D. UST Information

Tank No.	Installation Date	Size in Gallon	Tank Dimension	Last Content
LCH 4034-1	April 1992	10,000	31'6" x 7'6"	Gasoline
LCH 4034-2	April 1992	10,000	31'6" x 7'6"	Gasoline
LCH 4034-3	April 1992	2,500	13'6" x 6'	Gasoline

E. Site Characteristics

1. Describe any past release at this site:

A release had been reported on April 7, 1998, which occurred at UST LCH 4034-2 due to damages on fill port by a contractor. The amount of gasoline release is unknown.

2. Is the facility active or inactive at this time? If the facility is inactive note the last time the USTs were in operation:

The facility is active. Three ASTs were constructed to replace the subject USTs. The last time the USTs were in operation was 04/30/2002.

3. Describe surrounding property use (for example, residential, commercial, farming, etc.):

The site is in a housing area of a military base. The USTs supplied fuel to gasoline dispensers of a seven-day store. On the south of the store is North Carolina Highway 24 and on the north, east and northwest are house areas.

4. Describe site geology/hydrogeology:

The site lies within the Tidewater region of Coastal Plain Physiographic Province of North Carolina, where large streams and many of their tributaries are affected by ocean tides. The predominant soil type at the site is sandy silt to clayey silt of Quaternary surficial deposits. The depth to the underlain

Tertiary Castle Hayne limestone/sand is unknown. The depth-to-water was 5.69 feet below land surface (bls) as measured on May 2, 2002, at a groundwater monitoring well MW-3, which is located approximately 10 feet from the south edge of the UST excavation (See Site Drawing). The nearest surface water body is Northeast Creek, a tributary of New River, which is approximately 5,400 feet from the site. Groundwater flow direction in the surficial aquifer is assumed towards the creek. There is a water supply well located approximately 1,500 feet east of Building LCH 4034. All buildings in this area are supplied by a public water supply system.

II. Closure Procedures

A. Describe preparations for closure including the steps taken to notify authorities, permits obtained, and the steps taken to clean and purge the tanks:

A GW/UST-3 form was submitted to the Environmental Management Division of the Base on 4/25/2002. A copy of the GW/UST-3 form is included in Appendix B. The fuel was transferred into the newly installed ASTs. The tanks were cleaned by removal contractor using a high-pressure washer. The contaminated water so generated was transported and disposed of by Southeast Response & Remediation of Wilmington, North Carolina.

B. Note the amount of residual material pumped from the tank(s):

There was no residual material in the tank.

C. Describe the storage, sampling, and disposal of the residual material:

N/A

D. Excavation

1. Describe excavation procedures noting the condition of the soils and the dimensions of the excavation in relation to the tanks, piping and/or pumps:

The three fiberglass tanks were set in an ABC gravel basin. After the USTs were removed from the excavation, soil discoloration and petroleum odor were observed on the excavation walls. The final dimensions of the excavation were 39' (L) x 34' (W) x 11' (D).

Following the USTs removal, the product lines that were associated with the UST system were removed next day, May 1, 2002. Only a small portion of the product lines, approximately 14 feet, remains underground as indicated in Site Drawing. This portion of the product lines is sealed at both ends with cement.

During the product line trench excavation, free product was observed on groundwater surface in the east-west section of the trench (Photo 6), which is parallel to the south edge of Building LCH-4034. The depth-to-water in the trench is approximately 2.5 feet, which indicates the water table of a local perched aquifer.

2. Note the depth of tank burial(s) (from land surface to top of tank):

3.5 feet

3. Quantity of soil removed:

Approximately 180 cubic yards of ABC gravel were excavated to expose the tank.

4. Describe soil type(s):

Based on field observation on the excavation walls, the native soil appears dark brown to dark gray sandy silt to clayey silt with thin clay layers.

5. Type and source of backfill used:

Common fill (sand) obtained from a borrow pit in the base was used as backfill.

