Wilmington, North Carolina 28405-3845

Dear Mr. Reed:

This document contains details associated with soil removal actions at buildings PP-3326, PP-3330, PP-3332, PP-3350 and M-230. These sites are located within the Paradise Point and Camp Johnson areas aboard Marine Corps Base, Camp Lejeune, North Carolina.

Confirmatory soil analyses showed that residential limits were exceeded at the various locations described. We propose the following actions at each site:

PP-3326, PP-3330, PP-3332, and PP-3350: Re-excavate soils at locations exceeding residential MSCCs with the exception of the locations adjacent to the house foundations.

M230: Since soil contamination is at depth (11'), we are evaluating several technologies applicable to this particular case. We would like to further discuss this site with you at the upcoming partnering meeting to be held on February 24, 2005 at Camp Lejeune.

Please review the enclosed document and provide comments as necessary. If you have additional questions or need further information, contact Ms. Nikki Hall, Environmental Quality Branch, Environmental Management Division, Installations and Environment Department, at (910) 451-9610.

Sincerely,

SCOTT A. BREWER, PE  
Director, Environmental Management  
By direction of  
the Commanding General
