisfactory conditions. Building numbers 119, 221, 324, 421, 520, BB-10 and RR-12 were originally constructed in 1942 and 1943 as Dispensaries with identical floor plans which provided a total of 212 square feet for dental operations. On the basis of present criteria of 138 SF per dental operating room, this provided insufficient space for two DOR's. Over the course of the years each of the Division Area buildings has been modified to provide four DOR's in each building. These modifications were made by conversion of toilet, waiting room and other space to DOR's. Further expenditure of funds to modify these buildings is considered uneconomical since this would not provide corrective action concerning the dispersion of dental effort. The 2d Division dental effort is now dispersed in six widely separated buildings.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-006	DENTAL CLINIC (HADNOT POINT)

(Cont'd)

Construction of a Division Dental Clinic will consolidate this effort and permit economical usage of dental personnel with resulting increase in quantity, if not also the quality of dental work performed.

c. The estimate of requirements is based on the following number of personnel entitled to dental care at government expense, living in the area served by this facility:

		Average Strength Last 12 Months	Current Strength	Programmed Strength
Military Personnel (Marine Corps)	MCB	8,293	10,335	
	2d Mar Div	18,014	18,025	
	Force Troops	7,537	7,798	
		33,844	36,158	33,844
Military Personnel (Navy)	MCB	185	187	
	2d Mar Div	790	869	
	Force Troops	100	201	
		1,075	1,257	1,075
Retired Personnel		Unk	400	N/A

Source of figures shown herein and date programmed strength anticipated: The military figures were derived from the records of the 2d Marine Division, Force Troops, and Marine Corps Base. Since there are no known programmed strength increases or decreases, the average personnel figures for the past year appear to be a suitable estimate. The retired personnel figure is derived from the records of the U. S. Naval Hospital, Camp Lejeune.

d. The total number of dental operating rooms required for the Marine Corps Base is calculated as follows: From the above figures, the known average military strength for the last 12 months was 34,919; 400 retired personnel added gives a total of 35,419. The criteria for planning Dental Clinics listed in Appendix E to Enclosure (3) to Marine Corps Order 11010.12 of 27 April 1962 shows a tabulation of maximum strength served as 15,000 with 34 dental operating rooms allowed. In this tabulation the DOR's increase at the rate of two DOR's per 1,000 strength served in the range of 10,000 to 15,000 strength served. On the basis of this table, the allowable criteria for the Marine Corps Base is 68 DOR's for the first 30,000 strength and two additional DOR's for each 1,000 of the remaining 5,419 strength, or 10 additional DOR's, for a total requirement of 78 DOR's.

e. Available dental operating rooms in existing facilities of Marine Corps Base to be continued in use:

Rifle Range RR-12	Base	0	1 secured - not in use
Camp Geiger TC-846	Base	2	No change
	Force Troops	1	No change
	Total	35	

f. Net requirement of dental operating rooms for new construction:

Total Requirement	78 DOR's
Existing - to be continued in use	35
Net requirement for new construction	43 DOR's

3. The dental collateral equipment to be installed and provided is listed on Y&D Definitive Drawing No. 817099.

4. Existing dental facilities are located in several buildings which were designed, built, and are presently in use as Dispensaries. These buildings will continue to serve as Dispensaries. After completion of the proposed Dental Clinic, the dental equipment will be removed from these various buildings and disposed of as surplus property in accordance with supply procedures.

5. In the event that the proposed Dental Clinic is not constructed, the result will be the continuation of the existing crowded conditions in individual buildings, continued dispersion of the dental effort, with resulting inefficiencies.

25. REQUIREMENT FOR LINE ITEM

This line item is required to facilitate automatic data processing equipment necessary to proficiently perform current and planned workloads. Estimates of anticipated ADP workload at this Command by FY-1970 indicate processing requirements in excess of 720 hours. In accordance with Secretary of the Navy's policy, as stated in SecNavIst 10462.7B, this workload should be accomplished within 200 metered hours of Computer time. The existing facility houses an IBM System 360 Model 30F with random access and magnetic tape processing capability. An IBM System 360 Model 501 will replace the model 30F necessitating an increase in floor space, air conditioning and electrical power requirements. Space also will contain a 1401 System. This planned line item will enable this Command to accomplish its assigned mission and tasks in support of Marine Corps Operating Forces and Headquarters Marine Corps, and ensure economical utilization of allocated resources. If this line item is not approved, the existing computer will continue in use but will not be able to assimilate the anticipated increased workload requirements. Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable. This item will not cause additional air/or water pollution.

25. REQUIREMENT FOR LINE ITEM

The existing combat vehicle maintenance shops of the 2nd MarDiv are scattered over a wide area. The majority of these facilities were constructed during, or prior to, World War II, and others, Butler type buildings, built during the Korean campaign for short term use. All are substandard, particularly as vehicles and weapons become more sophisticated. Each 2nd MarDiv unit is required to maintain its equipment in a combat ready condition. Second echelon maintenance is an important part of this effort and involves organizational maintenance, repair, and replacement of major parts. The length of time vehicles are deadlined is abnormally high, and will remain so until adequate shops are provided. Without the proposed shops, the 2d MarDiv units will be hamstrung by its inadequate 2d echelon maintenance capability and its operational readiness will continue to be greatly impaired. This line item will satisfy the requirements for 2d echelon maintenance facilities for the maintenance of combat equipment and vehicles assigned to Hqd.Bn., 1st Bn, 2d Bn, and 3rd Bn of the 10th Marine Regiment. This item will not cause additional water pollution. The air pollution caused by this time will be abated in accordance with Executive Order No. 11282 by corrective measures included as part of this line item. Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable.

LINE ITEM FACILITY STUDY, PART I - COMBAT VEHICLE MAINTENANCE FACILITY (2d ECHELON), 2d MARINE DIVISION

1. General:

a. The combat vehicle maintenance facility (2d echelon) which is programmed for fiscal year 1971 is intended to provide a second echelon maintenance facility to each of the individual units of the Tenth Marine Regiment (less Fourth Battalion, Tenth Marines), by providing 3 modern equipped structures of steel and masonry construction of the type presently being built (ie: brick exterior and concrete floor) at Camp Lejeune, plus hard standing for those vehicles of those units.

b. U. S. Marine Corps Tables of Equipment prescribe the number and type of combat vehicles required by each unit of the Second Marine Division. These Tables of Equipment were used as the basis for preparing the computations necessary for determining the number of repair bays, direct and indirect support space for each unit. The number of repair bays required for each unit was computed as prescribed in NAVDOCKS P-80. Basically this involved preparing an inventory, listing by equipment, cost codes for all the combat vehicles supported by each individual unit, and multiplying the total number of each type of equipment by its corresponding space factor (see tables 21-7, 21-8 and 21-9 of NAVDOCKS P-80). The individual code subtotal were then added, resulting in a total number of bays required per unit. This figure was rounded off to the nearest whole integer and table 21-10 of NAVDOCKS P-80 was used to convert the number of bays to square feet. The work area requirements per unit were then totaled to give the total work area (including direct and indirect support areas) of 30,150 square feet as required for Tenth Marine Regiment (less Fourth Battalion, Tenth Marines) second echelon combat vehicle maintenance facilities. In table one, the requirements for the individual units is shown:

Table One

Unit	Area
1st Bn, 10 Marine Regt (+ Hdq Bn, 10th Marine Regt)	12,050 SF
2nd Bn, 10th Marine Regt	9,050 SF
3rd Bn, 10th Marine Regt	9,050 SF
Total	30,150 SF

c. In addition to covered working space, parking space is required for vehicles. NAVDOCKS P-80 prescribes the method to be used in calculating the parking area requirements for organizational vehicles. This method prescribes an area of 40 square yards per vehicle. Parking space must be provided for 75% of the organizational vehicles. Based upon the conditions set forth above, the requirements for outside parking space were computed for Headquarters Battalion, 1st Battalion, 2d Battalion and 3rd Battalion of the 10th Marine Regiment

as 19,350 square yards of bituminous (Cat Code 852-11), and 270 square yards of concrete (Cat Code 852-10).

2. Requirements common to all structures:

a. Each of the proposed structures in the 2d Marine Division second echelon maintenance facility, have certain general construction features common to all. These are:

(1) Electrical: Single phase 110 volt 60 cycles per second power. Outlets should be placed at convenient locations throughout the structure. 110 volt electrical receptacles should be placed at each workbench.

(2) Lighting: Fluorescent lighting throughout. Each workbench should have a fluorescent bench lamp. Natural lighting (i.e., skylights, windows, etc.) should be utilized to the maximum extent possible. Floodlights required in parking areas.

(3) Heating: Central heating throughout.

(4) Air Conditioning: Temperature - humidity control in administrative spaces.

(5) Inter-office Communications: Intercom system in all work spaces. Master control unit should be installed in the maintenance office. Slave units should be used in all other spaces.

(6) Compressed Air: Outlets should be spaced in the maintenance bays, battery shop, and at each workbench.

(7) Telephones: Two telephones per structure.

(8) Floors: Reinforced concrete floors capable of supporting a ten ton wheeled vehicle.

(9) Air Exhaust System: A system by which exhaust fumes may be dispersed.

(10) Workbenches: Built-in, required in all work spaces.

(11) Interior walls: Painted masonry units throughout, metal doors with interior hinges.

(12) Ceilings: Acoustical tiling with asbestos insulation in direct and indirect support areas.

(13) Security: Interior and exterior security lighting.

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-138	COMBAT VEHICLE MAINTENANCE FACILITY (HADNOT POINT)

(Cont'd)

(14) Plumbing: Hot and cold running water in head/locker area. Cold running water only in battery shop, and for fire protection sprinkling system.

(15) Working spaces: Each structure should incorporate the following:

(a) Vehicle maintenance bays: The maintenance shop should contain at least one 10 ton capacity hydraulic lift, an overhead lubrication unit, a 2½ ton overhead rail crane, compressed air outlets, 110 volt electrical outlets at convenient locations, a waste oil sump, overhead vehicle doors at one end of the shop, and an automotive parts cleaning facility.

(b) Spare parts and operational spares room: Sufficient shelving to stock all operational spare parts, 110 volt receptacles.

(c) Maintenance office: Telephone outlets, 110 volt receptacles.

(d) Battery shop: Cold running water, stainless steel sink and drain, shower heads in wall and overhead, floor drain, compressed air, explosion-proof electrical receptacles, and air exhaust system.

(e) Tool issue room: Adequate shelving to store tools, 110 volt electrical receptacles.

(f) Head/locker space: 110 volt electrical receptacles. Hot and cold running water and wash basins in head.

(g) Dispatch office: One double hung frame window, 110 volt electrical receptacles.

(h) Tire shop: Compressed air, 110 volt electrical receptacles.

(i) OVE storage area.

(16) Outside area:

(a) Washing area, paved parking (bituminous or concrete), high pressure water, duck drains and wash racks.

(b) Alternate lubrication rack next to structure.

(c) Security lighting, light poles, lighting transformers, weatherproof electrical receptacles and control devices.

(d) Steam facility to provide wet steam.

(e) Loading ramps.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 20 JAN 1969	1971		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-138	COMBAT VEHICLE MAINTENANCE FACILITY (HADNOT POINT)

(Cont'd)

3. Justification:

a. The proposed second echelon combat vehicle maintenance facility is required to provide proper second echelon maintenance for the 585 combat vehicles authorized the Division in the table of equipment for these units. Each individual unit is required to perform second echelon maintenance on all of the vehicleswithin the command, and provide adequate space to perform the work. The nature of the work involves organizational maintenance, minor repair work, replacement of minor parts and operator maintenance.

b. Many of the buildings now being used for second echelon maintenance were built prior to, or during World War II, and all are substandard. Butler buildings and concrete block structures are presently being utilized by the various units of the 2d Marine Division. Each of these buildings now utilized have the following insufficiencies:

(1) Space: Bench space is restricted. Parts stock rooms are insufficient and tool rooms cramped. Office space is lacking because of inadequate space, and dispatchers often work under adverse conditions. Repair areas are generally inadequate in that these structures were primarily built for temporary storage. The repair bays are not large enough for big vehicles.

(2) Power: Inadequate facilities for transmission of power in all areas.

(3) Lighting: Lighting in many areas consists of a naked incandescent bulb hanging from the ceiling. Bench lamps are insufficient.

(4) Heating: Heating consists of kerosene space heaters which fail to adequately heat the area and are a safety hazard.

(5) Head/locker facilities: In most areas, no head facilities are available.

(6) Lubrication facilities: Compressed air is not available, therefore vehicles must be lubricated by hand, requiring the time of two men.

(7) Parking and hardstands: Parking areas are inadequate; few have asphalt or concrete.

(8) Washing facilities: Washing areas are inadequate or nonexistent. Drainage is poor.

4. Summary:

Each of the units in the 2d Marine Division is required to maintain its combat vehicles in a combat ready condition. Second echelon maintenance is an important part of keeping these vehicles in combat ready condition. The present structures are completely inadequate

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION

(Cont'd)

for the reasons stated above. Vehicle deadline times are relatively high in the 2d Marine Division and will remain high until adequate facilities are provided which incorporate all of the features listed in paragraph 2. This facility will enable the entire 2d Marine Division to maintain its combat vehicles and fulfill its second echelon maintenance commitments. Without this facility, the Division will be hamstrung by its obviously inadequate second echelon maintenance capability and its operational readiness will be impaired.

24. RELATED LINE ITEMS

25. REQUIREMENT FOR LINE ITEM

The Preservation, Packaging, and Packing (PP&P) Branch has the mission of providing preservation, packaging, and packing for all organizations within the Camp Lejeune Complex. The demands for support of the 2d Marine Division mount-out supplies and material and equipment to support Force Troops units comprise approximately 90 percent of the production output, which runs between 500,000 and 800,000 items annually. Operations are conducted in five old Butler buildings joined to form one building. These buildings, for the most part, are unheated, do not have adequate lighting, electrical outlets or ventilation. Air supply for pneumatic tools is also inadequate. The buildings are old and the metal covering panels fit so poorly that dust and blowing sand creates a contamination problem during packaging operations. The equipment now being used in the PP&P function has already passed its normal useful life expectancy and funds have been programmed for procurement of new replacement equipment. Installation of this new equipment in the Butler building described above will tend to negate the advantage that should be realized from the new equipment. In addition to the foregoing, approval of this line item will permit the consolidation of the PP&P function with other related warehousing activities at Camp Lejeune and will result in overall savings in money and personnel and a more efficient operation. This line item will not cause additional air or water pollution.

DD FORM 1 JUL 62 1391

BOOK NO. _____ PAGE NO. _____

REVISED 18 DEC 1968	1971			MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-146	PRESERVATION, PACKAGING, AND PACKING FACILITY (229-90) (HADNOT POINT)

1. Function to be Performed. The function to be performed is to provide adequate protection for all government supplies, i.e., spare parts, major item assemblies, and major items.

2. Necessity for Performing this Function. In order for this facility to provide adequate protection for government supplies, it is necessary that this facility have modern preservation and packaging facilities.

3. List of Existing and Authorized Facilities Similar to the New Facility Requested Which Can Be Used for Performing this Function. There are two existing facilities at the present time - Buildings #909 and #1810. Both of them are outdated. Building #909 is a second-hand prefabricated steel building approximately 200 feet square. The building was made by joining several 40' x 200' Butler buildings and the various sections are separated from the others by steel walls and framing. Building #1810 is in the same general condition.

4. Current and Planned Future Workload with Regard to This Function. This operation is carried on throughout the year. The thousands of items generated through the preservation and packaging sections are separated and segregated as to classification, checked for condition, and directed to the proper work operation which will provide the level of protection necessary for the individual item (2). This is accomplished by trained personnel following the prescribed sequence of procedures and utilizing the correct materials necessary to provide adequate protection. The end results are unit protection and intermediate packaging. Through physical directions and coordination by the assembly line supervisors and operators, items are directed to the packing and marking line to be placed in exterior containers and marked as to FSN, quantity, nonclameture, weight, cube and tactical markings. The exterior containers are nailwood boxes, plywood boxes, open and/or closed crates, pallet boxes, bin pallet boxes and corrugated or fiberboard boxes. These are ordered from the box assembly section as the items are being processed on the preservation assembly lines in order to prevent a backlog between the packaging and packing sections. Normally the Preservation and Packaging Branch processes approximately (20) twenty different work requests at the same time. There are usually about 5,000 different types and/or classes of materials being processed. The daily production is approximately 2,000 items per day being completed.

5. Description of Construction Being Requested. Duration of need is indefinite. Construction of a new building would provide space for Administrative Offices, nail wood box shop and adequate space to preform necessary functions as a Preservation, Package, and Packing Facility.

6. List of Collateral Equipment to be included in Line Item. None

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-146	PRESERVATION, PACKAGING, AND PACKING FACILITY (HADNOT POINT)

7. List of Collateral Equipment Associated With, but Not Included in, Line Item.

Conveyer (Package Handling)	100,000
Paint Spray Booth	8,500
Total	108,500

8. Justification for the New Facility.

a. The primary purpose and assigned mission of the Preservation and Packaging Branch, Camp Lejeune, North Carolina, is to provide adequate protection for all government supplies, i.e. spare parts, major item assemblies, and major items. This is accomplished by various work methods performed in the following sequence: cleaning, drying preserving, unit protection, i.e., wrapping, sealing, cushioning, marking, packaging, identifying and packing. The classification of supplies processed by this Branch is: motor transport, ordnance, engineer, electronics, and general supply. Special projects are: code plan Cloud,B.L.T. mount-out blocks for F.M.F., Force Troops, mount-out blocks for the 2d Marine Division, and in general a miscellaneous amount of tactical commodities for the 2d Marine Air Wing, Cherry Point and M.A.G. 26, New River Air Facility. These services of adequately protecting government supplies for long-term storage and/or for mount-out readiness to be deployed to any destination, regardless of climatic conditions or mode of transportation are provided for all organizations within the Camp Lejeune and Cherry Point Complex.

b. This accomplishes the mission; work is performed under the most adverse and difficult conditions which cause severe problems in maintaining control of corrosion and preventing deterioration. Some of the problems are:

(1) Normal use for 16 years, plus the strong winds associated with hurricanes, has had a deteriorating effect on the present building. Although maintenance on this building has been continued, the roof has deteriorated to such an extent that moisture penetrates and leaks are so numerous that supplies, materials and equipment have to be covered to prevent excessive water damage. Due to the geographic location of the present building, less than ten miles from the Atlantic Ocean and the soil characteristic (sand) prevalent, salt air, sand and other abrasive types contaminants can and do penetrate the sectional type walls.

(2) The anilwood box section is located adjacent to the preservation and packaging section and separated only by a sectional type sheet steel wall. Moisture laden saw dust penetrates into the preservation section.

(3) The distribution of work performed is accomplished in different sections of Building #909. This results in supplies being moved completely outside exposed to the particular situation existing at the time - air, dust, and moisture.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 18 DEC 1968	1971		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-146	PRESERVATION, PACKAGING, AND PACKING FACILITY (HADNOT POINT)

(Cont'd)

(4) The ventilation system is not adequate. Only one section has stationary exhaust fans to cool the working area. Pedestal type fans are used. In summer, the heat in some working areas is in excess of 100 degrees F.

(5) The heating system is not adequate. There are only five (5) small steam heating units in one section to heat approximately 180,000 cubic feet. This is not sufficient. All five (5) sections are standard size Butler buildings, size 40' wide and 200' long. All other sections are heated with only pot-belly wood and/or coal heaters, one installed at each end of the buildings with the heater pipe sticking out through the side of the building. The majority of all working areas are very cold in winter.

(6) There are no exhaust systems to handle the saw dust generated within the nail wood box assembly section which cuts approximately 500,000 material board feet of lumber and 6,000 sheets of plywood per year.

(7) Production time is lost because of the location of the head facilities and water fountains. There are only three commodes to be utilized among the present T/O of 72 employees. Personnel working in the preservation section and box assembly section have to walk a distance of from 100 to 500 feet from their working areas to the head facilities. There are only two drinking fountains and two lavoratories in the five sections of Building #909. Not only are the facilities inadequate, but they are not conveniently located to save personal time.

(8) The overall area in square feet is not adequate to employ additional equipment necessary to increase capabilities of this plant.

(9) Most of the initial equipment originally installed was second hand and only in the past three years has any replacement been made. Most of the original pieces are now obsolete, and the life expectancy has expired.

(10) There are no head facilities for female employees. Although there is only one clerk stenographer working in this Branch at the present time, there is no discrimination in many job classifications performed within this Branch. At present the head facilities located in Building #941 are being utilized as the ladies' lounge.

(11) The only entrance and exits are large doors, size 12' x 12' at the end of each building section. There are no doors within the five (5) sections, therefore, since materials are moved from the staging area to the processing sections all supplies are moved inside and out through these doors utilizing material handling equipment (fork lifts). This results in dust penetrating through the plant in summer and severe cold air in winter.

(12) There are many safety factors that are problems to control, these being water leaking on electrical switches, fluorescent lights, and electrically operated stationary and portable equipment. These are hazards and involve the safety of

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 18 DEC 1968	1971		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-146	PRESERVATION, PACKAGING AND PACKING FACILITY (HADNOT POINT)

(Cont'd)

many employees. Also, materials and equipment used in the processing operation have to be protected with covers during heavy rain storms to prevent damage and accelerated deterioration.

c. There are, at the present, 56 employees performing duties within the preservation and packaging branch. The approved T/O is 72. Employees assigned to shops and sections are:

Administrative Section	2
Preservation and Packaging Section	26
Paint Shop	10
Box Shop	18
Total Personnel	56

9. Effects if the New Facility is Not Provided. If the alterations to Building #1011 are not made the mission of the facility cannot be carried out for a much longer period. There will be a great loss of material due to rust, etc. This, of course, would be a needless waste compounded by rational situation at present, and the standing demand for operational equipment.

10. Justification for the Size and Scope of the New Facility. Operational size and scope are based on a detailed report that concerned itself with workload, space available versus storage and personnel. All figures are compatible with all OPNAV Forms, plus NAVMC 10651.

11. Justification for the Type of Construction Planned. The material to be used if of a type that will give the longest use for the cheapest price.

