11560 Great Oaks Way, Suite 500
Alpharetta, GA 30022-2424

Dear Mr. Dunn:

As requested by Dave Lown, Division of Waste Management, Superfund Section, the Division of Water Quality, Groundwater Section's Underground Injection Control Group has reviewed the draft work plan for a Dye Trace Study, received on November 16, 1999. The work plan and subsequent submittals meet state regulatory requirements (15A NCAC 2C.0200) to construct and operate one well for the purpose of injecting a dye at Site 35, Marine Corps Base Camp Lejeune, in Onslow County, North Carolina.

The Groundwater Section staff has noted that the subject work plan offers a limited detail on the type of dye to be used and the well construction specification. However, during our phone conversation on November 30, 1999 you stated that a final work plan with these specifications would be submitted. Please submit the final work plan to the UIC Program before you initiate the injection process.

Due to the incident's listing as a federal CERCLA site, the state's administrative permitting requirements have been waived for this project. A well abandonment form (GW-30), which is enclosed, should be submitted upon completion of the injection project along with a technical report summarizing the project and including monitoring data. If you have any questions regarding this letter please contact me at (919) 715-6165.

Sincerely,

Amy Axon, Manager
Underground Injection Control Program