E. Contaminated Soil

ABC gravel/soil within the excavation extent was excavated down to groundwater table. Approximately 73 tons of contaminated soil/gravel were transported off site and disposed of at a licensed remediation facility operated by ES&J Enterprises, Inc., Autryville, North Carolina. A copy of the Non-Hazardous Waste Manifests is included in Appendix D.

III. Site Investigation

A. Provide information on field screening and physical observations, including methods used to calibrate field screening instrument(s):

Soil discoloration and petroleum odor were observed on ABC gravel in the excavation. Free product was observed only in the product line excavation trench, not in the UST excavation.

B. Describe soil sampling points and sampling procedures used:

A total of 9 soil/gravel samples were collected during the tank and product lines removal activities.

Four samples (ID# LCH-4034-1 through LCH-4034-4) were collected from walls of the UST excavation, at approximate depth of 5 ft below land surface (bls), several inches above groundwater table in the excavation. Two samples (ID#LCH4034-P-4 and LCH4034-P-5) were collected on the bottom of the product line trench excavation, at a depth of 2.5 ft bls. These 6 samples were tested using EPA Methods 8260, 8270 for volatile and semi-volatile compounds, respectively. They were also tested for volatile petroleum hydrocarbons (VPH) and extractable petroleum hydrocarbons (EPH) by using MADEP VPH and EPH methods, respectively.

Samples LCH4034-P-2 and LCH4034-P-3 were each collected beneath a product dispenser and LCH4034-P-1 was taken between the dispensers. These samples were tested using EPA Method 5030 for TPH-GRO.

The location and the depth of the soil/gravel samples are illustrated in Site Drawing.

C. Describe groundwater or surface water sampling procedures used:

Groundwater was encountered in the UST excavation. The water stands at approximately 5 feet bls. No groundwater samples were collected from the excavation, which is within the extent of an active environmental remediation system. Several groundwater monitoring wells are in the vicinity of the excavation and have undergone a routine monitoring program (EPA Methods 602 and 610). A copy of analytical results for groundwater samples collected at monitoring well MW-3, which is approximately 10 feet from the excavation's south edge, during February 2002 and May 2002 sampling events is included in Appendix F for references.

D. Quality control measures;

Lab-provided containers and dedicated disposable gloves were used for sampling. Upon collection, the samples were stored in a cooler, chilled by ice, and sent to the laboratory through an over-night carrier.

E. Investigation results

When removed, the tanks were in good conditions (Photo 3, 4, 5). However, soil discoloration and petroleum odor observed in the excavation.

The analytical results of soil are summarized in the tables below. Table 1 lists the analytical results of samples LCH4034-P-1 through LCH4034-P-3, which were taken beneath the fuel dispensers. TPH-GRO concentration in all 3 samples is below the detection limit. Table 2 lists the analytical results of samples LCH4034-1 through LCH4034-4, LCH4034-P-4 and LCH4034-P-5, which underwent constituent-specific tests. As indicated in the table, several target compounds are detected at concentration above the corresponding method detection limit in samples LCH4034-1, LCH4034-2, LCH4034-4, LCH4034-P-4, and LCH4034-P-5. Among the compounds detected, C9-C22 aromatics, Naphthalene, N-propylbenzene, 1,2,4-trimethylbenzene and benzene are in a concentration above Residential Soil Cleanup Level established by NCDENR in sample LCH4034-P-4, which was collected on the bottom wall of the east-west section of the product line excavation trench where free product was observed.

Table 3 lists the analytical results of groundwater samples collected at monitoring well MW-3 during February 2002 and May 2002 routine sampling events. As indicated, benzene, ethylbenzene, MTBE, xylenes, naphthalene, and 1-methylnaphthalene are detected in the groundwater samples in concentration above NCDENR regulatory limit but below Gross Contamination Level.

A copy of lab analytical reports of soil and groundwater is included in Appendix F.

IV. Conclusions and Recommendations

Field observation and analytical results of soil and groundwater samples indicate petroleum product contamination on soil and groundwater. Also, free phase of product exists in area south of, and possibly underneath, Building LCH-4034. It is recommended to investigate the free phase product plume and expand the existing soil/groundwater remediation system accordingly to recover free phase product.