12. Alternate Solution. There is no alternate solution.

13. Plans for Facilities Being Replaced. They will be returned to their former use, warehouses.

14. Status of Preliminary Engineering. Preliminary engineering report has not been started.

15. Sketch Showing Planned Location of the New Facility. Enclosure (1).

16. Other Graphic Presentations, Including Photographs. None.

17. Potential Flood Hazards. Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable.

18. Pollution Prevention, Abatement and Control. This item will not cause additional air or water pollution.

25. REQUIREMENT FOR LINE ITEM

The existing open bay barracks are substandard by OPNAV instruction 11012.2A, dated 28 Sept 1967. Providing bachelor enlisted men with adequate living quarters is considered essential in order to compete for highly skilled manpower to operate and maintain complex equipment and weapons systems. This line item is the first in a series of increments that is proposed to rehabilitate existing barracks to conform to the new criteria for bachelor accommodations. This phasing in increments is necessary to avoid closing too many barracks at one time and the scheduling coincides with the rehabilitation of other support facilities within the specific area. If this line item is not provided, low morale and a high turnover rate in enlisted personnel will continue to be a major problem.

13 SEPT 1968	1971		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-801	REHABILITATE ENLISTED MENS BARRACKS #301, 305, 309, 313 (HADNOT POINT)

1. Function to be Performed. Provide adequate billeting of enlisted personnel in quarters conforming to present criteria.

2. Necessity for Performing This Function. It is the Department of Defense policy to provide barracks for enlisted personnel. In line with this, new criteria are continually being developed to improve the habitability of barracks and considerable emphasis is currently being placed upon improving existing substandard barracks and/or construction of new modern barracks to replace those which cannot be economically rehabilitated to satisfy deficiency requirements for bachelor enlisted personnel who must be billeted aboard the base.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function. All of the existing barracks at Camp LeJeune are substandard by the latest criteria for bachelor housing accommodations except for barracks recently completed for Force Troops in the French Creek area. In the five regimental areas at Hadnot Point there are 60 barracks of the H Type. Consolidation of the 2nd Marine Division in these areas is planned. All 60 barracks are structurally sound. The gang toilets have recently been rehabilitated and it is economically feasible to remodel these buildings. All other barracks of this type on the base are in similar condition and are to be rehabilitated and retained. There are no other buildings on the base similar to the facility requested that can be used to perform this function.

4. Current and Planned Future Workload With Regard to This Function. The planned workload for enlisted men billeting requirements in the 2nd Marine Division is 14,013 men.

5. Description of Construction Being Requested. This line item provides for the rehabilitation of 4 of the H Type barracks in the 3rd Regimental area. The open bays are to be remodeled to provide 36,3-men rooms and 4, 2-men rooms for a total of 116 men to be billeted in each barrack after rehabilitation. A new heating and air conditioning system and new lighting shall also be provided in each building. Chilled water for air conditioning will be provided from a new central system. The room partitions shall be 6 inch masonry painted walls with steel door frames and wood doors.

6. List of Collateral Equipment to Be Included in the Line Item.

Heating & Air Conditioning	224 Tons	$100,800
Drinking Water Coolers, Elect	16 @ $150.00	2,400
Total		$103,200

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
13 SEPT 1968	1971		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-801	REHABILITATE ENLISTED MENS BARRACKS #301, 305, 309, 313 (HADNOT POINT)

7. List of Collateral Equipment Associated With, but Not Included in, Line Item.

Item Description	Quantity	Unit Price	Total Price
Wardrobe	464	$225.00	$104,400
Bunks W/Mattress, Springs, Pillow, etc	464	50.00	23,200
Desk	464	100.00	46,400
Chair (Desk Type)	464	18.00	8,352
Lounge Furniture	-	Lump Sum	3,200
Total			$185,552

8. Justification for the New Facility. Providing completely livable bachelor enlisted men quarters with adequate space and facilities conforming to present day criteria is the policy of the Department of Defense. This project is intended to offset part of the total deficiency in bachelor housing by the rehabilitation of existing barracks to provide 2 and 3-men rooms in lieu of open dormitory space. Air conditioning is to be provided as well as improved lighting. This line item represents the first of a series of increments to satisfy the deficiency in EM bachelor housing. This is essential to avoid closing too many barracks simultaneously during construction.

9. Effects if Facility is not Provided. If this line item is not provided personnel will continue to be billeted in substandard quarters resulting in low morale and a low percentage of re-enlistments.

10. Justification for the Size and Scope of the New Facility. The size of the new rooms in the rehabilitated barracks will conform to present criteria for the grades involved.

11. Justification for the Type of Construction Planned. The type of new construction is the most durable and the most economical to maintain.

12. Alternate Solutions. There are no alternate solutions that can be economically justified.

13. Plans for Facilities Being Replaced. No facilities are being replaced by the planned construction.

14. Status of Preliminary Engineering. No preliminary engineering has been performed other than developing the floor plans and preliminary programming estimates.

25. REQUIREMENT FOR LINE ITEM

The existing 2nd Marine Division, 3d Echelon combat vehicle maintenance facility, is an all steel (Butler Type) building which was second hand at the time it was erected. It is inadequate because of insufficient floor space and lighting and inadequate bench space. The building is impossible to heat in the winter and is terribly hot in the summer. The proposed new shop building will provide proper 3d Echelon maintenance for all of the 2,916 combat vehicles in the division. During FY 66, Maintenance Company, Service Battalion, completed 1,729 job requests on engineer equipment and 2,661 job requests on motor transport equipment. Repair on hulls, turrets, propulsive systems and power trains are included which require large floor space and heavy hoisting equipment. This facility will not cause additional water pollution. The air pollution caused by this item will be abated in accordance with Executive Order No. 11282 by corrective measures as part of this line item.

DD FORM 1 JUL 62 1391

BOOK NO. PAGE NO.

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-139	COMBAT VEHICLE MAINTENANCE FACILITY, 2D INCREMENT, 3D ECHELON, 2D MARDIV (HADNOT POINT)

1. Function to be Performed. The performance of 3d echelon combat vehicle (wheeled vehicle and engineer equipment) maintenance support for all of the 2d Marine Division.

2. Necessity for Performing This Function. In order for the 2d Marine Division to perform 3d echelon maintenance on combat vehicles, it is necessary to have functionally adequate facilities to expedite these services.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function. The 2d Service Battalion, 2d Marine Division has no facilities which are similar to the requested facilities contained herein. The 3d echelon combat vehicle maintenance repairs are presently accomplished in the following Butler buildings located in the Division Industrial Area:

BLDG NO.	SIZE	TYPE CONSTRUCTION
1808	8,000 SF	Metal-Semi-Permanant
1826	6,700 SF	Metal-Semi-Permanant
1827	12,000 SF	Metal-Semi-Permanant

4. Current and Planned Future Workload With Regard to This Function.

(a) Breakdown of work orders accomplished by the 2d Service Battalion. These figures represent work orders accomplished during the period of Calendar Year 1966.

TYPE	POPULATION	NO. WORK ORDERS
Engineer Equipment	793	853
Automotive Equipment	2,661	5,200

(b) The present facilities are in use daily throughout the year. An average of 10 hours per work-day for a 5-day week is spent working in each shop. On various occasions it has been necessary to work at night and on week-ends.

(c) Availability of repair parts and excessive leadtime is a factor of paramount influence on the deadline rate of combat vehicles, and consequently influences the maintenance problem.

(d) List of different types of vehicles organic to the units supported by the 2d Service Battalion:

5. Description of construction being requested.

(a) A modern equipped structure of steel and masonry construction of the type presently being built (i.e., brick exterior and concrete floors) at Camp LeJeune, plus hardstand parking for those vehicles awaiting third echelon maintenance. This building should contain the following general construction features. Duration of need is indefinite.

(1) Electrical: Three-phase, 110/220 volt, 60 cycles per second power. Outlets should be placed at convenient locations throughout the structure. 110 volt electrical receptacles should be placed at each workbench. A complete electrical grounding system is required throughout. Portable type DC power sources are required in all shop areas.

(2) Lighting: Fluorescent lighting throughout. Each workbench should have a fluorescent bench lamp. Natural lighting (i.e., skylights, windows etc.) should be utilized to the maximum extent possible. Flood lights required in parking areas.

(3) Heating: Central heating throughout.

(4) Air Conditioning: Temperature - Humidity control in administrative spaces.

(5) Inter-Office Communications: Intercom system in all work spaces. Master control unit should be installed in both the wheeled vehicle and engineer maintenance office. Slave units should be used in all other spaces.

(6) Compressed Air: Outlets should be spaced in the wheeled vehicle maintenance shop, engineer maintenance shop, and at each workbench.

(7) Telephones: Two telephones required. One should be located in the Motor Transport Platoon Office and one should be located in the Engineer Platoon Office.

(8) Floors: Reinforced concrete floors capable of supporting a twenty-ton wheeled or tracked vehicle.

(9) Air Exhaust System: A system by which exhaust fumes may be dispersed should be installed throughout building including the paint shop. Flexible hose connections for dispersing engine exhausts are required in engineer and wheeled vehicle shop areas.

(10) Workbenches: Built in, required in all work spaces.

(Continued:)

(11) Interior Walls: Lath and plaster or plasterboard throughout; wood panel doors with interior hinges.

(12) Ceiling: Acoustical tiling with asbestos insulation in direct and indirect support areas.

(13) Security: Interior and exterior security lighting should be installed.

(14) Plumbing: Hot and cold running water in head/locker area. Cold running water only in all maintenance shops and for fire prevention sprinkling system.

(15) Steam: Wet steam should be provided in all maintenance shops.

(16) Working Spaces:

(a) Wheeled Vehicle Maintenance Shops (30 Bays): The wheeled vehicle maintenance shops should contain a total of at least six 20-ton capacity hydraulic lifts, an overhead lubrication unit, a 2½-ton overhead rail crane, compressed air outlest, 110/220 volt electrical outlets at convenient locations, a waste oil sump, overhead vehicle doors at both ends of the shop, an automotive parts cleaning facility, and "drive through" straddle racks capable of supporting at least 10 tons.

(b) Engineer Maintenance Shop (12 Bays): Engineer Maintenance shop should contain overhead lubrication units, a 2½-ton overhead rail crane, compressed air outlets, 110/220 vac electrical power outlets at convenient locations, a waste oil sump, overhead vehicle doors at both ends of the shop, and a parts cleaning facility.

(c) Engineer and Motor Transport Shop Stores: Sufficient shelving to stock all repair parts, 110 vac receptacles.

(d) Engineer Equipment Maintenance Office: Telephone outlet, 110 vac receptacles.

(e) Engineer Tool Issue Room: Adequate shelving to store tools, 110 vac electrical receptacles.

(f) Motor Transport Wheeled Vehicle Tool Issue Room: Adequate shelving to store tools, 110 vac electrical receptacles.

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-139	COMBAT VEHICLE MAINTENANCE FACILITY, 2D INCREMENT, 3D ECHELON, 2D MARDIV (HADNOT POINT)

(Continued:)

(g) Head/Locker Space: 110 vac electrical receptacles. Hot and cold running water, and wash basins in head.

(h) Motor Transport Paint Shop: Compressed air, 110/220 vac 60 cycle per second power, overhead vehicle door, and parts cleaning facility. This area can be used as a maintenance shop when no vehicles are being painted. Explosive proof electrical outlets and lighting fixtures are required. Lighting should be of high intensity for paint drying, similar to commercial paint shop facilities.

(i) Welding Shop: Should contain storage racks for exygen, acetylene and welding equipment, welding bench.

(17) Outside Area:

(a) Washing Area: Hardstand (bituminous or concrete), high pressure water, deck drains and wash racks.

(b) Alternate lubrication rack next to structure.

(c) Security Lighting: Light poles, lighting transformers, weatherproof electrical receptacles and control devices.

(d) Steam facility to provide wet steam.

(e) Loading ramps.

(f) Approach Ramps: Approach ramp to engineer maintenance shop shall be concrete. It should extend at least fifty feet from the building. Other approach ramps may be bituminous material.

(b) Duration of need indefinite.

6. List of Collateral Equipment to Be Included in the Line Item:

Mechanical Exhaust System	
Workbenches in all Work Bays	
Hydraulic Lift 20-Ton Capacity	1
Overhead Rail Crane 2½-Ton capacity	2
Shelving in all Storage Areas	

7. List of Collateral Equipment Associated With, but Not Included in, Line Item: None required.

8. Justification for New Facility:

(a) The proposed 3d echelon combat vehicle maintenance facility as described herein will provide a proper maintenance facility for the performance of 3d echelon maintenance on the 2661 wheeled combat vehicles and 793 engineer vehicles authorized the 2d Marine Division. The nature of the 3d echelon work in the general terms involves replacement of major assemblies such as engines and power trains, rebuilding of items replaced at 3d echelon such as carburetors and components of electrical systems. Welding, body repairs and painting of vehicles are also a function of 3d echelon maintenance.

(b) The 2d Service Battalion presently accomplishes all 3d echelon combat vehicle maintenance repairs in Butler buildings. These buildings were erected in 1951-1952 as semi-permanent buildings. All of the buildings are inadequate in all respects for a maintenance facility.

9. Effects if the New Facility is Not Provided.

(a) Combat vehicle deadline times are relatively high in the 2d Marine Division due to lack of adequate facilities, and in all probability will remain high until adequate indoor repair facilities are provided which incorporate all of these features outlined in paragraph 5.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 2 NOV 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-139	COMBAT VEHICLE MAINTENANCE FACILITY, 2D INCREMENT, 3D ECHELON, 2D MARDIV (HADNOT POINT)

10. Justification for the size and scope of the new facility.

(a) The U.S. Marine Corps Table of Equipment (T/E) prescribes the number and type of combat vehicles organic to the units of the 2d Marine Division. The T/E was used as the basis for preparing the computations necessary for determining the number of repair bays, direct and indirect support space required for the 3d echelon combat vehicle maintenance facility.

(b) The number of repair bays required was computed as prescribed in NAVDOCKS P-80. This involved preparing an inventory listing by equipment cost codes for all of the combat vehicles in the 2d Marine Division as authorized by the T/E and multiplying the total number of each item of equipment by its corresponding space factor (see tables 21-7, 21-8, and 21-9 of NAVDOCKS P-80). The individual code subtotals were then added resulting in a total number of bays required. This figure was rounded off to the nearest whole integer and table 21-10 of NAVDOCKS P-80 was used to convert to square feet. Using this method, a total work area (including direct and indirect support areas) of 42,295 square feet is required for the 2d Marine Division third echelon combat vehicle maintenance facility. To provide for a maintenance facility of adequate size to properly perform third echelon maintenance, factors were developed by this command which are not covered by criteria of the NAVDOCKS P-80. Criteria was developed by using an average deadline rate of combat vehicles requiring third echelon maintenance, average repair time required in shop, unit tables of organization, repair parts availability and present space utilization. Using the method established by NAVDOCKS P-80 and applying that criteria developed by this command, a total work area (including direct and indirect support areas) of 26,160 square feet is required for the 2d Marine Division third echelon combat vehicle maintenance facility. This area includes 42 standard size repair bays, and 6,000 square feet of indirect and direct support space.

(c) In addition to covered working space, parking space is required for vehicles awaiting 3d echelon maintenance. NAVDOCKS P-80 prescribes the method to be used in calculating the parking area requirements for organizational vehicles. This method prescribes an area of 40 square yards per vehicle. However, NAVDOCKS P-80 does not specify a method by which parking space for vehicles requiring third echelon maintenance can be calculated. It is assumed that no more than 10% of the 2d Marine Division vehicles will be deadlined at any time. NAVDOCKS P-80 prescribes that parking space for 75% of those vehicles must be provided. Based upon the above hypothesis, parking space for 219 vehicles, or 8,760 square yards of parking area must be provided, and fenced. At least 270 square yards of this space must be reinforced concrete (Category Code 852-10) to support tracked vehicles. The remaining 8,490 square yards shall be bituminous hardstand (Category Code 852-11).

(d) The new facilities are required to replace the existing semi-permanent facilities now being used which have been in existance some 15 or 16 years. These Butler buildings are old and constructed during an era when construction codes were minimal. These buildings provide little more than a lean-to type structure. These buildings have the following deficiencies:

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 2 NOV 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-139	COMBAT VEHICLE MAINTENANCE FACILITY, 2D INCREMENT, 3D ECHELON, 2D MARDIV (HADNOT POINT)

(Continued:)

(1) Space: Bench space is restricted. The parts stock room is insufficient and the tool room cramped. Office space is lacking because of inadequate space. Repair areas are generally inadequate in that these structures were primarily built for temporary storage. Because of the inadequacy of existing doors, large amounts of "dead space" are created.

(2) Power: Inadequate facilities for transmission of power. No grounded electrical system is available.

(3) Lighting: Lighting is insufficient. Bench lamps are insufficient.

(4) Heating: Heating consists of kerosene space heaters which fail to adequately heat the area and are a safety hazard.

(5) Ventilation: No ventilation system exists. Ventilation is insufficient, causing a safety hazard.

(6) Steam Facilities: Wet steam is insufficient.

(7) Plumbing Facilities: Water facilities are insufficient.

11. Justification for the type of Construction Planned.

(a) As pointed out in paragraph 10, the facilities used by the 2d Marine Division for 3d echelon combat vehicle maintenance are primitive with little or no utilities.

(b) The combat readiness of the Marine Corps major elements has proved a vital statistic to the defense of the United States. Without adequate facilities to perform its combat vehicle maintenance requirements its combat readiness posture is impaired.

12. Alternate Solution:

(a) There is no foreseeable economic solution to resolve this requirement which could be adopted. The present facilities at Camp LeJeune are being utilized to the maximum extent possible.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 2 NOV 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

(Continued:)

(b) All of the buildings at Camp LeJeune are of the same vintage. To attempt to modify any other structure would be an exorbitant waste of time and funds.

13. Plans for Facilities Being Replaced. Building 1808 retained for temporary storage. Building 1826 and Building 1827 to be razed.

14. Status of Preliminary Engineering. No preliminary engineering reoprt has been started.

15. Sketch Showing Planned Location of the New Facility. Enclosure (1).

16. Other Graphic Presentations, Including Photographs. None.

17. Potential Flood Hazards. Requirements of Executive Order No. 11296 (Flood Hazards)are not applicable.

18. Pollution Prevention, Abatement and Control. This item will not cause additional water pollution. The air pollution caused by this item will be abated in accordance with Executive Order No. 11282 by corrective measures included as part of this line item.

25. REQUIREMENT FOR LINE ITEM

Units of the 2nd Marine Division are working in buildings which were constructed nearly a quarter of a century ago. Those buildings new used for combat vehicle maintenance facilities are warehouse buildings (modified for maintenance facilities) and Butler buildings. These buildings are all semi-permanent structures which are inadequate in all respects for a maintenance facility, and also have out-lived the normal expectancy of a buildings of this type. Because of these inadequate facilities, combat vehicle deadlines are relatively high in the 2nd Marine Division and will in all probability remain high until adequate facilities are provided. At present any repairs which are beyond the scope of 2D Echelon maintenance must be performed at 3D Echelon by the 2D Service Battalion. This item will not cause additional water pollution. The air pollution cuased by this item will be abated in accordance with Executive Order No. 11282 by corrective measures included as part of this line item.

5. LINE ITEM NUMBER		6. LINE ITEM TITLE		
P-196		2D ECHELON COMBAT VEH FACILITIES - 2D DIVISION (214-10)		(HADNOT POINT)

1. Function to be Performed. The performance of 1st and 2d echelon maintenance of the unit's organizational combat vehicles as assigned by the Tables of Equipment (TE) for each unit.

2. Necessity for Performing This Function. The maintenance of the unit's organizational combat vehicles is the individual command's responsibility to maintain the equipment operating and combat ready for deployment in the event of a national emergency.

a. Each unit within the 2d Marine Division is authorized to accomplish 1st and 2d echelon maintenance to its assigned combat vehicles. Any repairs which are beyond the scope of 2d echelon maintenance must be performed at 3d echelon by the 2d Service Battalion.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function. The 2d Marine Division has no facilities which are similar to the requested facilities contained herein. The Division presently utilizes various buildings located within the Marine Corps Industrial Aid for Combat Vehicle Maintenance Shops and Butler buildings located within the Division Industrial Area.

Buildings occupied by each unit:

UNIT	BLDG. NO.
2d Reconnaissance Battalion	BA130
2d Shore Party Battalion	1804
2d Service Battalion	1817
Headquarters Battalion	1406

4. Current and Planned Future Workload With Regard to This Function.

a. Breakdown of work orders accomplished by the above units. These figures represent repairs accomplished for the period of calendar year 1966.

UNIT	VEHICLE POPULATION	WORK ORDERS ACCOMPLISHED
Headquarters Battalion	212	---
2d Shore Party Battalion	140	514
2d Reconnaissance Battalion	107	368
2d Service Battalion	315	---

(Continued:)

b. The present facilities are in use daily throughout the year. There are, however, short periods of time when special exercises are conducted in which an entire unit may deploy in total for 2 or 3 weeks. During these periods of special deployment, the facility is not in use, however, deployments such as this double the maintenance requirements for vehicles and consequently many nights are also required for post deployment vehicle maintenance. Two examples of additional maintenance requirements when a vehicle contacts salt water are: all vehicles must be thoroughly washed down with water and steam to prevent rusting and secondly all wheel units must be removed and all wheel bearings repacked with grease.

c. List of different type vehicles organic to the above units which are repaired in the maintenance facilities:

5. Description of Construction Being Requested.

a. Each separate structure in the 2d Marine Division 2d Echelon Maintenance facility shall be a permanent structure having general construction features common to all. These are.

(1) Electrical: 3 Phase 4 wire 110/220 Volt Power. Outlets should be placed at convenient locations throughout the structure. Each work bench should have adequate 110 volt receptacles.

(2) Lighting: Fluorescent lighting throughout. Each workbench should have fluorescent bench lamps. Natural lighting (i.e. skylights, windows etc.) should be utilized to the maximum extent possible. Flood lights required in all organizational vehicle parking areas.

P-196	2D ECHELON COMBAT VEH FACILITIES - 2D DIVISION (HADNOT POINT)

(Continued)

(3) Heating: Central heating throughout.

(4) Air-Conditioning: Temperature-humidity control in all administrative areas.

(5) Floors: Reinforced concrete floors capable of supporting a five-ton wheeled vehicle.

(6) Mechanical Air Exhaust System: A system by which motor vehicle exhaust fumes may be dispensed from the facility.

(7) Interior Walls: Lath and plaster or plasterboard throughout, wood panel doors with interior hinges.

(8) Ceilings: Acoustical tile with asbestos insulation in direct and indirect support areas.

