Subj: INSTALLATION RESTORATION SITE #41

1. Operable Unit #4, which is composed of Installation Restoration Sites #69 and #74, is a collection of sites which possibly contain chemical surety agents. This grouping was initiated in 1992 due to the Rifle Range Chemical Dump (Site #69) and the Mess Hall Grease Disposal Area (Site #74) potentially containing buried chemical surety materials.

2. According to the March 1983 Initial Assessment Study of Marine Corps Base, Camp Lejeune, certain wastes deposited at Site #41 were "described as being similar to those disposed of at the Rifle Range Chemical Landfill" (Site #69). Although the classification of the respective material is uncertain, the possibility of buried chemical surety agents at Site #41 exists. As a result, it is requested that this site be included in Operable Unit #4. This will not only expedite investigation and remediation, but it will also insure our future compliance with the Chemical Weapons Compliance Treaty of 1995.

3. If you have any questions or comments, please contact Mr. Neal Paul, Director, Installation Restoration Division, Environmental Management Department, at (919) 451-5003.

ROBERT L. WARREN
