RE: NC Superfund Section Comments  
Basis of Design Site 85  
The Camp Johnson Battery Dump  
MCB Camp Lejeune, North Carolina

Dear Ms. Montegross:

The referenced document has been received and reviewed by the North Carolina Superfund Section. We submit the following comment:

Page 2-3, Clean Up Goals. If metals are contaminating the groundwater to levels above the North Carolina groundwater standards, then the following generic screening levels should be used to determine clean up levels:

Metal (mg/kg)	
Al	Not Established
Cd	2.72
Cr	27.2
Fe	151
Pb	270
Mn	65.2
Hg	.0154
Ni	56.4
Zn	1100

NC Superfund Comments  
Draft Basis of Design  
Remediation of Site 85  
The Camp Johnson Battery Dump  
Page 2

These levels were derived using the EPA Soil Screening Guidance using generic information for North Carolina. A discussion of the North Carolina generic information can be found in the North Carolina Risk Analysis Framework. Please call me at (919) 733-2801, extension 278 if you have any questions.

Sincerely,

A handwritten signature in black ink that reads "David J. Lown". The signature is written in a cursive style with a large, stylized "D" and "L".

David J. Lown, LG, PE  
Geological Engineer  
Superfund Section