(9) Security: Interior and exterior lighting.

(10) Plumbing: Hot and cold running water in head/locker room area. Cold running water only in battery shop and for fire prevention sprinkling system.

b. Each Structure Should Incorporate the Following Work Spaces:

(1) Wheeled Vehicle Maintenance: Motor Transport Maintenance Shop should contain at least one 5-ton capacity hydraulic lift; an overhead lubrication unit; a one-ton overhead rail crane; compressed air outlets; overhead vehicle doors at one end of the shop; and automotive parts cleaning facility.

(2) Spare Parts and Operational Spares Room: Sufficient shelving to stock all operational spare parts; 110 volt AC receptacles.

(3) Wheeled Vehicle Maintenance Office: Telephone outlets; 110 volt AC receptacles.

(4) Battery Shop: Cold running water, stainless steel sink and drain, shower heads in wall and overhead, floor drains, compressed air, explosion proof electrical receptacles, and a mechanical air exhaust system.

(5) Tool Issue Room: Adequate shelving to store tools; 110 volt AC electrical receptacles.

(6) Wheeled Vehicle Dispatcher Office: One double hung window; 110 volt AC electrical receptacles.

P-196	2D ECHELON COMBAT VEH FACILITIES - 2D DIVISION (HADNOT POINT)

(Continued)

(7) Tire Shop: Compressed air, 110 volt AC electrical receptacles.

(8) OVE Storage Area:

c. Outside Areas:

(1) Washing area; hardstand (concrete), high pressure water, deck drains, wash racks, and steam.

(2) Alternate lubrication rack next to structure.

(3) Security lighting: light poles, lighting transformers, weatherproof electrical receptacles and control devices.

(4) Steam facility to provide wet steam.

d. Special construction requirements for individual units:

(1) Headquarters Battalion Facility: A 10-ton capacity hydraulic lift in the wheeled vehicle maintenance shop. Reinforced concrete floors to support up to a 10-ton vehicle.

(2) 2d Service Battalion Facility: Same as Headquarters Battalion plus reinforced concrete loading ramp.

(3) 2d Shore Party Battalion Facility:

(a) The Engineer Maintenance Shop to incorporate the same features as the wheeled vehicle maintenance shop, except that no hydraulic lift is required.

(b) A 20-ton capacity hydraulic lift in wheeled vehicle maintenance shop.

(c) A $2\frac{1}{2}$-ton capacity overhead rail crane in the engineer shop, instead of a 1-ton capacity overhead rail crane.

(d) Reinforced concrete floor to support up to 20-tons in engineer maintenance shops and wheeled vehicle shops.

(e) An engineer maintenance office similar to the wheeled vehicle maintenance office.

(f) An engineer dispatch office similar to the wheeled vehicle dispatcher office.

8. Justification for New Facility.

a. The proposed 2d echelon combat vehicle maintenance facilities for the above units will provide proper maintenance facilities for the performance of 1st and 2d echelon maintenance on the 1739 combat vehicle authorized in the Marine Corps Tables of Equipment. Each individual unit is required to perform 1st and 2d echelon maintenance on all of the vehicles assigned to the command and provide adequate space to accomplish the work. The nature of the work in general terms involves organizational maintenance, minor repairs, replacement of parts, and operator maintenance.

b. Units of the 2d Marine Division are working in buildings which were constructed nearly a quarter of a century ago. Those buildings now used for combat vehicle maintenance facilities are warehouse buildings (modified for maintenance facilities) and Butler buildings. These buildings are all semi-permanent structures which are inadequate in all respects for a maintenance facility, and also have out-lived the normal life expectancy of a building of this type.

9. Effects if the New Facility is not Provided. Combat vehicle deadlines are relatively high in the 2d Marine Division and will in all probability remain high until adequate facilities are provided which incorporate all features outlined in paragraph 5.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 1-Oct 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-196	2D ECHELON COMBAT VEH FACILITIES - 2D DIVISION (HADNOT POINT)

(Continued:)

10. Justification for the Size and Scope of the New Facility: Breakdown on the square feet of facilities required by each unit, also the amount of parking area required for each of the organization's combat vehicles:

UNIT	VEHICLE POPULATION	NO. BAYS	SQFT BAYS	INDIRECT SUPPORT SQFT	DIRECT SUPPORT SQFT	CROSS AREA OF BLDG SQFT	ASPHALT HARDSTAND	CONCRETE HARDSTAND
Hq Bn	212	4	1920	1500	2720	6140	6360	0
Shore Party	140	3	1440	1050	2080	4570	3660	540
Recon Bn	107	2	960	600	1440	3000	3210	0
Svc Bn	315	5	1725	1725	3100	7225	9450	0
TOTALS	774	14	6045	4875	9340	20935	22680 SY	540 SY

a. The U. S. Marine Corps Tables of Equipment (T/E) prescribes the number and type of Combat Vehicles authorized each individual unit of the 2d Marine Division. The T/E was used as the basis for preparing the computations necessary for determining the number of repair bays, and direct and indirect support spaces required for each unit. The number of repair bays for each unit was computed as prescribed in the NAVDOCKS P-80. Basically this involved preparing an inventory listing by equipment cost codes for all of the combat vehicles supported by each unit, and multiplying the total number of each type of equipment by its corresponding space factor (see tables 21-7, 21-8 and 21-9 of NAVDOCKS P-80). The individual code subtotals were then added, resulting in a total number of bays authorized per unit. This figure was rounded off to the nearest whole integer and table 21-10 of NAVDOCKS P-80 was used to convert the number of bays to square feet. The work area requirements per unit were then totaled to give the total work area (including direct and indirect support areas). A gross area (including direct and indirect support areas) of 22,680 square feet is required for the 2d Shore Party Battalion, 2d Service Battalion, 2d Reconnaissance Battalion and Headquarters Battalion, 2d Marine Division to provide 1st and 2d echelon combat vehicle maintenance facilities for each of the units.

b. In addition to covered working space, parking space is required for the organizational vehicles of each unit. The NAVDOCKS P-80 prescribes the method to be used in calculating the parking area requirements for organizational vehicles at a maintenance facility. Using an area of 40 square yards per vehicle, parking space is provided for 75% of the organizational vehicles. Based upon the criteria promulgated by the NAVDOCKS P-80, the requirements of 22,680 square yards of bituminous hardstand category code 852-11, and 540 square yards of concrete hardstand category code 852-10 are required for outside organizational vehicle parking space. A breakdown of outside vehicle parking requirements per unit was computed and listed above.

c. The new facilities are required to replace the existing semi-permanent facilities now being used which have been in existence some 20 to 25 years. These buildings are old, and constructed during an era when construction codes were minimal. The buildings now being used as combat vehicle maintenance facilities have the following deficiencies:

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 1 Oct 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-196	2D ECHELON COMBAT VEH FACILITIES - 2D DIVISION (HADNOT POINT)

(Continued:)

(1) Spaces: Bench space is restricted and parts rooms and tool rooms are insufficient and inadequate. Office space is lacking because of inadequate space, and dispatchers often work under adverse conditions. Repair areas are inadequate, since these structures were primarily built as temporary and semi-permanent storage buildings.

(2) Telephone Service: Notable in the Infantry Regiment areas, telephone services are totally inadequate. In these areas, one telephone number serves two Battalion maintenance facilities located in different structures.

(3) Electrical Power: Inadequate facilities for transmission of electrical power in all areas. Some shops have no electrical receptacles, due to inadequate power supply.

(4) Lighting: Lighting in many cases consists of a naked incandescent bulb suspended from the ceiling. Bench lamps are insufficient.

(5) Heating: Heating consists of kerosene space heaters which fail to heat the shop, monopolize valuable space and are a safety hazard.

(6) Head/Locker Facilities: In most areas, no head facilities are available.

(7) Lubrication Facilities: Compressed air is not available therefore many vehicles must be lubricated by hand.

(8) Mechanical Ventilation System: In most shops none is available and inadequate electrical power precludes the installation.

(9) Washing Facilities: Washing areas in the Infantry Regiment are inadequate or nonexistent. Drainage is poor.

(10) Parking and Hardstands: Most parking areas are inadequate due to crowded conditions. Few have asphalt or concrete surfaces.

11. Justification for the Type of Construction Planned.

a. As pointed out in paragraph 10, the 2d Marine Division is now performing maintenance on its combat vehicles in some structures which prove to be little more than a lean-to facility with little or no utilities.

b. The combat readiness of the Marine Corps and its major elements has proved a vital defense to the United States, Without facilities to perform its combat vehicle maintenance, this defense could be impaired.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 1 Oct 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-196	2D ECHELON COMBAT VEH FACILITIES - 2D DIVISION (HADNOT POINT)

(Continued:)

12. Alternate Solution.

a. There are no foreseeable solutions to resolve this requirement which could be adopted. The present facilities at Camp Lejeune are being utilized to the maximum extent possible.

b. All of the buildings at Camp Lejeune are of the same vintage. To attempt to modify any other structure would be an exorbitant waste of time and funds.

13. Plans for Facilities Being Replaced. Buildings to be replaced by the construction of the new maintenance facilities:

UNIT	BLDG #	AREA #	SQFT	YEAR CONSTRUCTED	TYPE OF CONSTRUCTION	PROPOSED DISPOSITION
2d Reconnaissance Btn	BA130 *	*	4,000	1953	S	Retained as Storage Facility
2d Shore Party Btn	1804	3	8,000	1951	S	Retained as Storage Facility
2nd Service Btn	1817	3	12,000	1952	T	Retained as Storage Facility
Headquarters Btn	1406	1	4,396	1942	P	Returned to MCB

* Located at Onslow Beach

a. The Hadnot Point Area of Camp Lejeune has been divided into 4 areas where the 2d Marine Division occupies combat vehicle maintenance facilities. Those facilities located in area #1 are categorized as "permanent" type facilities of concrete block construction. It is planned to relinquish these buildings to Marine Corps Base for their designed use as warehouses.

b. Area #2 will be retained as 2d Marine Division real estate.

c. Area #3 is a conglomeration of semi-permanent and temporary buildings, predominantly Butler Buildings. There are no permanent buildings in the area #3 complex. Proposed future military construction plans will require raising of some Butler Buildings within area #3 to permit construction of new facilities.

d. Area #4 is a wooded area which is under consideration for development as the new "2d Marine Division Industrial Area Complex". A topographic survey has been conducted in this area.

25. REQUIREMENT FOR LINE ITEM

There are 21 administration buildings in the 5 regimental areas at Hadnot Point that were built in 1942 and 1943 as division, regimental and battalion headquarters and administration buildings. The buildings are of permanent construction, and are structurally sound but are substandard due to the lack of air conditioning and inadequate lighting. Air conditioning is authorized when the wet bulb temperature exceeds 67° F for more than 2,200 hours per year. Camp LeJeune averages 2,898 hours per year that exceed 67° F wet bulb temperature. This project is the first increment in the remodeling of all 21 administration buildings for the 2nd division. The remodeling of the administration building is to be scheduled in conjunction with the rehabilitation of the barracks in the battalion area.

DD FORM 1 JUL 62 1391

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
1 OCT 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE	
P-800	REHAB ADMINISTRATION BLDG #315	(HADNOT POINT)

1. Function to be Performed. An administration building for the command and control of a battalion of the 10th Marines.

2. Necessity for Performing This Function. The battalion H & S Company has the responsibility for maintaining the records and requisitions for all personnel assigned to the battalion.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function. There are 15 battalion administration buildings in the 5 regimental areas assigned to the 2nd Division. All of these buildings were built in 1942 and 1943 and are in good repair and are structurally sound. To consolidate the 2nd Division in these 5 regimental areas will require the retention and remodeling of all of the existing administration buildings in this area. There are other similar buildings in other areas of the base that are to be utilized for other command functions, but there is no other area where the 2nd Division command could be consolidated with existing facilities more adequate.

4. Current and Planned Future Workload With Regard to This Function. An average of 8 to 9 hours per day for a 5-day work week is required to maintain personnel records and schedules, and to requisition materials and supplies at the battalion level. There is no indication that the present work load would be reduced in the foreseeable future.

5. Description of Construction Being Requested. The existing administration buildings built in 1942 are not air conditioned and existing lighting is not adequate for the type of work being performed. Remodeling of the building with a central air conditioning and heating system, a new ceiling, new lighting, and an electrical distribution panel is proposed to offset the substandard conditions of the administration buildings. Chilled water for air conditioning shall be furnished from a central system.

6. List of Collateral Equipment to Be Included in the Line Item.

1. Central heating and air conditioning system.

7. List of Collateral Equipment Associated With, but Not Included in, Line Item. The existing desks, chairs, files and other related office equipment is to be inventoried and evaluated to determine the additional collateral equipment requirements.

8. Justification for the New Facility. Air conditioning is authorized when the wet bulb temperature exceeds 67° F for more than 2,200 hours per year. Camp LeJeune averages 2,898 hours per year that exceeds 67° F wet bulb temperature. Existing administration facilities can be remodeled and air conditioned to provide adequate facilities with improved working conditions for less than one-half the cost of new facilities.

9. Effects if the New Facility is Not Provided. If the existing administration buildings are not improved and air conditioned, personnel will have to continue to work in substandard facilities in a very humid and hot environment that affects the quality and the efficiency of the work being performed.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
1 OCT 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-800	REHAB ADMINISTRATION BLDG #315 (HADNOT POINT)

10. Justification for the Size and Scope of the New Facility. This is the 1st increment and the first of 21 administration buildings in the 2nd Division area that are scheduled for remodeling and air conditioning. It is more economical to remodel and air condition the existing facilities than to build new administration buildings.

11. Justification for the Type of Construction Planned. A central chilled water system is planned for the 5 regimental areas. Supplying chilled water to all buildings in the area requiring air conditioning from a central system will offer the greatest diversity and a reduction in the total air conditioning tonnage requirements, and it will also reduce maintenance requirements.

12. Alternate Solutions. There are no alternate solutions that would be more economical or justifiable.

13. Plans for Facilities Being Replaced. Existing facilities are being remodeled.

14. Status of Preliminary Engineering. No preliminary engineering report has been started.

15. Sketch Showing Planned Location of the New Facility. Enclosure (1)

16. Other Graphic Presentations, Including Photographs. None

17. Potential Flood Hazards. Requirements of Executive Order No. 11296 (Flood hazards)are not applicable.

18. Pollution Prevention, Abatement and Control. This item will not cause additional air or water pollution.

25. REQUIREMENT FOR LINE ITEM

Providing completely livable quarters for bachelor personnel with adequate space and facilities conforming to present criteria is the policy of the Department of Defense. Existing barracks are substandard by the new criteria and are programmed for rehabilitation. After rehabilitation, the 60 barracks in the 5 regimental areas will provide space for only 6,960 men. To consolidate all E2's thru E5's in the 2nd Division in this area, barracks space for 11,460 men is required. This line item is the 1st of 9 increments that is planned to provide 30 new barracks in the 2nd MarDiv area.

DD FORM 1 JUL 62 1391

BOOK NO.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
13 SEPT 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-802	ENLISTED MENS BARRACKS, 1ST INCREMENT (HADNOT POINT)

1. Function to be Performed. Provide adequate billeting for enlisted personnel in quarters conforming to present criteria.

2. Necessity for Performing This Function. It is the Department of Defense policy to provide adequate barracks for enlisted personnel. In line with this, new criteria are continually being developed to improve the habitability of barracks and considerable emphasis is currently being placed upon improving existing substandard barracks, and/or construction of new modern barracks to replace those which cannot be economically rehabilitated and to satisfy deficiency requirements for bachelor enlisted personnel who must be billeted aboard the base.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function. All of the existing barracks at Camp LeJeune are substandard by the new criteria for bachelor housing accommodations except for barracks recently completed for force troops in the French Creek area. In the five regimental areas at Hadnot Point there are 60 barracks of the H Type. Consolidation of the 2nd Marine Division in these areas is planned. All 60 barracks are to be rehabilitated to conform to the new criteria. All other barracks of this type on the base are also to be rehabilitated and retained. There are no other barracks on the base that can be used to perform this function.

4. Current and Planned Future Workload With Regard to This Function. The planned workload for enlisted men billeting requirements in the 2nd Marine Division is 11,708 men.

5. Description of Construction Being Requested. This line item provides for the construction of 2 new barracks buildings to offset the deficiency of bachelor housing accommodations that will exist in the battalion when existing barracks are rehabilitated. 2-men rooms for E-5 grade personnel and 3-men rooms for E-4 and under grade personnel are to be provided to conform to the present criteria. The buildings shall be of masonry construction with a steel frame structure, poured concrete floors over a steel truss system, and a built-up insulated roof deck. The buildings shall be air conditioned from a central system and heated from the central steam plant. Duration of the need for the barracks is indefinite.

6. List of Collateral Equipment to Be Included in the Line Item.

Heating & Air Conditioning	125 Tons	110,000	110,000
Water Cooler, Electric	12 @ 150.00	1,800	1,800
Screens, Door	4 @ 10.00	40	40
Screens, Window	200 @ 4.00	800	800
Total		112,640	112,640

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
13 SEPT 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-802	ENLISTED MENS BARRACKS, 1ST INCREMENT (HADNOT POINT)

7. List of Collateral Equipment Associated With, but Not Included in, Line Item.

Item Description	Quantity	Unit Price	Total Price
Wardrobe	300	$225.00	$ 67,500
Bunks w/mattress-springs- pillows & linen	300	50.00	15,000
Desk	300	100.00	30,000
Chair (Desk Type)	300	18.00	5,400
Total			$117,900

8. Justification for the New Facility. Providing completely livable bachelor mens quarters with adequate space and facilities conforming to present day criteria is the policy of the Department of Defense. This project is intended to offset part of the total deficiency that will exist when existing barracks are rehabilitated to the new criteria. Air conditioning is authorized when the wet bulb temperature of 67° F exceeds 2,200 hours per year. Camp LeJeune averages 2,892 hours per year that exceed this temperature. This line item represents the first of a series of increments that is planned to satisfy the EM housing deficiency. This is essential to avoid closing too many barracks simultaneously during construction.

9. Effects if the New Facility is Not Provided. If this line item is not provided personnel will continue to be billeted in substandard quarters.

10. Justification for the Size and Scope of the New Facility. The size of the rooms in the new barracks will conform to present criteria for the grades involved.

11. Justification for the Type of Construction Planned. The type of new construction must match that of the existing buildings.

12. Alternate Solutions. There are no alternate solutions.

13. Plans for Facilities Being Replaced. No facilities are being replaced by the planned construction.

14. Status of Preliminary Engineering. No preliminary engineering has been performed other than developing the floor plans and preliminary programming estimates.

15. Sketch Showing Planned Location of the New Facility. Enclosure (1).

25. REQUIREMENT FOR LINE ITEM

The change to cafeteria operation of the messhall has created an excess of dining space in each messhall. Two 800 square feet classrooms in each end of the messhall can be provided to utilize the excess space and also offset the deficiency which exists for academic and general instruction space. Air conditioning is required because Camp Lejeune has 2,898 hours per year that exceed 67° wet bulb temperature. Air conditioning is authorized when the wet bulb temperature of 67° F exceeds 2200 hours per year. Complete utilization of the space justifies the air conditioning system. Remodeling of the building with new wiring, lighting and ceiling for the classrooms can be provided at less than 1/2 the cost of building new facilities. Repairs to the messhall is economically justifiable. This item will not cause additional air or water pollution.

BOOK NO. ——— PAGE NO. ———

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-803	REHAB EXIST MESSHALL BLDG #307

1. Function to be Performed. Improve substandard conditions in the Messhalls, air condition the dining area, and utilize excess space in the Messhalls for academic and general instruction classrooms.

2. Necessity for Performing this Function. Air conditioning of the dining areas is required to eliminate the hot and humid conditions that exceed a 67° wet bulb temperature for an average of 2,898 hours per year.

3. List of Existing and Authorized Facilities Similar to the New Facility Requested Which Can Be Used for Performing this Function. N/A

4. Current and Planned Future Workload with Regard to This Function. The Messhalls are in daily use serving three meals daily and all Messhalls are conveniently located to serve a battalion area.

5. Description of Construction Being Requested. Permanent installation of air conditioning, requiring some alterations to construct 2 - 800 sq. st. classrooms on each end of the dining area, new lighting and electrical distribution panels, and remodeling and repair of other substandard conditions.

6. List of Collateral Equipment Associated with but not Included in Line Item. N/A.

7. List of Collateral Equipment to be Included in Line Item. N/A.

8. Justification for the New Facility. Air conditioning is authorized when the wet bulb temperature exceeds 67° F. for more than 2200 hours per year. Camp LeJeune has 2,898 hours per year exceeding a wet bulb temperature of 67° F. Air conditioning of Messhalls is an important morale factor in that environmental conditions would be improved in the Messhalls and absenteeism from meals would be decreased and health and eating standards would be improved.

9. Effects if the New Facility is Not Provided. Continued discomfort while eating and a loss of appetite due to high humidity and heat during summer months.

10. Justification for the Size and Scope of the New Facility. This is the 1st increment in the remodeling of 15 Messhalls in the five regimental areas. This project is being scheduled in conjunction with the remodeling and rehabilitating of other buildings within the Battalion area, while the personnel is relocated for rehab of barracks.

11. Justification for the Type of Construction Planned. There is one Messhall in each battalion area that averages feeding approximately 2,200 meals daily per Messhall. The Messhalls are of permanent construction, structurally sound and are conveniently located. It is economically feasible to remodel and retain all 15 Messhalls and utilize excess space for classrooms.

19. DESCRIPTION OF WORK TO BE DONE

Construct an 80'x38' addition to the existing laundry building (#1500). The addition will be concrete block walls on reinforced concrete foundation. Floor will be concrete slab on-grade at same elevation as existing floor. Roof to be steel frame with open web joist with metal deck and built-up roof. Existing building to be ventilated and rehab as required.

