Mr. Patrick Watters, NCDEHNR

Comments

1. part II, page 4-6, Solids Handling

Random samples should be taken of the solids before shipping to the municipal landfill. This action will verify that the material is not hazardous.

2. Data Level III

The use of data level III data is acceptable if the lab being used is a fixed base lab that uses the CLP methods. Also, they must be able to produce the necessary paper work to define the data if needed at a later date.

3. part III, page 3-13, Contaminated Materials Handling Plan

If drums are being labeled "potentially hazardous" what actions will take place to verify the actual status of the contents. This needs to be determined before it is shipped to a solid waste landfill.
