SUBJECT: Camp Lejeune
Operable Unit #2
Onslow County

The Division of Environmental Management has completed the review of the subject document and offers the following comments and recommendations.

Air Quality Section

The Air Quality Section has no comments on the report.

Water Quality Section

The Water Quality staff has reviewed the draft work plan provided for the subject facility. Of the primary concern is the lack of detailed information relative to the final disposition of the wastewater to be generated at the site. It is important to note that wastewater from this activity cannot be simply released into the wastewater treatment facilities for Camp Lejeune. Prior to undertaking any such action; it will be necessary for the Base to apply for and receive from the Division an amendment to the NPDES Permit which would authorize the introduction of the additional waste stream.

When final information is submitted relative to the disposal of the wastewater to be generated at the remediation site; additional comment will be provided.

Groundwater Section

The Groundwater Section has no comments on the report.

If you have additional questions, please advise.