24. RELATED LINE ITEMS

25. REQUIREMENT FOR LINE ITEM This project is necessary to provide adequate separate space for operating areas, storage areas, and shipping (including pre-shipping storage) areas. It has been found impossible to adequately separate these above three functions within the present space limitations. A satisfactory solution is primarily dependent on provisions of of adequate space to support the functions as separate functions. Positive separation of the operating areas, storage areas, and shipping (including Pre-shipping) will increase overall efficiency by correction of the existing crowded and intermingled conditions, permit proper storage, care and issue of operating supplies, and provide the shipping department with adequate space for efficient pre-shipment storage and shipment of finished items. Overall efficiency will be improved through elimination of backtracking, bottlenecks, and fire and personnel hazards. Truck waiting time will be eliminated or greatly reduced by provision of one additional outloading station for truck pick-up service. Approximately 3070 square feet of additional space is required to correct these conditions. The proposed project is the most feasible of the possible alternatives which will satisfy the requirement. No existing facilities are available for expansion of the laundry. Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable. This item will not cause air or water pollution.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 2 NOV 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-136	RENOVATION AND ADDITION TO LAUNDRY - BLDG #1500 (HADNOT POINT)

1. Function to be Performed. The functions to be performed are the assembling, storage and shipping of cleaned fabrics.

2. Necessity for Performing This Function. It is necessary for this function to be performed in order that fabrics can be returned to the rightful custodian within a reasonable time.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function. There is no existing authorized facility for this function, nor can one be made available aside from this request that will be practical or economical.

4. Current and Planned Future Workload With Regard to This Function. The current workload will require the utilization of 88% of the floor space that will be made available by this addition. It is expected that 100% of the available space will be utilized within the next year.

5. Description of Construction Being Requested. Duration of need is indefinite. The new addition will be 80'-1½" x 38'-4" and will fill in a rectangular opening between two wings. Three walls will be common with the existing building except for a bit of new wall at the top of the 38'-4" walls to bring the roof up to the proper elevation. The 80'-1½" common wall has 8 windows which must be blocked up because they come at roof level. Two door openings must be cut into this wall also to provide openings for ramps to the main floor of the laundry. A door opening must also be cut into the 38'-4" wall between the new addition and the existing shipping and receiving room. The floor will be concrete slab on-grade at the same elevation as the existing shipping and receiving room floor (approximately 2'-0" fill required). The new wall will be masonry with stucco exterior to match the existing building. Three large doors for truck loading and unloading are required in the new wall. Construction will be similar to the existing building. The roof will be supported by open web bar joists on steel frame and will be metal roof deck with light weight concrete fill and built-up roofing. Continuous loading platform will be provided along the entire front.

6. List of Collateral Equipment to Be Included in the Line Item. No collateral equipment will be needed.

7. List of Collateral Equipment Associated With, but Not Included in, Line Item. No collateral equipment of this type will be needed.

8. Justification for the New Facility.

a. Reasons why Project should be done: The present laundry building was constructed in 1941 and was originally built and equipped to service about 20,000 troops or to process 24,700 pounds of laundry per day. For several years the laundry has serviced 30,000 to 35,000 troops and their dependents. During this period additional operating equipment has been procured and installed for producing the required increased workload. The laundry now processes as high as 40,000 pounds per day and habitually ships an average of 29,400 pounds per day. This increase in workload, increase in installed machinery and increase in number of operating personnel has not been

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 2 NOV 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-136	RENOVATION AND ADDITION TO LAUNDRY - BLDG #1500 (HADNOT POINT)

(Cont'd)

accompanied by an adequate increase in operating space. The increased space need for machinery has previously been met by encroaching upon normal storage areas for work that is in process in the pressing section in the plant. Shipping department space was encroached in the same manner by the installation of flatwork ironer, resulting in crowded conditions, pre-empting of space and lessening of overall efficiency in the shipping department. All previous attempts to balance the workload assembly, storage and shipping problems within the existing space have not produced a satisfactory solution. The three functions of operation; assembly, storage and shipping are inseparably intermingled due to lack of sufficient space to effectively separate these functions within the present space limitations.

b. Description of Existing Conditions: The shipping department has been crowded out to such extent that the shipping area is inadequate. Clean articles of clothing, pending pick-up by customers, are now stored in active work areas. This results in congested work areas and aisles, workload bottlenecks, backtracking, reduction in employee and machinery production and increased fire hazards and hazards to safety of personnel. At present the laundry is unable to completely separate the pre-shipment storage of clean government linen exchange items (fast moving items) from deferred items (slow moving items) which causes unnecessary relocation of either one class items or the other prior to shipping. The shipping department has only one exterior door from which items can be shipped; therefore, only one truck at a time can be loaded. This results in delay in serving activities and delays motor transport trucks for extended periods while waiting turn to load. The various efforts to improve conditions resulting from this workload-storage-shipping-space problem have not produced a solution satisfactory to all factors. The total square footage of the original appropriated shipping department was 1867 square feet, of which 785 square feet has been encroached upon and occupied by production equipment, leaving only 1082 square feet which is inadequate. In fact, in recent years it has become necessary to inconveniently transfer the assembly, storage and shipping of messhall fabrics to another building (No. 1501) across the street. This function required the assignment of three additional military personnel to perform this function. This work could very well be performed with the present laundry personnel if sufficient work and storage space was available in a centralized area in building 1500.

c. Necessity for Correcting or Altering Existing Conditions: Since it has been found impossible to adequately separate the above three functions within the present space limitations, it appears that a satisfactory solution is primarily dependent on provisions of adequate space to support the functions as separate functions. Positive separation of the operating areas, flatwork ironing, storage and shipping, will increase overall efficiency by correction of the existing crowded and intermingled conditions, permit proper storage, care, and issue of finished items. Overall efficiency will be improved through elimination of backtracking, bottlenecks, and fire and personnel hazards. Truck waiting time will be eliminated or greatly reduced by provision of additional outloading stations for truck pick-up service. Approximately 3100 square feet of additional space is required to correct these conditions.

d. Estimated reduction in annual maintenance cost if project is accomplished: The present confused and intermingled conditions result in laundry trucks damaging concrete block walls, doors, machinery and the concrete floor due to constant back-tracking, relocation of products and restricted rolling space. It is estimated that elimination of this excessive laundry truck movement will result in reduction in building maintenance cost of from $300 to $500 per year in reduction of damage to items noted above.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 2 NOV 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE	
P-136	RENOVATION AND ADDITION TO LAUNDRY - BLDG #1500	(HADNOT POINT)

(Cont'd)

e. Functional advantages: The provisions of a separate shipping section will provide control of linen inventories and will prevent the frequent unloading and recounting truck loads of garments. Provision of additional doors (in lieu of the existing one door) will expedite loading out trucks. Adequate shipping space will eliminate the rehandling and relocation of fast and slow moving items. Working conditions and hence efficiency will improve with relief from present crowded and congested conditions. Excessive movement of laundry trucks (backtracking) will be eliminated resulting in increased efficiency of personnel and reduction in damage to the building and equipment.

f. Urgency: Numerous and continuing efforts have been made to correct the operating condition indicated above within the existing space limitations. These efforts have not produced results which were satisfactory for all functions involved. In order to correct the conditions, additional space must be provided for efficient performance of all functions. Further delay in taking positive corrective action in the conditions enumerated above will result in the continuation of all the unsatisfactory conditions above. It is concluded that corrective action should be taken as soon as possible.

g. Date requirement became known: Requirement was known several months before 1961, the year the request was initiated for this construction. Numerous efforts were made within the existing space limitations to correct the conditions. An adequate solution has not been found within these present limitations.

h. Workload, event or other action which created the requirement: No specific event has occured to create the requirement other than the gradual increase in workload and addition of operating machinery over the years for which no additional space has been provided. The original laundry building was constructed in 1941. Need for additional space must have soon been evident since Extension No. 1 (5,293 SF) was added prior to 1944. Extension No. 2 (2,620 SF) was added about 1944-45. No additions have been made in the ensuing years to date.

9. Effects if the New Facility is Not Provided. The unsatisfactory and costly conditions enumerated above will continue to exist into the indefinite future.

10. Justification for the Size and Scope of the New Facility. About 3100 square feet of additional space is needed to overcome the problems enumerated above. To provide this space by connecting the two portions of the present building as indicated on the attached sketch will be the most economical construction.

11. Justification for the Type of Construction Planned. The present building is constructed of clay tile blocks and brick; therefore, the addition should be constructed of concrete blocks and brick because of the duration of the continued need of this facility.

12. Alternate Solutions. There are no alternate solutions to be considered that will provide adequate space for this function.

2. Ref. Col. 13 - xx/ is the number of an explanatory note following the itemized listing of facilities.

Marine Corps Base, Camp Lejuene, North Carolina | ACTIVITY CODE 8270-175 | NAVAL DISTRICT OR AREA 5 ND | FROM STATUS IF OTHER THAN INITIAL ISSUE [X] REVISED CHANGE NO. | DATE PREPARED 1 OCTOBER 1968

CATEGORY CODE	BUILDING NUMBER	PROPERTY RECORD CARD	CURRENT USE	DESIGNED USE	USING ACTIVITY	TYPE CONSTR.	CONDITION CODE	UNIT OF MEAS.	QUANTITY OF ASSETS TOTAL	QUANTITY OF ASSETS VACANT	QUANTITY OF ASSETS SUB-STANDARD	REMARKS
1	2	3	4	5	6	7	8	9	10	11	12	13

1. Requires rewiring and lighting to bring up to acceptable standards.
2. Substandard on basis of lack of air conditioning.
3. Requires rewiring, lighting, and ventilation to bring up to acceptable standards.
4. Beyond economical repair.
5. Acoustics materials needed to make building suitable for use.
6. Building lacks sufficient space to carry on designated purpose.
7. Requires heating to bring up to acceptable standards.
8. Facility is not suitable for ist present use because of its general poor condition.
9. Facility lacks adequate ventilation.
10. Inadequate existing air conditioning requiring increase in capacity or installation of central system.
11. Inadequate due to very poor plumbing and electrical systems.
12. Facility is substandard due to the need for repair of either the floor, the roof, or the walls.
13. Facility is substandard due to the need for repair of either the floor, the roof, or the walls along with need for rewiring.
14. Building is inadequate because the layout of the building, as well as the existing facilities, are not suitable for the present use of the building.
15. Building lacks adequate plumbing facilities.
16. Building lacks adequate head and plumbing facilities.
17. All these helicopter landing pads are unpaved except for a concrete cross to mark the site imbedded in the ground. The cross has an arearea of 69 SY. The remaining area is turf.

Supersedes OPNAV FORM 11000- for Marine Corps Use. *Reference: Current edition of MCO 11010.12*

25. REQUIREMENT FOR LINE ITEM

The Marine Corps Base includes seven administrative, operational and troop housing areas which form a circular pattern on both sides of New River. Distance between areas varies from 5 to 15 miles, with a total perimeter distance of 68 miles. Force Troops units are dispersed through all these areas (except Rifle Range), and are superimposed on facilities assigned to units of the other commands. Force Troops combat units do not have facilities which are appropriate for the care and maintenance of the specialized equipment assigned. The above conditions result in lowering the effectiveness of command and the ability to maintain combat readiness. In order to permit maximum effectiveness, it is necessary to consolidate all units of Force Troops in one area equipped with suitable facilities. Provision for equipment maintenance facilities is required in the development of the new consolidated area. Failure to provide these requested maintenance facilities will result in improper maintenance, costly parts replacement, loss of man hours, high deadline rates, and incalculable cost of decreased combat readiness. This item will not cause additional water pollution. The air pollution caused by this item will be abated in accordance with Executive Order No. 11282 (Air Pollution) by corrective measures included as part of this line item. Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable.

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-054	COMBAT VEHICLE MAINTENANCE FACILITY (FRENCH CREEK)

1. Function to be Performed. To provide a first, second, and limited third echelon maintenance and parking facility for wheeled vehicles, ordnance equipment, engineer equipment, fire control, and optical instruments of communications of the Second Tank Battalion.

2. Necessity for Performing This Function. To provide adequate facilities, where efficient, (2nd/3rd Echelon) Combat Vehicle maintenance can be performed.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function.

a. There is a similar facility being constructed at Camp Pendleton, California.

b. The structures presently in use for current equipment maintenance facilities are of temporary construction. They have been expediently rehabilitated or modified to fill the required equipment facility requirements as functionally as possible with what is available. Descriptive data is as follows:

(1) Building 1819.

(a) Motor Transport operations, maintenance, OVE storage and repair including mezzanine 5,941 sq. ft.

(b) Butler building with concrete floor. Constructed 1951, cost $25,831.00.

(2) Building 1820.

(a) Emergency treatment facilities 300 sq. ft.

(b) Head 660 sq. ft.

(c) Total 960 sq. ft.

(d) Quonset building with concrete floor. Constructed 1951, cost $17,620.00

(3) Building 1831.

(a) Supply operations 1,961 sq. ft.

(b) Ready issue & parts 2,000 sq. ft.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION

P-054		COMBAT VEHICLE MAINTENANCE FACILITY		

(FRENCH CREEK)

(continued)

(c) Total 3,961 sq. ft.

(d) Butler building with concrete floor. Constructed 1951, cost $17,155.00

(4) Building 1832.

(a) Battalion tank, ordnance and engineer equipment maintenance and repair 8,000 sq. ft.

(b) Mezzanine 1,312 sq. ft.

(c) Total 9,312 sq. ft.

(d) Butler building with concrete floor.. Constructed 1952, cost $23,938.00.

(5) Building 1833.

(a) Companies "A", "B", and H&S Tank OVE, weapons, optics and communications storage, maintenance and repair facilities 6,957 sq. ft.

(b) Operational deployment supplies and Mount-out supplies for the Battalion and Companies 5,043 sq. ft.

(c) Total 12,000 sq. ft.

(d) Butler building with concrete floor. Constructed 1951, cost $38,788.00.

(6) Building 1835.

(a) Battalion Communications/Electronics maintenance and equipment storage 3,120 sq. ft.

(b) Mezzanine to be included in long-term storage area 960 sq. ft.

(c) Company "C" Tank OVE, weapons and optics storage, maintenance and repair area, 4,880 sq. ft.

(d) Total 8,960 sq. ft.

TC-862	Camp Geiger	Temp (Butler)	2d Force Recon
TC-862	Camp Geiger	Temp (Butler)	2d Topo Co.

4. Current and Planned Future Workload With Regard to This Function.

a. Weapons and equipment density.

(1) Small Arms (less than 20mm) 1,013.

(2) Guns (20mm and up to 240mm) 85.

(3) Fire Control and Optical Instruments 17,024.

b. Vehicle and equipment density.

(1) Tracked Vehicles (maximum weight 65 tons) 85.

(2) Wheeled Vehicles 169.

(3) Compressor and Mixers 8.

(4) Generators and Engineer equipment 11.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 30 DEC 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA
5. LINE ITEM NUMBER		6. LINE ITEM TITLE		
P-054		COMBAT VEHICLE MAINTENANCE FACILITY		(FRENCH CREEK)

(continued)

c. Battalion Service Platoon Personnel strengths to utilize maintenance facilities.

(1) Comm/Elec 2 Off. 34 Enl.

(2) Maint 4 Off. 69 Enl.

(3) Motor Trans 1 Off. 111 Enl.

(4) Supply 2 Off. 41 Enl.

(5) Total 9 Off. 255 Enl.

d. Company Personnel strengths to utilize company tank maintenance facilities.

H&S Co.	1 Off. 52 Enl.
Co. "A	5 Off. 97 Enl.
Co. "B"	5 Off. 97 Enl.
Co. "C"	5 Off. 114 Enl.
Co. "D"	5 Off. 97 Enl.
Total	21 Off. 457 Enl.

e. The T/O personnel strengths of this battalion over the last twelve months reflect that the battalion has been as high as 250 men over strength. There have been at least 3 officers and 86 men on constant contingence deployment plus the occasional doubled deployment to effect a contact relief. However, it should also be pointed out that this organization hosts annual training duty equipment and facilities for reserve tank and maintenance units during the summer months.

f. The planned future workload is anticipated to increase with the addition of the fourth tank company in addition to the rapid turnover of personnel. In addition, the complex equipment dictates that training of new personnel must be conducted as expeditiously as possible for which adequate facilities are most necessary.

5. Description of Construction Being Requested.

a. Duration of need is indefinite. All structures are to be of masonry construction conforming with the general development plan of the Force Troops Complex.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 30 DEC 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-054	COMBAT VEHICLE MAINTENANCE FACILITY (FRENCH CREEK)

(continued)

b. The main building will be the Battalion Maintenance Building. It will provide facilities for the battalion's support platoons, i.e. Tank Maintenance; Motor Transport operations and maintenance; Communications/Electronic operations and maintenance; Engineer maintenance; Ordnance; and Supply operational parts and administrative. The building will also provide direct and indirect support requirements to support the maintenance areas.

c. Five Tank Company Maintenance Facilities encompassing a gross square foot floor area of 6,050 square feet each.

d. Tank Refueling Facilities capable of dispensing both MOGAS and Diesel with a minimum capacity of 5,000 gallon MOGAS and 15,000 gallons Diesel.

e. Motor Transport Refueling Facilities capable of dispensing both MOGAS and Diesel with a minimum capacity of 5,000 gallons MOGAS and 5,000 gallons Diesel.

f. Both tracked and wheeled vehicle suspension washing pad facilities equipped with high pressure water hoses arranged and capable of quick efficient vehicle suspension cleaning.

g. Wheeled Vehicle Parking Facilities providing a total parking area of 6,468 square yards.

h. Tracked Vehicle Parking Facilities providing a 20 feet by 55 feet parking pad for each tracked vehicle plus ingress and egress to the pads. Total park area 49,720 square yards.

i. Tracked Vehicle Deadlined Equipment Parking Facilities for tracked vehicles consisting of 480 square yards.

j. Wheeled Vehicle Deadline Equipment Parking Facilities consisting of 510 square yards.

k. Specific details relating to structural requirements are as follows:

(1) Floor: Reinforced concrete capable of supporting a 65-ton tracked vehicle in all tracked vehicle maintenance areas including the Comm/Elec bay. All others capable of normal weights up to 10 tons.

(2) Walls: All walls of standard masonry units. Walls encompassing office and administrative spaces should be of sound suppresent quality and construction.

(3) Tank Maintenance repair bays must be obstruction free to allow the 90 degree traverse of the tank turret to allow the power pack removal and replacement. Minimum depth of tank maintenance bays head to head must be 70 feet.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 30 DEC 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-054	COMBAT VEHICLE MAINTENANCE FACILITY (FRENCH CREEK)

(continued)

(4) Windows: Aluminum or steel sash awning type.

(5) Doors: All passage doors to be solid wood or metal. All vehicular or service doors to be metal overhead roller type.

(6) Electrical: Optimum fluorescent illumination in all areas plus sufficient wall plugs for trouble lights and portable electrical tools. Voltage to be 110 volts and 220 volt single and three-phase service to accommodate electrical equipment, in addition to communication repair shops at battalion and each company facility 400 cycle 220 volts. Provide protective cross line starters for all machinery.

(7) Paving: Reinforced concrete capable of supporting a 65-ton tracked vehicle in all areas to service tracked vehicles including routes of ingress and egress. All other areas supporting vehicle traffic are to be bituminous paving.

(8) Combustible/Flammable Storage Building is to be equipped with an automatic fire extinguishing and fire alarm system.

(9) Install a treadle operated flush shower in the battery servicing room.

(10) Install centralized lubrication system.

(11) Landscape and provide connecting roadways to nearest road.

(12) Armories: Must be dehumidified, in addition to provide weapons and optics storage facilities and a work bench.

6. List of Collateral Equipment to Be Included in the Line Item.

a. General instructions to apply to all buildings:

(1) Air conditioning in all office spaces and the Comm/Electronics maintenance and operations areas.

(2) Central heating of all spaces as much as practical.

(3) Telephone - one per office-separate numbers.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 30 DEC 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-054	COMBAT VEHICLE MAINTENANCE FACILITY (FRENCH CREEK)

(continued)

(4) Electrically operated water cooler - one per shop space.

(5) Central lubrication dispersing system.

(6) Built-in or portable wooden topped work benches in each maintenance bay and separate maintenance areas.

(7) Exhaust fans in vehicle maintenance areas, battery shop, and combustible/flammable storage areas.

(8) Appropriate automatic fire extinguishing and alarm systems in all areas.

b. Tank Battalion and Company Combat Maintenance Facilities. Install and provide collateral equipment listed in Definitive Designs 214-10, NAVDOCKS P-272 plus include 70' bridge crane with minimum capacity of five tons.

c. Automatic Vehicle Maintenance Facilities. Install and provide collateral equipment listed in Definitive Designs 214-20 NAVDOCKS P-272 for a four bay facility.

d. Refueling Vehicle Maintenance Facility. Install and provide collateral equipment listed in Definitive Designs 214-20 NAVDOCKS P-272 for two repair stalls.

e. Communications/Electronics Maintenance Shops. Install 400 cycle, 220 volt power source for radio repair facilities in company and battalion shops.

7. List of Collateral Equipment Associated With, but Not Included in, Line Item. All items to be used are on hand or are authorized this command either by Table of Equipment or Table of Allowance.

8. Justification for the New Facility. Keeping in mind that Shore Establishments exist to serve the operation forces, this new facility is fully-justified particularly considering the fact that the present tank is twice the size and weight of the vehicle initially using the present facilities. As a result, the present facilities lack size and capacity.

9. Effects if the New Facility is Not Provided. The Marine Division Forces will continue to receive the high degree of competent tank support, that it has enjoyed in the past. However, additional space will have to be made available for the fourth Gun Tank Company. Furthermore, the morale and efficiency gained with new facilities could not be realized.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 30 DEC 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

(continued)

10. Justification for the Size and Scope of the New Facility.

a. The Facilities Planning Factors for Naval Shore Activities NAVDOCKS P-80 was used as the basic doctrine for establishing the space requirements for the new facilities. In addition, Definitive Designs NAVDOCKS P-272 and Department of the Army Definitive Designs were used for arrangement and space allocation.

b. Utilizing the above factors the following space factors were established:

(1) 214-10 Combat Vehicle Maintenance Facility:

(a) Battalion Tank, Engineer and Ordnance Maintenance Facility — 8,550 sq. ft.

(b) H&S Company Tank Maintenance Facility — 6,050 sq. ft.

Company "A"	6,050 sq. ft.
Company "B"	6,050 sq. ft.
Company "C"	6,050 sq. ft.
Company "D"	6,050 sq. ft.

(c) Total — 30,250 sq. ft.

38,800 sq. ft.

(2) 214-20 Automotive Vehicle Maintenance Facility.

Four Repair Bays	1,920 sq. ft.
Administrative and Indirect Support Areas	1,500 sq. ft.
Direct Support Areas	2,720 sq. ft.
Total	6,140 sq. ft.

(3) 214-30 Refueling Vehicle Maintenance Facility - three repair stalls — 1,600 sq. ft.

