Subject: AS-4159-2/2 LSA, Incident No. 32277

Hi Andrew:

From review of the subject LSA, it appears that this incident can be closed out with a NRP (site is low-risk). Groundwater contamination exists, and soil is below ind./comm. I will place this report in the stack. The Base should report the chlordane detections in soil to the Dept. of Agriculture.

Thanks,

Bruce Reed
