**Subject:** Gottschalk (Bldg 728)

Hi Andrew:

We received your letter concerning the fence today. This incident is now ready for closure, pending receipt and approval of a LUCAP. I will add this incident site to "the stack".

Regards,

Bruce

Subject: Review of Site Documentation  
USMC-Camp Lejeune-Bldg. UST-728  
Incident No. Pending  
Camp Lejeune, Onslow County  
*(Gottschalk Marina)*

Dear Ms. Hall:

Thank you for providing site documentation to this office on August 11, 1999. After reviewing information relating to this incident, the UST Section needs the following information to consider closure of this UST incident:

1. Soil samples from the south, east, and west sides of the former tank basin, as well as the tank basin itself (as the closure report stated that impacted soils were placed back into the basin), are needed to confirm that soil contamination does not exist at the former tank area. It is important that these soil samples are obtained from above the capillary-fringe area of the subsurface.
2. Since a monitoring well was not constructed in the tank basin and no statement concerning the possible presence of free-product was found in the tank closure report, please provide additional information that resolves the free-product issue.

After this information is received, we can complete the closure review of this incident. The Division suggests that Camp Lejeune contact David Lown at the Division's Raleigh Central Office for his comments pertaining to the paint-shed incident. Thank you for your continued cooperation in conjunction with this site. If you have any questions concerning this letter, please contact me at (910) 395-3900.

Sincerely,

Bruce Reed  
Hydrogeologist II