(4) 214-40 Vehicle Maintenance Shed - 98 pieces of self-propelled equipment — 1,260 sq. ft.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 30 DEC 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-054	COMBAT VEHICLE MAINTENANCE FACILITY (FRENCH CREEK)

(continued)

(5) 217-10 Electronics Maintenance Shops 2,500 sq. ft.

(6) Combustible/Flammable Storage 800 sq. ft.

(7) Motor Transport Parking Facilities 169 vehicles at 30 square yards per vehicle. Additional space is required because of the trucks. Five tons occupy 32 square yards as it stands, in addition the turning radius is essential.

(8) Tracked Vehicle Parking Facilities 85 vehicles with a 20-foot by 55-foot reinforced concrete pad capable of supporting a 65-ton tracked vehicle. There must be a minimum of 15 feet between each pad to allow the turret to be traversed without striking the adjacent vehicle during preventive maintenance servicing and vehicle operational checks required prior to and after vehicle operations. A metal shed four feet by ten feet by six feet high for storage of the approximately 1,500 pounds of OVE that does not require maximum security or dehumidified storage in the company building in addition essential vehicle cleaning and maintenance material. Access to the shed should be a 6' double door.

(9) Refueler Parking Facilities for nine refuelers and must be 100 feet from any other vehicles or facilities.

11. Justification for the Type of Construction Planned. The type construction planned will provide optimum durability and economy comensurate with anticipated indefinite requirements.

12. Alternate Solutions. No alternate solutions are considered feasible.

13. Plans for Facilities Being Replaced. All structures will be returned to the custodial control of the Commanding General, MCB, Camp LeJeune, North Carolina. All collateral equipment will be utilized in the new facility less space heaters.

14. Status of Preliminary Engineering. Preliminary engineering report has not been started.

15. Sketch Showing Planned Location of the New Facility. Enclosure (1).

16. Other Graphic Presentations, Including Photographs. None.

17. Potential Flood Hazards. Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable.

18. Pollution Prevention, Abatement and Control. The air pollution caused by this item will be abated in accordance with Executive Order No. 11282 (air pollution) by corrective measures included as part of this line item.

25. REQUIREMENT FOR LINE ITEM

At the present time there are no acceptable facilities available to Force Troops units for the care and storage of their equipment. Space in overcrowded buildings throughout the 2nd Marine Division area is being utilized as a stop-gap measure. This arrangement ham-strings the Force Troops units in carrying out their assigned mission, and places an unacceptable burden on the Division area storage facilities. Utilization of the present facilities will become even more undesirable and inefficient when units of Force Troops move into the new Force Troops area upon completion of the 1st Increment of construction in view of the increase in distance from organic equipment. Construction of new facilities is necessary to provide essential storage space for "mounting-out" equipment and housekeeping supplies incidental to the operation of each of the various Force Troops units. These units are equipped with specialized items in addition to regular equipment. This equipment, while used on a day-to-day basis, must be habitually maintained in a state of readiness for punctual "mount-out" excercises or emergencies. The proposed facilities are not for inert inventory, but for fast-moving items which must be available on an over-the-counter basis. This item will not cause additional water or air pollution. Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable.

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-055	GENERAL WAREHOUSE/RI (FRENCH CREEK)

(continued)

5. Description of Construction Being Requested. The estimated duration of need for these requested facilities is indefinite. The proposed construction should consist of two (2) one (1) story buildings, 60' X 225' X 2 = 27,000 Sq Ft. Using the same construction material and design as the General Warehouse-Ready Issue now under construction in Line Item P-028.

6. List of Collateral Equipment to Be Included in the Line Item.

A. Built-In:

(1) De-humidification system.

(2) Sprinkler System for fire protection.

(3) Required plumbing for head facilities.

(4) Water fountains (as required).

7. List of Collateral Equipment Associated With, but Not Included in, Line Item. None.

8. Justification for the New Facility. At the present time there are no acceptable facilities available to Force Troops units, for the care and storage of their equipments. Space in overcrowded buildings throughout the 2nd Marine Division area is being used as a stop-gap measure. This arrangement ham-strings the Force Troops units in carrying out their assigned missions, and places an unacceptable burden on the Division area storage facilities. Construction on new facilities is necessary to provide essential storage space for "Mounting-out equipment", organic equipment and housekeeping supplies incidental to the operation of each of the various Force Troops units. These units are equipped with specialized items in addition to regular equipment. This equipment, while used on a day-to-day basis, must be habitually maintanined in a state of readiness for punctual "mount-out" exercises or emergencies. The proposed facilities are not for inert inventory, but for fast moving items which must be available on an over-the-counter basis.

* BFRL as adjusted: see 11000-3

25. REQUIREMENT FOR LINE ITEM The existing facilities at Marine Corps Base, Camp LeJeune, were built to accommodate the Marine Corps Base and 2d Marine Division. Force Troops elements formerly occupied temporary facilities on the opposite side of New River from the Main Base. These facilities passed their useful economical life and it was necessary in the interest of economy to move the Force Troops units, superimposing them upon the Marine Corps Base and Division units and demolish the old temporary facilities. This situation has resulted in overloaded troop housing and messing facilities and dispersion of Force Troops elements throughout the Hadnot Point area. It is proposed to construct permanant barracks to accommodate all Force Troops personnel less those proposed for the first increment of barracks and 2d Amtrac Bn. which is located at Mile Hammock Bay area. The remaining requirement for barracks for the 2d increment is 5,669 men less 1,500, or a total of 4,169 men. These remaining units will be relocated to the new Force Troops area upon completion of the 2nd, 3rd, and 4th increment of construction. If this line item is not provided, personnel must continue to be superimposed upon the Marine Corps Base and 2nd MarDiv area in substandard and overcrowded quarters. This item will not cause additional air and water pollution. Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 30 DEC 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE	
P-061	EM BARRACKS, 2D INCR	(FRENCH CREEK)

1. Function to be Performed. The function to be performed is the berthing of enlisted men in barracks.

2. Necessity for Performing This Function. It is a Marine Corps policy that enlisted men at Marine Corps activities must be billeted in barracks.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function. This project will complete the 2d increment of new barracks to house all of Force Troops less the 2d Force Service Regiment and 2d Amphibian Tractor Battalion. The AmTrac Bn must be near the coastal waters to carry out training exercises, requiring this unit to be housed at MILE HAMMOCK BAY area. 2d Force Service Regiment will be housed at FRENCH CREEK area when 3rd and 4th increments are completed.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 30 DEC 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA
5. LINE ITEM NUMBER		6. LINE ITEM TITLE		
P-061		EM BARRACKS, 2D INCR		(FRENCH CREEK)

Total Capacity (Men)	4,320
Less Substandard	4,320
Total Adequate	0
Force Troops In Barracks	5,919

It is obvious from the above figures that Force Troops personnel are living in very crowded and unhealthy conditions, that can only be alleviated by providing adequate facilities.

4. Current and Planned Future Workload With Regard to This Function. The first increment of barracks (P-033, FY-66) furnished barracks for the berthing of 1,500 men. This increment furnishes barracks for the berthing of 1,620 men. Summation of requirements are listed below:

Total Force Troops	8,211
Less 2d FSR	2,572
Less 2d AmTrac Bn	873
	4,766
Personnel:	X 68
Permanent	3,241
Transient	216
Total Required	3,457
Less 1st increment	1,500
Required	1,957

5. Description of Construction Being Requested. The requested barracks should consist of six (6) permanent two story "T" type barracks with 270 man capacity using 2 & 3 man cubicles. They should provide administrative space for two (2) companies in each building, and should be constructed in design, and of materials compatible to surrounding buildings in the new Forces Troops Complex. Estimated duration of need for the new facility is indefinite.

6. List of Collateral Equipment to Be Included in the Line Item. The below listing of collateral equipment will be required in the new barracks.

a. Built-in equipment. Built-in furniture, including wardrobe, drawers, desks and shelves.

b. Air-conditioning should be installed during construction.

c. Drinking fountains.

8. Justification for the New Facility. Force Troops at the present time is scattered throughout the Camp Lejeune activity, and in most cases is superimposed on facilities assigned other commands, adding to already unacceptable billeting conditions, and creating insurmountable morale and command problems.

9. Effects if the New Facility is Not Provided. If the new barracks are not provided, the enlisted men assigned to this activity will continue to be billeted in the existing overcrowded and unsanitary barracks.

10. Justification for the Size and Scope of the New Facility. In order to standardize the barracks in the new Force Troops Complex the 2d increment of barracks must be of the same design and similar construction as the first increment.

11. Justification for the Type of Construction Planned. Construction plans for the first increment show reinforced concrete frame, slab on-grade 1st floor, pre-cast concrete on 2d floor and roof, brick veneer with concrete masonry unit backup and pre-cast concrete trim.

12. Alternate Solutions. None

13. Plans for Facilities Being Replaced. On completion of the new Force Troops Complex the barracks being utilized by Force Troops, with the exception of the substandard ones will be returned to Marine Corps Base to alleviate their overcrowded conditions.

* BFRL as adjusted: see 11000-3

25. REQUIREMENT FOR LINE ITEM

The Marine Corps Base, Camp Lejeune, was built to accommodate the Marine Corps Base Organization and one Marine Division, and existing facilities are sufficient only for that purpose. Force Troops elements formerly occupied temporary facilities at Camp Geiger. The facilities were beyond their economy; the Force Troops units were moved to Hadnot Point and superimposed on the 2nd Marine Division and Marine Corps Base facilities. The old facilities were demolished. This situation has resulted in overloaded troop housing and dining facilities, and dispersion of Force Troops elements throughout the Hadnot Point area. A complete, new Force Troops Complex is planned which will accommodate all Force Troops functions except for 2nd Amtrac, which are located at Mile Hammock Bay. This line item, along with the dining facility completed and in operation, will provide adequate dining facilities for the whole Force Troops Complex. If this line item is not provided, there will be no dining facilities for the troops to be billeted in the 2nd Increment of barracks. This building will not cause additional air or water pollution. Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 30 DEC 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-062	MESSHALL (FRENCH CREEK)

1. Function to be Performed. The function to be performed is to provide adequate dining facilities to personnel billeted in the new Force Troops Complex.

2. Necessity for Performing This Function. It is Marine Corps policy that enlisted men at a Marine Corps activity be subsisted in adequate dining facilities.

3. List of existing facilities similar to the requested facility.

a. The first increment of Messhalls, Line Item P-034, is included in FY-66 program and provides dining facilities for 1500 men.

4. Current and Planned Future Workload With Regard to This Function. The requirement for dining facilities are supported by the fact that there are planned barracks for 5,332 men in the new complex and there must be dining facilities for an equal number of men. Dining facilities requirements data is as follows:

Total Force Troops	8211
Less 2d FSR	2572
Less 2d Amtrac Bn	876
Force Troops Complex (Planned Strength)	4766
Barracks Planned (1st & 2nd Incr)	3120
Less Dining Facility (1st Incr)	1500
2d Increment Requirement	1620

5. Description of Construction Being Requested. The requested facility should be constructed on reinforced concrete foundation, masonry walls, concrete floors with quarry tile surface in kitchen, service and work areas, ceramic tile locker and toilet areas; plaster inside walls; built-up roof over insulation. This building should have galley facilities and layout similar to a nominal 1500 man subsistence building. Estimated duration of need is indefinite.

8. Justification for the New Facility.

a. In order to permit maximum effectiveness it is necessary to consolidate all units of Force Troops in one area equipped with suitable facilities.

b. Provision of dining facilities is required in the development of the consolidated areas.

c. The new Complex will contain facilities to support all Force Troops units with the exception of 2d FSR and 2d AmTrac Bn.

d. Messhalls now being utilized by Force Troops Units, are widely scattered throughout the Camp Lejeune Complex and in many cases are buildings assigned to other commands.

9. Effects if the New Facility is Not Provided.

a. The purpose for consolidation of Force Troops would be defeated.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 30 DEC 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-062	MESSHALL (FRENCH CREEK)

(continued)

b. Due to the distance from the location of the new Complex to existing facilities, it would require an enormous transportation effort, resulting in unnecessary expense, and considerable lost man hours.

10. Justification for the Size and Scope of the New Facility.

a. The new Complex will contain facilities to support all Force Troops units with the exception of 2d FSR and 2d AmTrac Bn. The 1st and 2nd increment of barracks will billet 3,120 men.

b. Summation of the "workload" personnel data to justify the size and scope of this building is:

Total Force Troops	8211
Less 2d FSR	2572
Less 2d AmTrac Bn	876
	4766
Barracks Planned (1st & 2d Incr.)	3120
Less Dining Facility (1st Incr.)	1500
2d Increment Requirement	1620

11. Justification for the Type of Construction Planned. This Line Item P-062 should be constructed using the same design and materials as that used in the construction of Line Item P-034 in order to make it compatible with adjacent buildings.

12. Alternate Solutions. None

13. Plans for Facilities Being Replaced. The Messhalls, Buildings #307 and #314 now being utilized by Force Troops, will be returned to Marine Corps Base upon completion of the new Complex.

14. Status of Preliminary Engineering. Preliminary Engineering Report has not been started.

25. REQUIREMENT FOR LINE ITEM

The Marine Corps Base, Camp LeJeune, was built to accommodate one Marine Division, and existing facilities are sufficient only for that purpose. Force Troops elements formerly occupied temporary facilities at Camp Geiger. These facilities were beyond their economic life and in the interest of economy, Force Troops units were moved to Hadnot Point and superimposed on the Second Marine Division facilities, and the old facilities at Camp Geiger were demolished. This situation has resulted in overloaded troop housing, messing and support facilities and dispersion of Force Troops elements throughout the Division area. Subsequently a new Force Troops Complex has been planned and partially completed in the French Creek Area, which will accommodate over 5,669 Troops (Planning Strength). 907 men of the 2D Amphibian Tractor Bn will be located at Mile Hammock Bay. This consolidation of all the elements of Force Troops will relieve the congestion in the Division area. One of the most important considerations for the construction of a Dental Facility within the Force Troops Complex is the fact that nearly all Force Troops personnel will be concentrated in one area. It would be extremely impractical

(Cont'd)

and result in too much loss of man-hours and transportation cost to have the Dental Clinic remain in the same overcrowded "make-do" facilities in the Division area. A new Dental Clinic constructed would eliminate those serious discrepancies of the presently occupied spaces, and the increased efficiency would result in more Force Troops personnel receiving better treatment on a broader scope with less loss of time, energy and funds. Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable. This item will not cause additional air or water pollution.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 30 DEC 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-200	DENTAL CLINIC (FRENCH CREEK)

1. Functional to be Performed. The function is to provide the highest standard of Dental Health for the personnel of Force Troops in the most efficient manner that is possible.

2. Necessity for Performing This Function. In order for this Dental Facility to provide Dental treatment for the personnel of Force Troops, a Dental Clinic with adequate space to effectively perform all phases of Dentistry will be needed.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function: At the present time 4th Dental Company is utilizing space assigned us by the Base Dispensary, Bldg. 15, Marine Corps Base. It is considered inadequate to accomplish our mission. The Base Dental Department, located in the Hadnot Point area is a like facility but due to the number of Force Troops personnel involved who are dependent upon 4th Dental Company for Dental support, utilization of their facility would be impossible. All Dental equipment currently used by the 4th Dental Company is garrison type "on loan" to us by the Base Dental Department. Utilization of this equipment in a new facility is not probable. A permanent type facility of 29 dental operating rooms within an area of 14,220 square feet is required.

4. Current and Planned Future Workload With Regard to This Function.

a. Emergency and routine Dental support to all units of Force Troops (including 2d FSR) is rendered to a T/O strength of 10,059 personnel (USMC & USN).

b. The workload accomplished for Force Troops personnel during CY 1966 was 90,252 dental procedures for a total of 35, 156 patient sittings.

c. All phases or types of Dental treatment would be accomplished in the new clinic, including prosthodontics, anti-caries treatments and preventive periodontics.

d. The clinic would be utilized nearly full time. The 4th Dental Company is seldom deployed.

5. Description of Construction Being Requested. A permanent type structure constructed of brick similar to the surrounding buildings within the Force Troops Complex, to enclose a 29 chair Dental Facility within a gross area of 14,220 square feet is required. The details are not yet firm and will require engineering work. Following is a list of requirements as foreseen by non-engineering type personnel:

a. Central air conditioning and heating.
b. 110 and 220 Volt electricity.
c. Compressed air system throughout the operatories and prosthetic laboratory facilities.
d. Natural gas system throughout the operatories and prosthetic laboratory facilities.
e. Water and steam fittings for Central Sterilization Room and generalized plumbing requirements.

P-200		DENTAL CLINIC		(FRENCH CREEK)

8. Justification for the New Facility. The size of a Dental Clinic has been determined by the Department of Defense by assignment of a specific number of operating rooms for the military strength served, (DODINST 6015.7). Using this criteria, 29 dental operating rooms are required within an area of 14,220 square feet by approved Navy design to support Force Troops. The present dental facilities are located in a wing of the Base Medical Dispensary originally designed as a medical patient ward with an area of 4500 square feet. The facility is not properly designed for a Dental Clinic and is seriously inadequate for spaces. There are only 8 operating rooms, making it necessary to keep at least two Dental officers and two Dental technicians in other spaces on the base, with loss of efficiency. All of our Dental officers are restricted to one operatory which is not efficient and productive. The average number of patients examined and treated by the 4th Dental Company during CY 1966 was 142 patients each working day. There are no waiting rooms. Patients are forced to stand and wait in the passage-ways making it difficult for both the Dental personnel and patients to proceed to their assigned spaces.

One of the most significant developments in recent years in the Naval Dental Corps is the Preventive Dentistry Program, which is helping to combat the enormous work load that resulted from lowering the Dental standards of recruits. This program has proven to be effective in the reduction of new Dental disease and to retard decay process already present. The goal is to treat each individual one time annually within Force Troops. Although every effort is being made to implement this program, we are lagging behind most activities because of lack of space to provide the proper facilities for a modern Preventive Dentistry Program. The preventive program will soon encompass prevention of periodontal disease (Dental disease of the gums and bones) and additional treatment, lecture and demonstration rooms will be needed.

Present spaces do not allow development of a central sterilization area to supply all operatories. This is a more efficient and effective operation than our present system of separate sterilization for each treatment room.

The Company Office is located in the basement of Bldg. 15. This has the disadvantage of being hot in the summer and cold and damp in the winter. It floods during heavy rains making it uncomfortable for personnel and difficult to preserve office and personnel records. The separation from the remainder of the Dental spaces is inconvenient, inefficient and a definite loss of communication exists.

The operating rooms of the present spaces have an open space with beams, plumbing and electrical lines exposed. This results not only in an unsightly overhead but is difficult to clean, produces poor lighting conditions and a high noise level. All of these discrepancies lessen the efficiency of a Dental Clinic. There is, also, a lack of privacy because the partitions do not extend to the ceiling.

The Dental officers' professional and the enlisted personnels' inservice training programs are carried on under extremely poor conditions because there is no space for lecture rooms, visual aids equipment or library.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 30 DEC 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-200	DENTAL CLINIC (FRENCH CREEK)

One of the most important considerations for the new construction of a Dental Facility within the Force Troops Complex is the fact that nearly all Force Troops personnel will be concentrated in one area. Therefore it would be extremely impractical and result in too much loss of man-hours and transportation costs to have the Dental Clinic anywhere else but in the same area.

A new Dental Clinic constructed according to approved Navy designs would eliminate these serious discrepancies of the presently occupied spaces. The increased efficiency would result in more Force Troops personnel receiving better treatment on a broader scope with less loss of time, energy, and funds. The Preventive Dentistry Program could truly be effected. It is therefore recommended that a new Dental Clinic within the Force Troops Complex be programmed. We would hope to occupy at the time the remainder of Force Troops personnel are moved into the complex.

It can be ascertained that if the new facility is programmed and approved, an increase in our T/O will be submitted to adequately man this facility, thus providing more efficient and effective dentistry to Force Troops. An increase in authorized Dental personnel within the Marine Dental companies has been needed for some time.

9. Effects if the New Facility is Not Provided.

a. Tremendous expense and loss of man-hours for transportation for the Force Troops Complex to the present Dental Clinic for Dental support would be involved if the new clinic is not provided.

b. The present amount of dental support would continue to be rendered rather than the possible increase of quality and quantity that the new facility would provide.

c. Present inadequate spaces have no room for further expansion, if this is used as an alternate solution.

d. Our lagging efforts to implement an effective Dentistry Program would continue.

e. Force Troops medical and Dental facilities would be separated. Close proximity and cooperation is necessary in the proper treatment, physical examining and training of Force Troops personnel.

f. Loss of central sterilization of all Dental instruments, which is the more modern and most effective sterilization method to date, would be difficult.

g. The inconvenience and time loss in trying to maintain a close liaison between the Company Office and the main Administrative Spaces will still exist.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 30 DEC 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA
5. LINE ITEM NUMBER: P-200		6. LINE ITEM TITLE: DENTAL CLINIC		(FRENCH CREEK)

h. The problems of privacy in the Dental officer/patient relationship will continue. Our never-ending struggle to keep the Dental Clinic clean, which due to the exposed overhead requires added effort will still be present. The lighting conditions which by Navy standards is far below the minimum requirements will still exist.

i. The lack of lecture, library and conference room will continually require us to reserve and conduct our professional officer and enlisted service training programs in different areas.

10. Justification for the Size and Scope of the New Facility. The Department of Defense, in DOD INSTRUCTION 6015.7, has laid down the following criteria for determining the total number of Dental operating rooms to be required in Dental projects included in the annual Military Construction Progress:

STRENGTH SERVED	NUMBER OF DOR'S
8,000	20
10,000	24

Present Force Troops T/O is 10,000 plus so a 24 chair Dental Clinic is justified. This facility would allow double operatories for the specialties of Dentistry to be more productive, preventive treatment and lecture rooms and adequate administrative spaces. The collateral equipment listed in items 6 and 7 are obviously needed to furnish and make the facility operable.

11. Justification for the Type of Construction Planned. This building should be constructed using materials and design compatible with the surrounding buildings within the Force Troops Complex.

12. Alternate Solutions. There is no alternate solution to the new facility requested.

13. Plans for Facilities Being Replaced. The present spaces will be returned to the Base Medical Department for their use, as they were originally designed.

