RE: Update on Environmental Monitoring Data Reporting
Requirements

Dear Ms. Boucher:

Enclosed please find software and documentation to assist your facility in complying with the EPA's Locational Data Policy, per our April 8, 1991, letter. This software provides a method for inputting data into the Interchange File Format (IFF). The IFF will satisfy EPA's Locational Data Policy requirements.

Both because of the dynamic nature of implementing such a large scale program, and because of the large number of potential users, EPA anticipates several iterations of the IFF over the next several years. However, these changes should be global in nature, which should limit the amount of restructuring required by facilities.

EPA is aware of the interest in standardized environmental data reporting formats, both because of the obvious need to initiate such standardization and also because of the extensive amount of work that many facilities have already expended in this area. To facilitate discussion and prevent unnecessary duplication of effort, EPA is in the formative stages of convening a meeting to discuss the IFF and other input formats for standardizing reporting of environmental investigation data, and to explore the future of electronic data management, especially as it relates to federal facilities environmental restoration programs. We will provide more information on the meeting as soon as possible.

Please provide a response indicating your projected schedule for complying with data submission via the IFF. Your response should be sent to my office c/o Richard Hammond. If you have any questions concerning information in this letter, please contact Richard Hammond of my staff at (404) 347-3016 or FTS 257-3016.

Sincerely yours,

Michael J. Hutault

for James H. Scarbrough, P.E., Chief
RCRA & Federal Facilities Branch
Waste Management Division

INTERCHANGE FILE FORMAT

Introduction

Since introducing the Interchange File Format (IFF) earlier this year, we have run several sets of test data to calibrate the IFF and to determine problems. The enclosed update is being issued to clarify certain aspects of the IFF. As stated in the cover letter, we anticipate a meeting to discuss the IFF and to solicit comment on the IFF.

File Names

EPA has designed a file name designation scheme that provides sufficient information to allow proper storage and retrieval of multiple site files at EPA. This scheme was designed to accommodate a large variety of site types. Discussions between individual facilities and EPA will provide additional guidance for assigning values to the file designators for that site.

There are four datafile types defined in the IFF:

STATION.DAT
SAMPLE.DAT
PARAM.DAT
WELL.DAT

Based on the eight character restrictions (plus three characters for the extension) placed on the length of filenames by DOS, the following file name scheme should be utilized. The number 0 has been selected as the null or "not applicable" symbol.

FILE NAME CODE

5 E _____ . _____

1 2 3 4 5 6 7 8 . extention

1-2: Site Identifier - Two place alphanumeric code defined by EPA.

3: Sub-site Identifier - This space identifies sub-sites within the larger site, if applicable.

4: WAG or Area Identifier - This space identifies specific areas within the site or sub-site.

5: Operable Unit or SWMU - This space identifies specific operable unit or SWMU within an area.

6: Fiscal Year - 1991 will be represented with the number 1.

7: Quarter - 1st through 4th quarters of fiscal year.

8: Submission # for Quarter - Facility assigned, and consecutively numbered by submission.

Space 3, space 4, space 5, and space 8 will use the following priority scheme:

Numeric symbols 1 through 9 will be utilized in order first. If additional identifiers are required, the alpha symbols A through Z will be utilized in order. Therefore, A has a value of 10, B has a value of 11, etc. This will provide for 35 values to be designated in these single spaces, should the need arise.
