Re: Technical Review Committees

Dear Mr. Wilms:

In accordance with SARA Section 211, we are establishing technical review committees to review and comment on our efforts under the Installation Restoration (IR) program. We are currently conducting an RI/FS at two installations in North Carolina: Marine Corps Base, Camp Lejeune and Marine Corps Air Station, Cherry Point. We request you designate a representative to these committees at this time. This representative should be able to review our reports in a timely manner and attend committee meetings at or near each installation.

SARA also mandates increased state involvement at both NPL and non-NPL sites. We envision your representative acting as the point-of-contact for your agency for determining potential ARARs, identifying state laws concerning removal and remedial actions, and otherwise fulfilling SARA requirements for consultation and coordination.

Please have your representative notify us by January 1, 1988 so we may initiate the review process for Camp Lejeune and Cherry Point. Our point of contact is Cheryl Barnett, (804) 445-1814.

Sincerely,

J. R. BAILEY, P.E.  
Head, Environmental Quality Branch  
Utilities, Energy and Environmental  
Division  
By direction of the Commander