14. Status of Preliminary Engineering. No preliminary engineering report has been started.

15. Sketch Showing Planned Location of the New Facility. Enclosure (1).

16. Other Graphic Presentations, Including Photographs. None

17. Potential Flood Hazards. Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable.

18. Pollution Prevention, Abatement and Control. This item will not cause additional air and water pollution.

30	BASE MAINTENANCE	91	FORCE TROOLS
		92	MARINE CORPS AIR FACILITY/NEW RIVER

2. Ref. Col. 13 - xx/ is the number of an explanatory note following the itemized listing of facilities.

Supersedes OPNAV FORM 11000- for Marine Corps Use.

ACTIVITY AND LOCATION	ACTIVITY CODE	NAVAL DISTRICT OR AREA	FROM STATUS IF OTHER THAN INITIAL ISSUE	DATE PREPARED
Marine Corps Base, Camp Lejeune, North Carolina	8270-175	5 ND	[x] REVISED CHANGE NO.	1 OCTOBER 1968

CATEGORY CODE	BUILDING NUMBER	PROPERTY RECORD CARD	CURRENT USE	DESIGNED USE	USING ACTIVITY	TYPE CONSTR.	CONDITION CODE	UNIT OF MEAS.	QUANTITY OF ASSETS			REMARKS
									TOTAL	VACANT	SUB-STANDARD	
1	2	3	4	5	6	7	8	9	10	11	12	13

1. Requires rewiring and lighting to bring up to acceptable standards.
2. Substandard on basis of lack of air conditioning.
3. Requires rewiring, lighting, and ventilation to bring up to acceptable standards.
4. Beyond economical repair.
5. Acoustics materials needed to make building suitable for use.
6. Building lacks sufficient space to carry on designated purpose.
7. Requires heating to bring up to acceptable standards.
8. Facility is not suitable for its present use becuase of its general poor condition.
9. Facility lacks adequate ventilation.
10. Inadequate existing air conditioning requiring increase in capacity or installation of central system.
11. Inadequate due to very poor plumbing and electrical systems.
12. Facility is substandard due to the need for repair of either the floor, the roof, or the walls.
13. Facility is substandard due to the need for repair of either the floor, the roof, or the walls along with need for rewiring.
14. Building is inadequate becuase the layout of the building, as well as the existing facilities, are not suitable for the present use of the building.
15. Building lacks adequate plumbing facilities.
16. Building lacks adequate head and plumbing facilities.
17. All these helicopter landing pads are unpaved except for a concrete cross to mark the site imbedded in the ground. The cross has an area of 69 SY. The remaining area is turf.

Supersedes OPNAV FORM 11000- for Marine Corps Use. *Reference: Current edition of MCO 11010.12*

25. REQUIREMENT FOR LINE ITEM

The existing telephone exchange facility in building 755 will have to be relocated in order to build the 2nd Increment of the ITR Complex. This line item will provide the necessary space for the installation of new Centrex Telephone equipment. Construction of this facility must be completed before Line Item P-095 can be started. The existing telephone system is overloaded to the extent that official telephone service to most areas is often seriously delayed. Centrex Telephone service is to be provided throughout Camp LeJeune.

30 DEC 1968	1972		NAVY	Marine Corps Base, Camp Lejeune, North Carolina

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-929	CENTREX SYSTEM FOR TELEPHONES (CAMP GEIGER)

1. Function to be Performed. The function to be performed is to provide modern, fast and efficient CENTREX Telephone Service to Camp Lejeune and the Marine Corps Air Facility, New River, North Carolina.

2. Necessity for Performing this Function. In order for this installation to provide modern CENTREX Telephone Service, it must have tele-communication facilities which are capable of meeting the service requirements and demands of the more sophisticated systems such as the Defense Communications System, World-wide AUTOVON and Commercial Direct Distance Dialing.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be used for Performing This Function. The present telephone switching system consists of two main and six satellite permanently installed automatic dial exchanges. These exchanges have a total Central Office switching capacity of 5,000 line terminals, of which 1400 are capable of two-party service. Seven of the exchanges are Government owned and one is leased from the Carolina Telephone and Telegraph Company. Operation of two of these exchanges will be discontinued upon transfer of quarters telephone service to the Commercial telephone company. Exchange equipment for 1600 main lines will become available for rehabilitation and use in the request facility. The requested facility will replace the 800 line leased exchange at the New River Air Facility and one Government owned 200 line facility at the U. S. Naval Hospital. The Outside Plant facility is composed of 187 miles of cable and 105 miles of open wire lines. All of the Outside Plant is of permanent construction.

4. Current and Planned Future Workload With Regard to This Function. The Telephone System is operated on a twenty-four hour basis to provide telephone service to 2,804 official and 2,292 unofficial subscribers by means of 5,096 main stations and 3,476 extension stations. The past and current workload is based on the average number of subscribers serviced by the Telephone System during the period from April 1966 to March 1967. During this same period 35,812,345 attempted calls were recorded by the automatic switching equipment and an average of 14,250 calls per day were handled manually by the switchboard operators. In January 1968, the 1,990 unofficial station telephones located in quarters and family housing areas are scheduled for transfer to the local commercial telephone company. At that time, the number of calls handled by the system will be reduced considerably. The reduction will be partially offset by the increased service requirements generated by completion of the first increment of the Force Troops Complex at Camp Lejeune in Fiscal Year 1968 and from new service that will be installed upon completion of the requested facility. Service requirements will be further increased with completion of the second increment of the Force Troops Complex in Fiscal Year 1970.

5. Description of Construction Being Requested. The estimated duration of need for these requested facilities is indefinite. Due to the nature and location of the work requested, this item is described as it pertains to three separate geographical areas. This Line item, however, is for a new facility in the Camp Geiger Area only.

In the Hadnot Point area, provide new air conditioned building to house existing and planned equipment, switchboard operators and sufficient administrative space for administering the telephone system. Rehabilitate and transfer existing equipment into the new building and provide sufficient new equipment for 1600 additional lines. This will provide this area with a capacity of 3400 main lines. Building and equipment to be arranged and constructed so that additional Central Office equipment can be installed

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
30 DEC 1968	1972		NAVY	Marine Corps Base, Camp Lejeune, North Carolina

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-929	CENTREX SYSTEM FOR TELEPHONES (CAMP GEIGER)

at some future date as required without building and equipment rearrangement. Reterminate the Outside Cable Plant into the new building. Provide a new 300 pair distribution cable to the U. S. Naval Hospital area and 900 additional distribution pairs to the Hadnot Point Exchange area.

In the Courthouse Bay area, rehabilitate the existing exchange equipment and provide sufficient equipment for 200 additional exchange lines. This will give this exchange a total capacity of 400 main lines. The present building has adequate floor space for the installation of this additional equipment. Provide and install sufficient distribution cable to provide 200 additional cable pairs in the Courthouse Bay Exchange area.

In the Camp Geiger and New River Air Facility area, provide new air conditioned building to house existing and planned equipment. Rehabilitate and transfer existing equipment located in the present Camp Geiger and Montford Point exchanges into the new building. Provide and install sufficient new equipment for 600 additional exchange lines. This will provide this combined area with a capacity of 1200 main lines. Reterminate the existing Outside Cable Plant in the new building. Provide 600 distribution cable pairs from the new building location to the New River Facility area, 200 distribution pairs to the Montford Point area and 200 additional distribution pairs to the immediate Camp Geiger area.

The new system to be designed to provide complete modern CENTREX Service. In order to accomplish this, the existing equipment will require extensive modifications. The present five-digit dialing system must be changed to four-digit numbers. All telephones within the Camp Lejeune System must be able to place and receive calls from other Camp Lejeune telephones by dialing the four-digit number.

Provide direct inward dialing so that calls from any location equipped for direct distance dialing outside Camp Lejeune, including AUTOVON calls, can be dialed directly to Main Camp Lejeune CENTREX Stations. A seven-digit number will be assigned to each main telephone. Callers outside of Camp Lejeune must dial these numbers to reach main telephone stations.

Provide direct outward dialing so that local, long distance and AUTOVON calls can be dialed directly from designated unrestricted telephones without operator assistance. Calls to other Camp Lejeune telephones will be completed by dialing four-digits. All dialed long distance calls will be automatically recorded on punched tape. This service will be provided with new automatic identification equipment (ANI) to be installed in the main exchange at Hadnot Point.

Replace the present ten-position switchboard with a four-position new modern universal switchboard. The switchboard will be equipped with push buttom (Touch Call) dialing, automatic disconnect, automatic ringing and with cord operation for magneto line connections.

Existing equipment to be modified and new equipment designed so that all incoming calls, local, long distance and AUTOVON can be transferred from one main CENTREX Station to another main CENTREX with the aid of the switchboard attendants. New equipment to be designed so that individual station can be non-restricted, partially restricted or fully restricted.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
30 DEC 1968	1972		Navy	Marine Corps Base, Camp Lejeune, North Carolina

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-929	CENTREX SYSTEM FOR TELEPHONES (CAMP GEIGER)

Incoming calls to disconnected and unassigned CENTREX numbers to be answered by recording equipment. The caller will be told that the number is not in service and will be given a number to dial for assistance in obtaining the desired party.

Rearrange the existing Cable Plant to provide sufficient trunking pairs between the three exchanges and the local commercial Telephone Company.

6. List of Collateral Equipment to Be Included in the Line Item. Duration of need for the new facility is indefinite. A detailed list of technical equipment to be included as collateral equipment cannot be provided until such time as the system engineering has been completed.

7. List of Collateral Equipment Associated With, but Not Included in, Line Item. Office equipment for this facility is not included in this Line Item.

8. Justificatin for the New Facility. It is extremely important that the present overloaded telephone system be improved and expanded as proposed in order to modernize and bring to acceptable standards of service both the internal and off-Base communications.

The existing telephone system at the Marine Corps Base, Camp Lejeune is quite complex and consists of a main exchange and six large satellite exchanges. The system is set up on a five-digit numbering system. The system as it presently exists cannot be used for CENTREX, direct in and out dialing without extensive modification. The five-digit numbering system is not compatible with and cannot be used for CENTREX which is limited to four digit numbers for dialing within the system. In order to reduce the system to four-digit numbers, extensive alterations to the existing Cable Plant and both on-Base and on-off-Base trunking would be required. Much of the existing exchange equipment is not suitable for CENTREX useage without extensive modification and additional new equipment would be required.

Due to the constant demand for increased telephone service, the Base Telephone System has become seriously overloaded. This load placed on the existing operators, switching equipment and trunking facilities greatly exceeds normal telephone system practices and results in inadequate service to both official and unofficial subscribers. Requests for new service, both official and unofficial, in the Hadnot Point and Courthouse Bay Exchange areas are being denied, many requests for new service have been filled by the installation of additional extensions on already overloaded main stations. In recent months, official and unofficial telephone users have generated a much greater demand for both personal and official, local and long distance traffic than the present on and off-Base trunking system is able to service. The time delays which are currently experienced in receiving incoming and in accomplishing outgoing off-Base telephone calls interfere significantly with the operation of the Base's official business. The Base Telephone System at peak traffic hours is presently handling an average of 296 calls per hour by each inward operator. The Telephone Industry standards are 125 calls per hour for each operator.

The main exchange at Hadnot Point is located on the second floor of the Base Headquarters building, this is a most undesirable

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
30 DEC 1968	1972		Navy	Marine Corps Base, Camp Lejeune, North Carolina

5. LINE ITEM NUMBER	6. LINE ITEM TITLE	
P-929	CENTREX SYSTEM FOR TELEPHONES	(CAMP GEIGER)

location for such a facility. The space alloted to the telephone exchange is crowded and floor space for expansion is limited. There is insufficient room for the planned additional equipment, a new building is therefore mandatory to provide the necessary space for the proposed facility.

The present Camp Geiger exchange building has sufficient floor space for the proposed expansion, however, future planning for the Military Construction Program calls for major new construction in this area. The present exchange building must be relocated to clear this location for planned barracks construction.

Under this proposed project only the official telephones will be served by the system. The unofficial telephones in the quarters and family housing areas would be transferred to the local commercial telephone company.

9. Effects if the New Facility is Not Provided. Failure to provide the requested facility will result in a progressive worsening of the existing unsatisfactory service provided by the Base Telephone System. The present demand for services and equipment continues to exceed the capability and capacity of the existing facilities. As the Base population and plant is expanded additional requirements will be placed on the system. These additional requirements will hopelessly overload the already loaded telephone system and a chaotic condition will develop. As the grade of telephone service rendered becomes less adequate to meet the day to day requirements, a point will be reached when the operational and training functions of Camp Lejeune and the Marine Corps Air Facility will be seriously hampered.

10. Justification for the New Facility. The detailed arrangements of the size and scope of the proposed facility have not been developed, this will require extensive engineering analysis. At this time, such an analysis has not been made because funds for its accomplishment are not available. A detailed description of the improvements to the system including size and scope cannot be secured until the study has been completed. The information on size and scope provided is based on limited studies conducted by the Telephone Division of the Base Maintenance Department. The estimates cost has been based on a rough estimate by telephone engineers. It is believed that estimates as to costs and size and scope of the proposed facilities are reasonably adequate for programming purposes until such time as a more detailed study has been made.

11. Justification for the Type of Construction Planned. The type of construction planned will conform to that of the other buildings in the area and for an indefinite duration.

12. Alternate Solutions. None.

13. Plans for Facilities Being Replaced. Construction of a new exchange building in the Hadnot Point area will free approximately 3,000 square feet of floor space in Building #1, that can be used for much needed administrative office space. Relocation of the Camp Geiger Exchange will clear this location for new barracks construction that is planned for this area.

30 DEC 1968	1972		Navy	Marine Corps Base, Camp Lejeune, North Carolina

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-929	CENTREX SYSTEM FOR TELEPHONES (CAMP GEIGER)

14. Status of Preliminary Engineering. The development of the technical aspects of this proposed project will require extensive engineering analysis. Such an analysis has not been made because funds for its accomplishment are not available. No detailed description of the proposed improvements to the system can be secured until the study has been completed.

15. Sketch Showing Planned Location of the New Facility. None.

16. Other Graphic Presentations, Including Photographs. Enclosure (1).

17. Potential Flood Hazards. Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable.

18. Pollution Prevention, Abatement and Control. This item will not cause additional air and water pollution.

1	2	3	4	5	6	7	8	9	10	11	12	13

1. Requires rewiring and lighting to bring up to acceptable standards.
2. Substandard on basis of lack of air conditioning.
3. Requires rewiring, lighting, and ventilation to bring up to acceptable standards.
4. Beyond economical repair.
5. Acoustics materials needed to make building suitable for use.
6. Building lacks sufficient space to carry on designated purpose.
7. Requires heating to bring up to acceptable standards.
8. Facility is not suitable for its present use because of its general poor condition.
9. Facility lacks adequate ventilation.
10. Inadequate existing air conditioning requiring increase in capacity or installation of central system.
11. Inadequate due to very poor plumbing and electrical systems.
12. Facility is substandard due to the need for repair of either the floor, the roof, or the walls.
13. Facility is substandard due to the need for repair of either the floor, the roof, or the walls along with need for rewiring.
14. Building is inadequate becuase the layout of the building, as well as the existing facilities, are not suitable for the present use of the building.
15. Building lacks adequate plumbing facilities.
16. Building lacks adequate head and plumbing facilities.
17. All these helicopter landing pads are unpaved except for a concrete cross to mark the site imbedded in the ground. The cross has an area of 69 SY. The remaining area is turf.

30	BASE MAINTENANCE	91	FORCE TROOPS
		92	MARINE CORPS AIR FACILITY/NEW RIVER

2. Ref. Col. 13 - xx/ is the number of an expanatory note following the itemized listing of facilities.

Marine Corps Base, Camp Lejuene, North Carolina | 8270-175 | 5 ND | REVISED CHANGE NO. | 1 OCTOBER 1968

CATEGORY CODE	BUILDING NUMBER	PROPERTY RECORD CARD	CURRENT USE	DESIGNED USE	USING ACTIVITY	TYPE CONSTR.	CONDITION CODE	UNIT OF MEAS.	QUANTITY OF ASSETS			REMARKS
									TOTAL	VACANT	SUB-STANDARD	
1	2	3	4	5	6	7	8	9	10	11	12	13

1. Requires rewiring and lighting to bring up to acceptable standards.
2. Substandard on basis of lack of air conditioning.
3. Requires rewiring, lighting, and ventilation to bring up to acceptable standards.
4. Beyond economical repair.
5. Acoustics materials needed to make building suitable for use.
6. Building lacks sufficient space to carry on designated purpose.
7. Requires heating to bring up to acceptable standards.
8. Facility is not suitable for its present use because of its general poor condition.
9. Facility lacks adequate ventilation.
10. Inadequate existing air condtioning requires increase in capacity or installation of central system.
11. Inadequate due to very poor plumbing and electrical systems.
12. Facility is substandard due to the need for repair of either the floor, the roof, or the walls.
13. Facility is substandard due to the need for repair of either the floor, the roof, or the walls along with need for rewiring.
14. Building is inadequate because the layout of the building, as well as the existing facilities, are not suitable for the present use of the building.
15. Building lacks adequate plumbing facilities.
16. Building lacks adequate head and plumbing facilities.
17. All these helicopter landing pads are unpaved except for a concrete cross to mark the site imbedded in the ground. The cross has an area of 69 SY. The remaining area is turf.

Supersedes OPNAV FORM 11000- for Marine Corps Use. *Reference: Current edition of MCO 11010.12*

2. Ref. Col. 13 - xx/ is the number of an explanatory note following the itemized listing of facilities.

ACTIVITY AND LOCATION: Marine Corps Base, Camp Lejuene, North Carolina

ACTIVITY CODE: 8270-175

NAVAL DISTRICT OR AREA: 5 ND

INITIAL ISSUE ☒ REVISED CHANGE NO.

1 OCTOBER 1968

CATEGORY CODE	BUILDING NUMBER	PROPERTY RECORD CARD	CURRENT USE	DESIGNED USE	USING ACTIVITY	TYPE CONSTR.	CONDITION CODE	UNIT OF MEAS.	QUANTITY OF ASSETS			REMARKS
									TOTAL	VACANT	SUB-STANDARD	
1	2	3	4	5	6	7	8	9	10	11	12	13

1. Requires rewiring and lighting to bring up to acceptable standards.
2. Substandard on basis of lack of air conditioning.
3. Requires rewiring, lighting, and ventilation to bring up to acceptable standards.
4. Beyond economical repair.
5. Acoustics materials needed to make building suitable for use.
6. Building lacks sufficient space to carry on designated purpose.
7. Requires heating to bring up to acceptable standards.
8. Facility is not suitable for its present use because of its general poor condition.
9. Facility lacks adequate ventilation.
10. Inadequate existing air conditioning requiring increase in capacity or installation of central system.
11. Inadequate due to very poor plumbing and electrical systems.
12. Facility is substandard due to the need for repair of either the floor, the roof, or the walls.
13. Facility is substandard due to the need for repair of either the floor, the roof, or the walls, along with need for rewiring.
14. Building is inadequate because the layout of the building, as well as the existing facilities, are not suitable for the present use of the building.
15. Building lacks adequate plumbing facilities.
16. Building lacks adequate head and plumbing facilities.
17. All these helicopter landing pads are unpaved except for a concrete cross to mark the site imbedded in the ground. The cross has an area of 69 SY. The remaining area is turf.

Supersedes OPNAV FORM 11000- for Marine Corps Use. Reference: Current edition of MCO 11010.12

18. Mechanical ventilation, rewiring, lighting, and heat are needed to make the building adequate.

19. Inadequate dut to the conversion of the present system to a Centrex system.

25. All barracks and BOQ's on Camp Lejeune are substandard when using the latest criteria.

33. Existing berthing wharf was constructed in 1955 and is in usable condition. It cannot be used for its intended purpose becuase of the shallow, treacherous channel. With dredging for the channel completed, the existing facility will be adequate. (LST's can use the area between the wharves for beaching in lieu of docking.) See MCON Projects P-025 and P-147 (Code 164/165 on OPNAV 11000-4).

									TOTAL	VACANT	SUB-STANDARD	
1	2	3	4	5	6	7	8	9	10	11	12	13

1. Requires rewiring and lighting to bring up to acceptable standards.
2. Substandard on basis of lack of air conditioning.
3. Requires rewiring, lighting, and ventilation to bring up to acceptable standards.
4. Beyond economical repair.
5. Acoustics materials needed to make building suitable for use.
6. Building lacks sufficient space to carry on designated purpose.
7. Requires heating to bring up to acceptable standards.
8. Facility is not suitable for its present use because of its general poor condition.
9. Facility lacks adequate ventilation.
10. Inadequate existing air conditioning requiring increase in capacity or installation of central system.
11. Inadequate due to very poor plumbing and electrical systems.
12. Facility is substandard due to the need for repair of either the floor, the roof, or the walls.
13. Facility is substandard due to the need for repair of either the floor, the roof, or the walls along with need for rewiring.
14. Building is inadequate because the layout of the building, as well as the existing facilities are not suitable for the present use of the building.
15. Building lacks adequate plumbing facilities.
16. Building lacks adequate head and plumbing facilities.

17. All these helicopter landing pads are unpaved except for a concrete cross to mark the site imbedded in the ground. The cross has an area of 69 SY. The remaining area is turf.

18. Mechanical ventilation, rewiring, lighting, and heat are needed to make the building adequate.

19. Inadequate due to the conversion of the present system to a Centrex system.

20. Needs additional treatment filtration and aeration.

21. Facility cannot meet designed capacity due to loose sand in well.

22. Well inadequate due to numerous iron deposits.

23. Inadequate due to excessive chlorides in water.

24. Water is chemically poor.

25. All barracks and BOQ's on Camp Lejeune are substandard when using the latest criteria.

26. Floatwell is in poor condition.

27. Underground building. Floor leaks.

28. Approximately 20 percent of the existing cable should be replaced due to deterioration. The remaining portion has an estimated life of 10 years.

19. DESCRIPTION OF WORK TO BE DONE

Construct two new 80-man air conditioned Bachelor Officer Quarters (41,600 SF) and 30'x60' additions to two existing buildings, #2607 and 2609. These additions provide 8 new officer suites per building. Each of the four buildings will be air conditioned. The two buildings having additions will also have minor alterations consisting of conversion of old gang heads into laundry and concession rooms, and a TV lounge will be provided on the second floor by closing one door.

24. RELATED LINE ITEMS

25. REQUIREMENT FOR LINE ITEM

The provision of completely livable quarters for bachelor officers having adequate space and facilities in conforming to present-day criteria is the policy of the Department of Defense. There is a total of 21 BOQs at this Base, none of which conform completely to the present criteria in all respects. The total existing capacity of these substandard quarters is 462. The rehabilitation of all existing BOQs which can be brought up to present criteria within the dollar limitations imposed is being programmed as well as the construction of new facilities to replace those which cannot be brought up to standard and to satisfy existing deficiencies. This line item calls for the construction of two new 80-man air conditioned bachelor officers quarters in Paradise Point and 30' x 60' additions to two existing BOQs, Nos. 2607 and 2609, to provide eight new suites per building. The two buildings having additions will also have minor alterations consisting of conversion of old gang heads into laundry and concession rooms and a TV lounge will be provided. The total buildings will be air conditioned. After rehabilitation Buildings 2607 and 2609 will each provide quarters for 14 grade 0-3 and above officers and two grade 0-2 and below officers. If this line item is not provided, officer personnel must continue to be housed in substandard quarters in these BOQs. This line item will not contribute to air or water pollution.

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-124	BACHELOR OFFICERS QUARTERS, PARADISE POINT (BASEWIDE MISC)

LINE ITEM FACILITY STUDY - PART I - BOQ, PARADISE POINT

1. Function to be Performed. Provide adequate billeting of bachelor officers in quarters conforming to present criteria.

2. Necessity for Performing This Function. It is Department of Defense policy to provide adequate billeting for bachelor officers in modern and attractive quarters. In line with this, new criteria are continually being developed to improve habitability of BOQ's and considerable emphasis is currently being placed upon improving existing inadequate quarters and/or construction of new modern quarters to replace those which cannot be economically rehabilitated and to satisfy deficiency requirements.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function. There are a total of twenty-one BOQ's at this Base, none of which conform completely to present criteria in all respects. The total capacity of these existing substandard quarters is 462. Four BOQ's, Building Nos. 2602, 2607, 2609, and 2611 have been partially rehabilitated to provide 15 private living room, bedroom and bath spaces, and one private bedroom and bath space, which conform to criteria but these buildings are not air conditioned and do not provide supplemental items such as concession rooms. Building 2605 has also been partially rehabilitated and contains 13 private living room, bedroom and bath spaces, one private bedroom and bath space, and six small rooms with gang baths. It is not air conditioned and lacks the supplemental items. The newest BOQ, 2617, contains satisfactory bedroom and half bath spaces for 26 officers of O-3 grade and above but kitchenettes are not provided as required. Thus, there are a total of 99 living spaces which can be termed reasonable adequate in six buildings which would require further modification to make them conform to criteria in all respects. Modifications are required to the following additional BOQ's in order to bring them up to present habitability criteria: 2604, BB-45, M-130, M-231, RR-9, 2613, TC-1066, TC-1067, TC-1068, TC-1069, TC-1160, TC-1161, and TC-1162. When modifications are complete, a total of 309 living spaces will be available compared with a total of 750 spaces required. The balance will be made up by new construction. Two existing BOQ's, M-232 and M-233 are not suitable for modification.

4. Current and Planned Future Workload With Regard to This Function. A total of 750 spaces are required for bachelor officers in accordance with the directed planning requirements.

5. Description of Construction Being Requested. This line item provides for the construction of two new 80-man air conditioned bachelor officers quarters, and 30' x 60' additions to two existing BOQ's, Nos. 2607 and 2609, to provide eight new suites per building. The two buildings having additions will also have minor alterations consisting of conversion of old gangheads into laundry and concession rooms and a TV lounge will be provided on the second floor by closing one door. The total buildings will be air conditioned. Construction will be brick masonry compatible with the adjacent buildings. Duration of need is indefinite.

8. Justification for the New Facility. The provision of completely livable quarters for bachelor officers having adequate space and facilities and conforming to present-day criteria is policy of the Department of Defense. This project is intended to furnish part of the total deficiency in adequate spaces required for planned officer personnel at this Base. Other line items will provide for improvement of existing accommodations but a deficiency will still remain after such rehabilitation has been completed.

9. Effects if the New Facility is Not Provided. If new BOQ spaces are not provided, officers assigned to this activity must continue to be housed in existing inadequate substandard quarters or be forced to live off Base.

10. Justification for the Size and Scope of the New Facility. The size of the proposed new buildings and additions is based upon existing space requirements called for by present criteria.

11. Justification for the Type of Construction Planned. The construction planned is dictated by the architecture and type of construction of the existing buildings in the area.

12. Alternate Solutions. There are no alternate solutions.

13. Plans for Facilities Being Replaced. No facilities are being replaced.

14. Status of Preliminary Engineering. No preliminary engineering has been accomplished.

15. Sketch Showing Planned Location of the New Facility. None.

16. Other Graphic Presentations, Including Photographs. Enclosure (1).

17. Potential Flood Hazards. Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable.

18. Pollution Prevention, Abatement and Control. This item will not cause additional air or water pollution.

25. REQUIREMENT FOR LINE ITEM

The first increment of a new Force Troops Complex have been completed. This Complex is located in an undeveloped area near French Creek. In the first increment projects, all needed utility services and roads are included in the contract. This line item provides for the extension of the utility services and roads which are required in connection with the 2d increment of the Force Troops Complex. This line item must be approved and funded simultaneously with the 2d increment line item in order to provide complete and usable facilities under those line items. This item will not cause additional air and water pollution. The requirements of Executive Order No. 11296 (Flood Hazards) are not applicable.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
1 OCT 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE	
P-113	UTILITIES AND ROADS, FRENCH CREEK AREA	(BASEWIDE/MISC)

1. Function to be Performed. This line item provides for the extension of the utility services and roads which are required in connection with the 2nd increment of the Force Troops Complex.

2. Necessity for Performing This Function. This line item must be approved and funded simultaneously with the 2nd increment line item in order to provide complete and usable facilities under those line items.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function. The existing facilities in the Force Troops Complex were constructed based on the requirements of Phase one of the projected Force Troops requirements as to Utilities and Roads (P-084). These facilities are listed below. It should be fully understood that these facilities only provide the necessary services needed for the first Phase and do not provide the depth of service necessary for Phase Two of the project.

Utilities now in existence in support of the Force Troops Complex:

TYPE	U/M	QUANTITY
Electrical Distribution Lines	LF	25,000
Steam	LF	34,700
Sewage Pumping Station	LS	
Sanitary Sewer Lines	LF	15,000
Elevated Storage Tank	GA	300,000
Water Distribution Lines	LF	15,000
Storm Drainage	LF	10,000
Roads	SY	25,500
Fire Alarm	LS	

4. Current and Planned Future Workload With Regard to This Function. The 2nd increment to the Force Troops Complex is to house 1,620 enlisted personnel. The facilities will operate at maximum potential throughout the year. The requested facilities are based on this projected requirement.

5. Description of Construction Being Requested. The estimated duration of need for the new facilities is indefinite. The requested facilities are to provide utilities in support of the 2nd increment of Force Troops facilities. Electrical distribution, steam distribution, water distribution, sanitary sewer lines, storm sewer lines, fire alarm system, and communication lines. Roads, 22-foot paved surface with two 8-foot shoulders, back slopes and side ditches; 1-½ inch asphaltic concrete on 4-½ inch compacted stone base. Clearing, earthwork and grassing of areas for utilities and roads are also to be provided.

(Cont'd)

An individual listing of specific paraphernalia is presented below:

FACILITY	U/M	QUANTITY
Electrical Distribution	LS	
Communication Lines	LF	18,500
Steam Distribution	LF	2,810
Sanitary Sewer	LF	5,700
Water Distribution	LF	9,100
Roads	SY	15,000
Storm Sewer	LF	5,900
Drainage Ditch	LF	1,000
*Fire Alarm	LS	
Clearing	AC	50
Excavation	CY	150,000
Grassing	AC	20

*The Existing Fire Alarm Circuit serving the Force Troops Complex has 145 pull boxes (National Fire Codes Manual, Vol 7, 1963-64, recommend a maximum of 60 pull Boxes). Thus causing an overload by a total of 85 pull boxes. To correct this existing overloaded condition and the 2D Increment requirement of 60 pull boxes, it will require construction of new Fire Alarm Circuits to the Force Troops Complex.

6. List of Collateral Equipment to Be Included in the Line Item. None.

7. List of Collateral Equipment Associated With, but Not Included in, Line Item. None.

8. Justification for the New Facility.

A. The first increment of a new Force Troops Complex has been completed. This Complex is located in an undeveloped area near French Creek. In the first increment projects, all needed utility services and roads are included in the contract. This line item provides for the extension of the utility services and roads which are required in connection with the 2d increment of the Force Troops Complex. This line item must be approved and funded simultaneously with the 2d increment line items in order to provide complete and usable facilities under those line items.

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-113	UTILITIES AND ROADS, FRENCH CREEK AREA. (BASEWIDE/MISC)

(Cont'd)

B. The Marine Corps Base includes five administrative, operational and troop housing areas which form a circular pattern on both sides of New River. Distances between areas vary from 5 to 15 miles, with total perimeter distance of 65 miles. The Base was built to accommodate the Marine Corps Base Organizations and one Marine Division and existing facilities are sufficient, in general, only for that purpose.

C. Force Troops elements formerly occupied temporary facilities on the opposite (Geiger) side of New River from the main Base. These facilities passed their useful economic life and economy dictated the removal of Force Troops Units to other areas and the demolition of the old temporary facilities.

D. Force Troops Units are now dispersed through all these areas (except Rifle Range) and are superimposed on facilities assigned to units of other commands. Force Troops Combat Units do not have facilities which are appropriate for the care and maintenance of the specialized equipment assigned. Reserve units on annual field training are assigned to the area appropriate to their training mission. These conditions reault in lowering the effectiveness of command and the ability to maintain combat readiness.

E. In order to permit maximum effectiveness, it is necessary to consolidate all units of Force Troops in one area equipped with suitable facilities. Line item P-113 provides all utilities, roads and streets for the second phase of the Force Troops Complex. The phasing of construction for the Force Troops Complex is as follows:

	Category Code	Description	Quantity	U/M	Item ID No.
PHASE I (FY-66)	171-10	Academic & General Instruction Bldg.	10,400	SF	P-026

9. Effects if the New Facility is Not Provided. The individual sizes of the utility components are sized to accommodate future increments of components. Optimum use is made of the present system network. Without these utilities the new facilities to be constructed in the Force Troops Area will be inoperable.

10. Justification for the Size and Scope of the New Facility. It should be obvious that these new facilities are urgently required. However, to make sure that the need is fully realized a resume of the preceding information is presented here:

(1) There are no existing facilities capable of handling the requirements of the second increment.

(2) If the new facilities are not provided the second increment will not be operable.

11. Justification for the Type of Construction Planned. The Construction and type of equipment is comparable to that used in the first increment. The material used is to be of a type whose capacity of use shall be indefinitely long.

12. Alternate Solutions. There are no alternate solutions.

13. Plans for Facilities Being Replaced. There are no facilities being replaced.

14. Status of Preliminary Engineering. The preliminary engineering report has not been started.

15. Sketch Showing Planned Location of the New Facility. Enclosure (1).

16. Other Graphic Presentations, Including Photographs. None.

17. Potential Flood Hazards. The requirements of Executive Order No. 11296 (Flood Hazards) are not applicable.

18. Pollution Prevention, Abatement and Control. This item will not cause additional air and water pollution.

25. REQUIREMENT FOR LINE ITEM

This line item is required to provide utilities and roads to support a second and third echelon maintenance area being developed for the 2nd Marine Division at Camp Lejeune. No roads or utilities are presently located in the area selected for development. The FY 1970 MCON Program includes a Combat Vehicle Maintenance Facility (P-138), a Weapons Maintenance Facility (P-137), and an Electronics Maintenance Facility (P-133) in this area. Future construction will provide modern and centralized maintenance facilities for the major portion of FMF equipment at Camp Lejeune. This line item will provide: basic site improvement, roads, utility lines, and a sewage lift station. Provision of this line item in FY 1970 is essential to provide required services for planned construction, and to provide a basis for future construction.

Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable. This item will not cause air or water pollution.

24. RELATED LINE ITEMS

25. REQUIREMENT FOR LINE ITEM

This Base's MCON program contains a large number of line items for new barracks and shop buildings; for additional barracks and BOQ's and for rehabilitation of barracks and BOQ's which will require enormous quantities of power for air conditioning. The existing electric distribution lines in the areas involved are totally inadequate to assimilate the increased demand for electric service. This line item proposes to construct a new distribution line between the sub-station at Building 45 and the central area, together with a terminal switching station. This new distribution line will be used to relieve the existing loop feeder for the area lying south of Holcomb Boulevard with the exception of the present industrial feeder. If this line item is not approved, adequate electric service will not be available to support presently programmed construction.

This item will not cause additional air or water pollution. The requirements of Executive Order No. 11296 (Flood Hazards) are not applicable.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 20 JAN 1969	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-204	DISTRIBUTION LINE, ELECTRIC, HADNOT POINT AREA (BASEWIDE MISC)

LINE ITEM FACILITIES STUDY, PART I, DISTRIBUTION LINE, ELECTRIC (HADNOT POINT)

1. Function to be Performed. Construct a new distribution line between the substation at Building No. 45 and the Division Shop Area together with a terminal switching station.

2. Necessity for Performing this Function. The existing electrical distribution lines, in the areas involved, are totally inadequate to assimilate the increased demand for electrical service that new construction will bring about.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function. Electric power is obtained from the CP&L Co. from a 25,000 KVA transformer located adjacent to Building #45. The power is distributed throughout the Marine Base at 12.5 KV and 12.5/7.2 KV via distribution feeders.

Electrical Distribution System. The present electrical distribution system consists of five main feeders. These feeders are as follows:

a. Three of these five feeders, designated as Hadnot Point, Paradise Point, and Loop Tie Feeders, constitute a loop 12.5 miles in length. The Hadnot Point and Paradise Point feeders consist of four #4/0 and three #4/0 primary copper conductors, respectively, and operate at 12.5/7.12 KV and 12.5 KV. This loop has four outlying switching stations and load points. The Loop Feeder Tie consists of four 336400 CM aluminum conductors operating at 12.5/7.2 KV and connects to the Paradise Point and Hadnot Point Loop Feeder at Switching Station #2.

b. The Industrial Feeder consists of three No. 1/0 primary copper conductors operating at 12.5/7/2 KV by utilizing the common neutral of the Hadnot Point circuit.

c. Camp Geiger Feeder, now replaced by a switching station at Geiger, consisted of three No. 1/0 primary and one No. 1/0 neutral copper conductors operating at 12.7.2 KV, which can be used for emergency service, if required.

d. The Midway Park Sub-Feeder is tied to the Loop Tie Feeder and consists of three No. 1/0 primary copper conductors operating at 12.5 KV. The first substation contains three 1,000 KVA transformers connected delta-wye for 12.5 KV - 2400/4160Y volts operation. A second substation approximately one mile further is also served from this feeder. The second substation contains three 333 KVA transformers connected delta-wye for 12.5 KV - 2400/4160Y volts operation.

The entire system, including both main and subfeeders, consists of a total of approximately 117.42 miles of three-phase and 5.1 miles of single-phase pole lines; plus an approximate 80 miles of secondary pole lines extending beyond primary dead ends. There are approximately 5,340 poles and 1,200 distribution transformers on this system.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 20 JAN 1969	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-204	DISTRIBUTION LINE, ELECTRIC, HADNOT POINT AREA (BASEWIDE MISC)

4. Current and Planned Future Workload With Regard to This Function. The existing primary electric distribution line to the Hadnot Point Area are currently reaching a fully loaded condition due to continually increasing demands for electric current. The completion of the new Force Troops Complex alone will use up all spare capacity in the lines serving that area. A large program of construction of new Maintenance Shops, Barracks and BOQ's and the Rahabilitation of Barracks and BOQ's which will result in air conditioning these facilities will result in an increased demand for electric service which cannot be assimilated by the present distribution system.

5. Description of Construction Being Requested. The duration of need is indefinite. A 7,200 volt single-phase grounded neutral overhead primary electric distribution line is to be constructed from Building No. 45 to the Marine Division Shop Area and Force Troops Complex together with a terminal switching station. Voltage regulators will be provided as required for providing adequate service to the area.

6. List of Collateral Equipment to Be Included in the Line Item. None.

7. List of Collateral Equipment Associated With, but Not Included in, Line Item. None.

8. Justification for the New Facility. The programmed development of a new Force Troops Complex, the first increment of which is currently under construction, and of an entirely new Maintenance Shop Area for 2nd Marine Division, which will replace totally inadequate existing shops, will impose an increased electric service requirement which will exceed the capacity of presently existing primary electric distribution lines. The existing loop feeder will be adequate to serve the first increment of the Force Troops Complex and the first increment of the new Shop Area will not be able to handle subsequent construction. There will also be a significently increased electric demand in the Hadnot Point area due to programmed additions to barracks and the rehabilitation of existing barracks, all of which will require air conditioning which will produce enormous increases in electric service demand. It is, therefore, proposed, under this line item, to construct a new distribution line from the main substation at Building No. 45 to the vicinity of the new Shop Area terminating in the new switching station. The new feeder serving the central area at Hadnot Point will be relieved of the load lying south of Holcomb Boulevard and that area will be re-connected to the new feeder. This readjustment will not include the area served by the existing Industrial Area loop feeder. If this line item is not approved, it will be impossible to support presently programmed construction with adequate electric service.

9. Effects if the New Facility is Not Provided. If this line item is not approved, adequate electrical service will not be available to support presently programmed construction.

10. Justification for the Size and Scope of the New Facility. This proposed new line and the readjustment of the existing feeder in the Central Area will be developed to provide for all foreseeable demand in this area. The present stage of programming does not permit finite analysis at this time but this will be possible at the Program Cost Estimate stage of this project.

24. RELATED LINE ITEMS

2D MAR DIV INDUSTRIAL COMPLEX & FORCE TROOPS COMPLEX, 2D INCREMENT

25. REQUIREMENT FOR LINE ITEM

The new Force Troops Complex, the construction of the first portion which has been authorized, along with the new 2nd Mar Div Maintenance Complex and new barracks in Hadnot Point, will add a total of 100,000 pounds of steam per hour. The source of the steam is the Central Heating Plant in the Hadnot Point area. This plant contains four 100,000 pound capacity boilers. During average winter conditions, three boilers can meet the existing steam demand. During periods of extreme cold, it is necessary to fire all boilers because the existing load under these conditions is normally 335,000 pph. The addition of the 100,000 pph will result in a requirement for operating all four existing boilers continually at maximum capacity (400,000 pph) during cold weather plus an additional 35,000 pph. In order to avoid over-taxing this Plant and to preclude a shortage of steam, it is necessary to provide a 100,000 pph boiler along with the area to house it. This item will not cause additional water pollution. The air pollution caused by this item will be abated in accordance with Executive Order No. 11282 by corrective measures included as part of this line item.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-160	ADDITION - CENTRAL HEATING PLANT, HADNOT POINT AREA (BASEWIDE/MISC)

1. Function to be Performed. The function to be performed is the addition of a boiler to the Central Heating Plant in order to avoid over-taxing this Plant and to preclude a shortage of steam when one of the existing boilers requires maintenance.

2. Necessity for Performing This Function. In order for the Central Heating Plant to provide enough heat during the winter months, an additional boiler must be added to the Plant.

3. List of Existing and Authorized Facilities Similar to the New Facility Requested Which Can Be Used for Performing This Function.

HP	TYPE CONSTRUCTION	BLDG.	SF
12,000	P	1700	29,450

4. Current and Planned Future Workload With Regard to This Function.

Total amount of HP needed	15,000	Total amount of SF needed	30,800
Total amount of HP available	12,000	Total amount of SF available	29,450
Total amount of HP deficit	3,000	Total amount of SF deficit	1,350

5. Description of Construction Being Requested. Duration of need of the new facility is indefinite. Construct a 1,350 SF addition to the Central Heating Plant, Building No. 1700, which will be compatible to the existing facility which is a structural steel frame with 12½" brick curtain walls above operating floor level and concrete walls below, floored with concrete slabs or metal grating. Provide a new 100,000 pph coal-fired boiler together with all necessary associated equipment.

6. List of Collateral Equipment to Be Included in the Line Item. 100,000 pph boiler with associated mechanical equipment.

7. List of Collateral Equipment Associated With, but Not Included in, Line Item. None.

8. Justification for the New Facility. The new Force Troops Complex, the construction of the first portion which has been authorized, along with the new 2nd Marine Division Maintenance Complex and new barracks in Hadnot Point, will add a total of 100,000 pounds of steam per hour. The source of the steam is the Central Heating Plant in the Hadnot Point area. This Plant contains four 100,000 pound capacity boilers. During average winter conditions three boilers can meet the existing steam demand. During periods of extreme cold it is necessary to fire all boilers because the existing load under these conditions is normally 335,000 pph. The addition of the 100,000 pph will result in a requirement for operating all four existing boilers continually at maximum capacity

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
1 OCT 1968	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-160	ADDITION - CENTRAL HEATING PLANT, HADNOT POINT AREA (BASEWIDE/MISC)

(Cont'd)

(400,000 pph) during cold weather plus an additional 35,000 pph. In order to avoid over-taxing this Plant and to preclude a shortage of steam, it is necessary to provide a 100,000 pph boiler along with the area to house it.

9. Effects if the New Facility Is Not Provided. There will be a lack of heat to all places which are supplied with heat from the Central Heating Plant. Also, because of the need to supply as much heat as can possibly be supplied by the Plant in its present condition, it will have to be taxed to its fullest capacity at all times.

10. Justification for the Size and Scope of the New Facility. The Central Heating Plant contains four, at 100,000 pph, boilers. Under normal winter conditions the Plant is able to operate with three boilers in service. Under extreme conditions, however, it is necessary to place the fourth boiler in service with the total exported steam being in the order of 335,000 pph. The first increment of the Force Troops Complex will require approximately 25,000 pounds of steam per hour which when added to the normal load will require continual operation of the four boilers. Any outage in any of the boilers during cold weather would result in a deficiency in meeting the normal demand. The 2nd increment of the Force Troops Complex will add an additional 25,000 pounds of steam per hour which will mean that under extreme conditions all four boilers must be fired continually at essentially maximum capacity. Also, the new 2nd Marine Division Maintenance Complex along with new barracks in Hadnot Point will require additional 50,000 pph, 25,000 each. As a companion line item for the new construction, it is therefore necessary to provide a new 100,000 pph boiler and a small addition to the Central Heating Plant. This boiler, just as the others, will be coal-fired and will be easily convertible to oil-fired just as the other boilers. However, a conversion to oil-firing would have to be temporary because all operations involving this would have to be done manually. By installing automatic controls, which would not be a very large operation, it could be converted to oil-fired at will.

11. Justification for the Type of Construction Planned. In connection with the new Force Troops Complex, the first increment of which is currently authorized for construction, along with the new 2nd Marine Division Industrial Complex and new barracks in Hadnot Point, comparative cost studies were made for providing steam to the new buildings by means of connection to the Central Heating Plant in the Hadnot Point Area, versus the cost of an addition to the small heating plant serving the shop buildings in the French Creek area. These studies indicated that it would be ultimately cheaper to provide steam from the Central Heating Plant despite the fact that an additional boiler would be required.

12. Alternate Solutions. None.

13. Plans for Facilities Being Replaced. No facility is going to be replaced.

24. RELATED LINE ITEMS

25. REQUIREMENT FOR LINE ITEM

The construction of a new Industrial Area with various new shops to replace inadequate shops used by the 2nd Marine Division is presently being programmed. The first three line items will provide eight new shop buildings in this new area. Steam service required for these buildings will be obtained from a new steam distribution line which is currently under construction to serve the new Force Troops Complex and which passes nearby. This line, however, has been designed to serve only the Force Troops buildings and will not be adequate to provide steam for all of the new buildings being programmed for the new Shop Area. The Force Troops line will be tapped to provide steam for the first shop building but a new line between the Central Heating Plant and the Shop Area will ultimately be required to serve the new shops. This line item will provide adequate steam service for the new Shop Area and will also be used to form a loop connecting with the Force Troops line thus providing reinforcement for both areas. If this new line is not provided, there will not be adequate steam to supply the ultimate requirements for the new shop buildings.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 20 JAN 1969	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE	
P-198	STEAM AND CONDENSATE LINES, HADNOT POINT	(BASEWIDE/MISC)

1. Function to be Performed. Construct a new steam distribution line to provide adequate steam for the new 2nd Marine Division Shop Area as well as to act as a steam reinforcement for the Force Troops Complex.

2. Necessity for Performing This Function. In order for the new Shop Area of the 2nd Marine Division to be adequately provided with steam, a new line must be run.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function. There are no existing facilities which can be used for performing this function. Reference Paragraph 10, Justification for the Size and Scope of the New Facility.

4. Current and Planned Future Workload With Regard to This Function. It is estimated that when the new 2nd Marine Division Shop Area is completed, the proposed steam line will have to carry a load estimated at 36,900 pounds of steam per hour for normal steam usage.

5. Description of Construction Being Requested. This facility will be permanant with its use being indefinite. The steam line to be constructed will be of underground black steel in conduit. Amount is estimated to be 5,800 LF.

6. List of Collateral Equipment to Be Included in the Line Item. None.

7. List of Collateral Equipment Associated With, but Not Included in, Line Item. None.

8. Justification for the New Facility. The new facility must be provided in order to have adequate steam heat at the new 2nd Marine Division Shop Area.

9. Effects if the New Facility is Not Provided. If this new steam line is not provided, there will be inadequate steam to supply the estimated requirements for the new shop buildings.

10. Justification for the Size and Scope of the New Facility. The construction of a new Industrial Area with various new shops to replace inadequate shops used by the 2nd Marine Division is presently being programmed. The first three line items (P-138, Combat Vehicle Maintenance Facility, 1st Increment; P-137, Weapons Maintenance Facility; and P-133, Electronics Maintenance Facility) are in the FY-69 MCON Program. These shops will be connected to a new steam distribution line which is currently under construction to serve the new Force Troops Complex and which passes relatively close to the new Shop Area. This line, however, will not be sufficiently large to serve the whole of the new Shop Area, because the decision to develop this area had not been made until after the contract or the Force Troops Complex had been let. The Force Troops line will be adequate to serve the FY-69 shops but will not be able to supply

P-198	STEAM AND CONDENSATE LINES, HADNOT POINT (BASEWIDE/MISC)

(Cont'd)

adequate steam for the subsequent shops in addition to the later increments of the Force Troops Complex for which it was designed. It will therefore be necessary to construct a new steam distribution line from the Central Heating Plant to the new Shop Area. This line will ultimately connect to the lines serving the first shops, and will form a loop feeder which will be advantageous to both areas in accordance with good design practice. This line item will provide this new line.

11. Justification for the Type of Construction Planned. Black steel in conduit is the most compatible type of pipeline to the existing pipeline. Also, it is the most economical and efficient of steam piping.

12. Alternate Solutions. None.

13. Plans for Facilities Being Replaced. No facilities are being replaced.

14. Status of Preliminary Engineering. No preliminary engineering report has been made.

15. Sketch Showing Planned Location of the New Facility. None.

24. RELATED LINE ITEMS

25. REQUIREMENT FOR LINE ITEM

The construction of the new Force Troops Complex, the new Division Shop Area, and the air conditioning of the new majority of existing buildings will result in a substantial increase in the potable water requirements imposed upon the Hadnot Point water treatment plant. This plant is already operating at design capacity and at times in excess of its capacity. This plant is located in such a highly developed area that enlargement of the water treatment facilities is not economically possible. It is, therefore, proposed to construct a new water treatment plant, together with a new well field and collection line system, and to connect this plant to the main housing areas, thus relieving the Hadnot Point plant of approximately 1.5 MGD load. This relief will make it possible for the existing plant to meet the demands of the before-mentioned new construction and provide a facility adaptable for future expansion as warranted by future needs. This item will not cause additional air or water pollution.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 1 OCT 1968			NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE	
P-143	WATER TREATMENT PLANT, WELLS AND DISTRIBUTION LINES	(BASEWIDE/MISC)

1. Function to be Performed.

a. Supply potable water to the Paradise Point housing areas, Capehart housing areas, and Midway Park housing area.

b. Relieve the Hadnot Point water system of supplying the above residential areas.

c. Provide emergency reinforcement to the Hadnot Point system.

2. Necessity for Performing This Function. The Hadnot Point Water Treatment Plant is already overloaded. New and planned construction will impose additional demands on the plant, and it is physically impracticable to expand the existing plant.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function. There are none.

4. Current and Planned Future Workload With Regard to This Function. The workload of this facility is directly related to the workload of the Hadnot Point water system because this proposed facility is intended to relieve the workload of the Hadnot Point system. Recent daily peak demands on the Hadnot Point system are shown below:

1961	5,652,000 gallons per day	1967	Jan	5,290,000 gallons per day
1962	6,048,000 gallons per day		Feb	5,184,000 gallons per day
1963	6,588,000 gallons per day		Mar	5,292,000 gallons per day
1964	5,868,000 gallons per day		Apr	5,508,000 gallons per day
1965	5,760,000 gallons per day		May	5,400,000 gallons per day
1966	5,868,000 gallons per day			

The demands on the Hadnot Point Treatment Plant exceeded 5 million gallons per day for extended periods with peak days in excess of 6 million gallons. The planned Force Troops Complex, of which some portions are currently being constructed, is expected to increase the demand by approximately 0.5 million gallons per day. This increase will result from an increase in troop loading, an increase in industrial usage, and an increase in boiler water make-up in steam for the area because the condensate will be wasted. The planned projects to provide a new divisional shop area and to generally provide air conditioning for all existing facilities except warehouses plus other planned construction are expected to increase the demand by another approximately 0.5 million

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 1 OCT 1968			NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE	
P-143	WATER TREATMENT PLANT, WELLS AND DISTRIBUTION LINES	(BASEWIDE/MISC)

(Cont'd)

gallons per day. The demand may also be expected to increase in accordance with the national trend of an increased water usage per capita. The water demand by the areas currently supplied by the Hadnot Point system may reasonably be expected to exceed 6 million gallons per day throughout the foreseeable future. The requested facility would relieve that system of the before-mentioned residential areas, which currently demand approximately 1.5 million gallons per day and would also be the source of water supply for all planned future dependent housing.

5. Description of Construction Being Requested. The estimated duration of need is indefinite. This project proposes the construction of a new two million gallon per day water softening plant complete with pumping station and reservoir; development of a new two million gallon per day well field to supply the new plant; and interconnection of the new plant effluent with existing distribution system. Softening will be accomplished by the lime treatment process. The size and scope of the new facilities are presented below:

FACILITIES	U/M	QUANTITY
Plant	MG	2
Reservoir	MG	1
Water Distribution Lines	LF	25,000
Wells and Pumping Fac.	GM	1,400
Supply Mains	LF	25,000
Access Roads	LF	7,800
Electrical Distribution	LF	

6. List of Collateral Equipment to Be Included in the Line Item. None.

7. List of Collateral Equipment Associated With, but Not Included in, Line Item. 2 chairs, 2 desks, 1 laboratory bench, 6 unit clothes lockers.

8. Justification for the New Facility.

a. The construction of the new Force Troops Complex, the new Division Shop Area, and the air-conditioning of the majority of existing buildings will result in a substantial increase in the potable water requirements imposed upon the Hadnot Point water treatment plant. The demand increase will result from higher troop loadings, more industrial usage, and an increase in water required for the central steam heating plant. Further increases are inevitable with a modern trend of more water usage per capita and the more general use of air-conditioning in the installation of future additional supporting facilities.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 1 OCT 1968			NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE	
P-143	WATER TREATMENT PLANT, WELLS AND DISTRIBUTION LINES	(BASEWIDE/MISC)

(Cont'd)

b. The Hadnot Point Water Treatment Plant serves Hadnot Point proper and the Bases's main residential area, the latter being an area somewhat remote from the water plant and separated from Hadnot Point proper by Wallace Creek.

c. Hadnot Point proper is the most highly developed complex on the Base and is the nucleus of the entire camp. It includes the U.S. Naval Hospital, the Division billeting area, the Central Area, the Supply and Industrial Areas, and the Force Troops Area. A reliable and adequate water supply to this area is of absolute and paramount importance to the mission of the Base. The water demand in this area is very susceptible to great fluctuations as influenced by troop loading conditions and the potential for an increase in troop loading always exists here.

d. The designed treatment capacity for the Hadnot Point Water Plant is 5 MGD (5 million gallons per day). Past production at this plant has exceeded 5 MGD for extended periods with peak days in excess of 6 MGD. Current production approximates 5 MGD. Production which equals or exceeds design capacity requires optimum operating conditions with no provisions for flexibility or equipment malfunction. The complexities of a 5 MG water plant seldom permit such optimum conditions to exist.

e. Past operating experience under overloaded conditions coupled with the knowledge of a certain increase in demand establishes an absolute necessity for increasing the water treatment capacity for the Hadnot Point Area.

f. The existing plant is located in the approximate center of demand for Hadnot Point proper but is situated in a highly-developed area and there is no room for physical expansion except vertically. The foundations for the existing facility are not capable of supporting vertical expansion. Thus, any supplements in capacity must necessarily be provided at a separate location.

g. The logical place to locate the supplemental supply would be in the Base's main residential area. This is, except for Midway Park, which is separated from the other by N.C. Hwy. 24, is bounded on the east by Holcomb Boulevard; on the south by Wallace Creek; on the west by New River; and on the north by Northeast Creek and N.C. Hwy. 24 and includes the family housing developments at Paradise Point, Berkley Manor, Midway Park, and all planned future family housing developments. This can easily be separated by valving off from Hadnot Point proper. Such action would relieve the existing plant of about 1.5 MGD. This area is also located in close proximity to the geological formations which provide the best producing wells on the Base. A new well field to provide the supplemental supply could be developed more economically than at any other area on the Base. A new plant located in the approximate center of demand for the residential area would provide a more reliable distribution within the area particularly with regards to fire protection and to supply future housing developments.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
REVISED 1 OCT 1968			NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-143	WATER TREATMENT PLANT, WELLS AND DISTRIBUTION LINES (BASEWIDE/MISC)

(Cont'd)

h. The line item will provide a new plant in the residential area complete with well field and interconnections with the existing distribution system. This new system should be designed to supply the residential area's demand with reliable flexibility, reinforce the Hadnot Point area and be easily expanded as required to facilitate future demand increases at Hadnot Point proper and the residential area.

i. In consonance with this corrective action this project proposes a 2 MG water treatment plant to be located east of the intersection of Brewster Boulevard and Holcomb Boulevard with its own well field to be located in the Piney Green area, and that plant effluent be interconnected with the existing distribution system at both extremities of Brewster Boulevard and at Berkley Manor. It further proposes that residential area distribution system be isolated from Hadnot Point proper in a manner that will permit each zone to support the other as required. The construction of this line item will relieve the present load upon the Hadnot Point plant and make it capable of supplying the new demand of the before-mentioned new construction.

9. Effects if the New Facility is Not Provided. If the new facility is not provided, the existing Hadnot Point Water Plant cannot be reliably expected to produce the water demanded of it. This would render an unreliable water supply for fire protection, for hospital usage, for heating, industrial usage, and all functions normally dependent upon a sufficiency of water. The adverse effects of a continuing water shortage at this Base, "The Worlds Most Complete Amphibious Training Base," would be intolerable.

10. Justification for the Size and Scope of the New Facility. The areas currently being served by the Hadnot Point Water Plant will have, subsequent to the present planned construction within those areas, an anticipated water demand in excess of 6 MGD. The present plant capacity is 5 MGD leaving a deficit in excess of 1 MGD. Provision of this item would relieve the Hadnot Point Plant of areas demanding approximately 15 MGD and permit that plant to function at approximately its designed capacity. Approval of this item would provide 2 MGD for the areas demanding approximately 1.5 MGD and provide the two plants with a 7 MGD capacity to offset a total demand in excess of 6 MGD. This condition affords very limited flexibility but the new facility will be well adapted for expansion when necessary whereas the existing facility is not. It is essential that the new plant have its own well field because the existing field is already over-taxed and is incapable of supporting the new plant. The new distribution mains are essential to properly provide for fire protection in the residential areas.

11. Justification for the Type of Construction Planned. The lime treatment process was chosen because it affords the most economical means of treating this particular water and it is compatible with the existing system to which it will be interlocked.

12. Alternate Solutions. There are no alternate solutions.

25. REQUIREMENT FOR LINE ITEM

Amphibious training is a primary function of the Marine Corps. Operating expenses will be reduced by locating the 2nd Amtrac Battalion nearer ocean training areas. Roads and utilities are necessary in the development of the Mile Hammock Bay for the 2nd Amtrac Battalion and amphibious training functions. This line item must be approved and funded along with 2nd Amtrac Battalion facilities to provide complete and useable facilities.

DD FORM 1 JUL 62 1391

BOOK NO.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
12 DEC 1968	1973		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE	
P-1007	UTILITIES AND ROADS, MILE HAMMOCK BAY	(BASEWIDE/MISC)

1. Function to be Performed. This line item provides for the roads and utilities in the Mile Hammock Bay area and in connection with the proposed complex for the 2nd Amtrac Battalion.

2. Necessity for Performing This Function. This line item must be approved and funded along with 2nd Amtrac Battalion complex in order that complete and usable facilities will be provided.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function. There are no existing utilities in the Mile Hammock Bay area. The existing read through the area is to be retained and utilized during the first phase of development.

4. Current and Planned Future Workload With Regard to This Function. The 2nd Amtrac Battalion complex in the Mile Hammock Bay area is to house 611 enlisted personnel. The facilities will operate at maximum potential throughout the year. The requested facilities are based on this projected requirement.

5. Description of Construction Being Requested. The requested facilities are to provide the necessary utilities in support of the 2nd Amtrac Battalion complex. The electrical distribution system, water distribution system and sanitary sewer system is to be sized to allow for 100% expansion. Roads shall have a 22 feet wide paved surface with two, 8 feet shoulders, back slopes and side ditches. The road surface shall be 1½ inch asphalted concrete on 4½ inch contacted stone base. Clearing, earthwork and grassing for utilities and roads is also to be provided.

6. List of Collateral Equipment to Be Included in the Line Item. None.

7. List of Collateral Equipment Associated With, but Not Included in, Line Item. None.

8. Justification for the New Facility. Amphibious training operations are primary function of the Marine Corps. Adequate facilities near ocean training areas will reduce present operating expenses. This line item provides for utility services and roads which are required in connection with the development of the 2nd Amtrac Battalion complex. This line item must be approved and funded simultaneously with proposed construction in order to provide complete and usable facilities.

9. Effects if the New Facility is Not Provided. Without these utilities the new facilities to be constructed in the Mile Hammock Bay area will be unoperable.

10. Justification for the Size and Scope of the New Facility. There are no existing utilities in the Mile Hammock Bay area. The sizes of the utility components are based upon 100% expansion of present requirements. If the new facilities are not provided, proposed construction in the area would not be operable.

19. DESCRIPTION OF WORK TO BE DONE

The proposed work includes construction of concrete block revetments over shoreline bluffs in the four areas, as shown in 1391'c. Combined length is to be 2,650 LF with the top elevation approximately 8 to 11 feet above mean sea level. Construction includes placement of a plastic filter cloth over existing bluff material, covered with a layer of crushed rock, over which is laid a finish surface of interlocking concrete blocks of approximately 80 lbs. each. Timber sheet pile walls are to be provided at the toe and lateral extremities of each revetment, with transverse compartmanting at 150 ft intervals. Armor stone will be placed at lateral cutoff walls to prevent undermining.

25. REQUIREMENT FOR LINE ITEM

The U. S. Naval Hospital is located on a peninsula about one mile in length, projecting from the eastern shore of New River. Hospital facilities now occupy practically the entire high ground area which is generally 10 to 20 ft above mean sea level. The problem stems from the continuing erosion of beaches and bluffs along both sides of the peninsula. Development associated with the hospital complex extends to within a few feet of the present bluff line. The bluffs are extremely vulnerable to storm wave action, especially when accompanied by a higher elevation of the river surface due to storm surge or wind setup. If no remedial action is taken, the natural erosive forces, as in the past, will continue to remove beach and bank material and the bluff line will continue to recede well back into the hospital property. In view of this condition, stabilization of the bluffs is required to provide protection for installations sited close to the shore.

19. DESCRIPTION OF WORK TO BE DONE

Provide a central chilled water system for the U. S. Naval Hospital Complex. Build an addition to the existing boiler plant to house the chillers and associated equipment. The building shall be of masonry construction with a steel frame structure, slab-on-grade concrete floor and a built-up insulated roof deck to match the existing structure. A direct buried primary chilled water loop shall be installed to all existing buildings requiring air conditioning.

24. RELATED LINE ITEMS

25. REQUIREMENT FOR LINE ITEM

Air conditioning is authorized when the wet bulb temperature exceeds 67°F. for more than 2,200 hours per year. Camp Lejeune averages 2,898 hours per year that exceeds a 67°F. wet bulb temperature. At present, only a small part of the hospital is air conditioned with window type units and a small chiller. A central station chiller to air condition the entire hospital building and other buildings in the hospital complex is economically feasible because of the diversity factor advantage and because the operating and maintenance cost would be less than that of multi-units in each building. If air conditioning is not provided, recuperating patients of the hospital will have to endure the hot humid conditions that exist. This line item is the 1st increment of the total air conditioning requirement.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
20 JAN 1969	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA
5. LINE ITEM NUMBER		6. LINE ITEM TITLE		
P-988		CENTRAL AIR CONDITIONING (U. S. NAVAL HOSPITAL)		

1. Function to be Performed. Air condition the hospital building and other buildings in the hospital complex that are authorized and require air conditioning.

2. Necessity for Performing This Function. Air conditioning is required because Camp Lejeune, N. C. has an average of 2,898 hours per year that exceed a 67°F. wet bulb temperature.

3. Existing and Authorized Facilities Similar to the Requested Facility That Can Be Used for Performing This Function. N/A.

4. Current and Planned Future Workload With Regard to This Function. Air conditioning is required 24 hours a day and seven days a week for a minimum of 6 months a year.

5. Description of Construction Being Requested. A permanent installation of a central chilled water system will require a permanent building to house the chillers and associated equipment and an underground chilled water piping system to serve each building.

6. List of Collateral Equipment to Be Included in the Line Item. N/A.

7. List of Collateral Equipment Associated With, but Not Included in, Line Item. N/A.

8. Justification for the New Facility. Air conditioning is authorized when a 67°F wet bulb temperature exceeds 2,200 hours per year. Camp Lejeune averages 2,898 hours per year that exceed this temperature. Air conditioning in a hospital is a necessity for the confort of the patients who are being treated and for the attending physicians and staff personnel in order that they might perform their duties efficiently.

9. Effects if the New Facility is Not Provided. Patients and staff personnel would be subjected to hot and humid uncomfortable conditions where controlled environmental conditions is a necessity.

10. Justification for the Size and Scope of the New Facility. A central cooling system is economically feasible because of the total air conditioning requirement of the hospital complex. A diversity factor advantage of a central system will reduce the total air conditioning tonnage requirements and will offer a savings in both operating and maintenance costs over separate air conditioning installations. This line item is the lst increment of the total air conditioning requirement.

11. Justification for the Type of Construction Planned. Air conditioning is authorized when the wet bulb temperature exceeds 67°F. for more than 2,200 hours per year. At Camp Lejeune, an average of 2,898 hours per year exceed this temperature. The necessity for air conditioning in the hospital justifies the permanent installation that is proposed.

1. DATE	2. FISCAL YEAR	MILITARY CONSTRUCTION LINE ITEM DATA (Continued)	3. DEPARTMENT	4. INSTALLATION
20 JAN 1969	1972		NAVY	MARINE CORPS BASE, CAMP LEJEUNE, NORTH CAROLINA

5. LINE ITEM NUMBER	6. LINE ITEM TITLE
P-988	CENTRAL AIR CONDITIONING (U. S. NAVAL HOSPITAL)

12. Alternate Solutions. The alternate solution to install separate air conditioning systems for each building would not be as economical to operate and maintain as a central system.

13. Plans for Facilities Being Replaced. N/A.

14. Status of Preliminary Engineering. Preliminary engineering report has not been started.

15. Sketch Showing Planned Location of the New Facility. None.

16. Other Graphic Presentations, Including Photographs. N/A.

17. Activities Without Potential Flood Hazards. Requirements of Executive Order No. 11296 (Flood Hazards) are not applicable.

18. Pollution Abatement, Prevention and Control. This item will not cause additional air and water pollution.
